# Welcome

Amazon GuardDuty is a continuous security monitoring service that analyzes and processes the following foundational data sources – VPC flow logs, AWS CloudTrail management event logs, CloudTrail S3 data event logs, EKS audit logs, DNS logs, Amazon EBS volume data, runtime activity belonging to container workloads, such as Amazon EKS, Amazon ECS (including AWS Fargate), and Amazon EC2 instances. It uses threat intelligence feeds, such as lists of malicious IPs and domains, and machine learning to identify unexpected, potentially unauthorized, and malicious activity within your AWS environment. This can include issues like escalations of privileges, uses of exposed credentials, or communication with malicious IPs, domains, or presence of malware on your Amazon EC2 instances and container workloads. For example, GuardDuty can detect compromised EC2 instances and container workloads serving malware, or mining bitcoin.

GuardDuty also monitors AWS account access behavior for signs of compromise, such as unauthorized infrastructure deployments like EC2 instances deployed in a Region that has never been used, or unusual API calls like a password policy change to reduce password strength.

GuardDuty informs you about the status of your AWS environment by producing security findings that you can view in the GuardDuty console or through Amazon EventBridge. For more information, see the [Amazon GuardDuty User Guide](#).

This document was last published on July 24, 2025.

# Actions

The following actions are supported:

- [AcceptAdministratorInvitation](#)
- [AcceptInvitation](#)
- [ArchiveFindings](#)
- [CreateDetector](#)
- [CreateFilter](#)
- [CreateIPSet](#)
- [CreateMalwareProtectionPlan](#)
- [CreateMembers](#)
- [CreatePublishingDestination](#)

# AcceptAdministratorInvitation

Accepts the invitation to be a member account and get monitored by a GuardDuty administrator account that sent the invitation.

## Request Syntax

```
POST /detector/detectorId/administrator HTTP/1.1
Content-type: application/json

{
  "administratorId": "string",
  "invitationId": "string"
}
```

## URI Request Parameters

The request uses the following URI parameters.

### detectorId

The unique ID of the detector of the GuardDuty member account.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

### administratorId

The account ID of the GuardDuty administrator account whose invitation you're accepting.

Type: String

Required: Yes

### invitationId

The value that is used to validate the administrator account to the member account.

Type: String

Required: Yes

## Response Syntax

HTTP/1.1 200

## Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### BadRequestException

A bad request exception object.

HTTP Status Code: 400

### InternalServerErrorException

An internal server error exception object.

HTTP Status Code: 500

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS Command Line Interface](#)
- [AWS SDK for .NET](#)

# AcceptInvitation

*This action has been deprecated.*

Accepts the invitation to be monitored by a GuardDuty administrator account.

## Request Syntax

```
POST /detector/detectorId/master HTTP/1.1
Content-type: application/json

{
  "invitationId": "string",
  "masterId": "string"
}
```

## URI Request Parameters

The request uses the following URI parameters.

### detectorId

The unique ID of the detector of the GuardDuty member account.

To find the detectorId in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

### invitationId

The value that is used to validate the administrator account to the member account.

Type: String

Required: Yes

### **masterId**

The account ID of the GuardDuty administrator account whose invitation you're accepting.

Type: String

Required: Yes

## Response Syntax

HTTP/1.1 200

## Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

### **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS Command Line Interface](#)
- [AWS SDK for .NET](#)

- [AWS SDK for C++](#)
- [AWS SDK for Go v2](#)

- [AWS SDK for Ruby V3](#)

# ArchiveFindings

Archives GuardDuty findings that are specified by the list of finding IDs.

## Note

Only the administrator account can archive findings. Member accounts don't have permission to archive findings from their accounts.

## Request Syntax

```
POST /detector/detectorId/findings/archive HTTP/1.1
Content-type: application/json

{
    "findingIdsstring" ]
}
```

## URI Request Parameters

The request uses the following URI parameters.

### detectorId

The ID of the detector that specifies the GuardDuty service whose findings you want to archive.

To find the `detectorId` in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

### findingIds

The IDs of the findings that you want to archive.

Type: Array of strings

Array Members: Minimum number of 0 items. Maximum number of 50 items.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Response Syntax

HTTP/1.1 200

## Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### BadRequestException

A bad request exception object.

HTTP Status Code: 400

### InternalServerErrorException

An internal server error exception object.

HTTP Status Code: 500

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS Command Line Interface](#)
- [AWS SDK for .NET](#)
- [AWS SDK for C++](#)

- [AWS SDK for Java V2](#)
- [AWS SDK for JavaScript V3](#)
- [AWS SDK for Kotlin](#)
- [AWS SDK for PHP V3](#)
- [AWS SDK for Python](#)
- [AWS SDK for Ruby V3](#)

## CreateDetector

Creates a single GuardDuty detector. A detector is a resource that represents the GuardDuty service. To start using GuardDuty, you must create a detector in each Region where you enable the service. You can have only one detector per account per Region. All data sources are enabled in a new detector by default.

- When you don't specify any features, with an exception to RUNTIME\_MONITORING, all the optional features are enabled by default.
- When you specify some of the features, any feature that is not specified in the API call gets enabled by default, with an exception to RUNTIME\_MONITORING.

Specifying both EKS Runtime Monitoring (EKS\_RUNTIME\_MONITORING) and Runtime Monitoring (RUNTIME\_MONITORING) will cause an error. You can add only one of these two features because Runtime Monitoring already includes the threat detection for Amazon EKS resources. For more information, see [Runtime Monitoring](#).

There might be regional differences because some data sources might not be available in all the AWS Regions where GuardDuty is presently supported. For more information, see [Regions and endpoints](#).

## Request Syntax

```
POST /detector HTTP/1.1
Content-type: application/json

{
  "clientToken": "string",
  "dataSources": {
    "kubernetes": {
      "auditLogs": {
        "enable": boolean
      }
    },
    "malwareProtection": {
      "scanEc2InstanceWithFindings": {
        "ebsVolumes": boolean
      }
    },
    "s3Logs": {
      "logFile": "string"
    }
  }
}
```

```
        "enable": boolean
    }
},
"enable": boolean,
"features": [
    {
        "additionalConfiguration": [
            {
                "name": "string",
                "status": "string"
            }
        ],
        "name": "string",
        "status": "string"
    }
],
"findingPublishingFrequency": "string",
"tags": {
    "string" : "string"
}
}
```

## URI Request Parameters

The request does not use any URI parameters.

## Request Body

The request accepts the following data in JSON format.

### [clientToken](#)

The idempotency token for the create request.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 64.

Required: No

### [dataSources](#)

*This parameter has been deprecated.*

Describes which data sources will be enabled for the detector.

There might be regional differences because some data sources might not be available in all the AWS Regions where GuardDuty is presently supported. For more information, see [Regions and endpoints](#).

Type: [DataSourceConfigurations](#) object

Required: No

### **enable**

A Boolean value that specifies whether the detector is to be enabled.

Type: Boolean

Required: Yes

### **features**

A list of features that will be configured for the detector.

Type: Array of [DetectorFeatureConfiguration](#) objects

Required: No

### **findingPublishingFrequency**

A value that specifies how frequently updated findings are exported.

Type: String

Valid Values: FIFTEEN\_MINUTES | ONE\_HOUR | SIX\_HOURS

Required: No

### **tags**

The tags to be added to a new detector resource.

Type: String to string map

Map Entries: Maximum number of 200 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: ^(?!aws:)[a-zA-Z+-=.\_:/]+\$

Value Length Constraints: Maximum length of 256.

Required: No

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
  "detectorId": "string",
  "unprocessedDataSources": {
    "malwareProtection": {
      "scanEc2InstanceWithFindings": {
        "ebsVolumes": {
          "reason": "string",
          "status": "string"
        }
      },
      "serviceRole": "string"
    }
  }
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### [detectorId](#)

The unique ID of the created detector.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

### [unprocessedDataSources](#)

Specifies the data sources that couldn't be enabled when GuardDuty was enabled for the first time.

Type: [UnprocessedDataSourcesResult](#) object

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### BadRequestException

A bad request exception object.

HTTP Status Code: 400

### InternalServerErrorException

An internal server error exception object.

HTTP Status Code: 500

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS Command Line Interface](#)
- [AWS SDK for .NET](#)

- [AWS SDK for JavaScript V3](#)
- [AWS SDK for Kotlin](#)
- [AWS SDK for PHP V3](#)
- [AWS SDK for Python](#)
- [AWS SDK for Ruby V3](#)

## CreateFilter

Creates a filter using the specified finding criteria. The maximum number of saved filters per AWS account per Region is 100. For more information, see [Quotas for GuardDuty](#).

### Request Syntax

```
POST /detector/detectorId/filter HTTP/1.1
Content-type: application/json

{
    "action": "string",
    "clientToken": "string",
    "description": "string",
    "findingCriteria": {
        "criterion": {
            "string" : {
                "eq": [ "string" ],
                "equals": [ "string" ],
                "greaterThan": number,
                "greaterThanOrEqual": number,
                "gt": number,
                "gte": number,
                "lessThan": number,
                "lessThanOrEqual": number,
                "lt": number,
                "lte": number,
                "neq": [ "string" ],
                "notEquals": [ "string" ]
            }
        }
    },
    "name": "string",
    "rank": number,
    "tags": {
        "string" : "string"
    }
}
```

### URI Request Parameters

The request uses the following URI parameters.

## detectorId

The detector ID associated with the GuardDuty account for which you want to create a filter.

To find the `detectorId` in the current Region, see the [Settings page](#) in the GuardDuty console, or run the [`ListDetectors`](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## **Request Body**

The request accepts the following data in JSON format.

### action

Specifies the action that is to be applied to the findings that match the filter.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

Valid Values: NOOP | ARCHIVE

Required: No

### clientToken

The idempotency token for the create request.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 64.

Required: No

### description

The description of the filter. Valid characters include alphanumeric characters, and special characters such as hyphen, period, colon, underscore, parentheses ({ }, [ ], and ( )), forward slash, horizontal tab, vertical tab, newline, form feed, return, and whitespace.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 512.

Required: No

## [findingCriteria](#)

Represents the criteria to be used in the filter for querying findings.

You can only use the following attributes to query findings:

- accountId
- id
- region
- severity

To filter on the basis of severity, the API and AWS CLI use the following input list for the [FindingCriteria](#) condition:

- **Low:** ["1", "2", "3"]
- **Medium:** ["4", "5", "6"]
- **High:** ["7", "8"]
- **Critical:** ["9", "10"]

For more information, see [Findings severity levels](#) in the *Amazon GuardDuty User Guide*.

- type
- updatedAt

Type: ISO 8601 string format: YYYY-MM-DDTHH:MM:SS.SSSZ or YYYY-MM-DDTHH:MM:SSZ depending on whether the value contains milliseconds.

- resource.accessKeyDetails.accessKeyId
- resource.accessKeyDetails.principalId
- resource.accessKeyDetails.userName
- resource.accessKeyDetails.userType
- resource.instanceDetails.iamInstanceProfile.id
- resource.instanceDetails.imageId
- resource.instanceDetails.instanceId
- resource.instanceDetails.tags.key
- resource.instanceDetails.tags.value

- resource.instanceDetails.networkInterfaces.ipv6Addresses
- resource.instanceDetails.networkInterfaces.privateIpAddresses.privateIpAddress
- resource.instanceDetails.networkInterfaces.publicDnsName
- resource.instanceDetails.networkInterfaces.publicIp
- resource.instanceDetails.networkInterfaces.securityGroups.groupId
- resource.instanceDetails.networkInterfaces.securityGroups.groupName
- resource.instanceDetails.networkInterfaces.subnetId
- resource.instanceDetails.networkInterfaces.vpcId
- resource.instanceDetails.outpostArn
- resource.resourceType
- resource.s3BucketDetails.publicAccess.effectivePermissions
- resource.s3BucketDetails.name
- resource.s3BucketDetails.tags.key
- resource.s3BucketDetails.tags.value
- resource.s3BucketDetails.type
- service.action.actionType
- service.action.awsApiCallAction.api
- service.action.awsApiCallAction.callerType

- resource.rdsDbInstanceDetails.engine
- resource.rdsDbUserDetails.user
- resource.rdsDbInstanceDetails.tags.key
- resource.rdsDbInstanceDetails.tags.value
- service.runtimeDetails.process.executableSha256
- service.runtimeDetails.process.name
- service.runtimeDetails.process.executablePath
- resource.lambdaDetails.functionName
- resource.lambdaDetails.functionArn
- resource.lambdaDetails.tags.key
- resource.lambdaDetails.tags.value

Type: [FindingCriteria object](#)

Required: Yes

#### [name](#)

The name of the filter. Valid characters include period (.), underscore (\_), dash (-), and alphanumeric characters. A whitespace is considered to be an invalid character.

Type: String

Length Constraints: Minimum length of 3. Maximum length of 64.

Required: Yes

## rank

Specifies the position of the filter in the list of current filters. Also specifies the order in which this filter is applied to the findings.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

## tags

The tags to be added to a new filter resource.

Type: String to string map

Map Entries: Maximum number of 200 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: ^(?!aws:)[a-zA-Z+-=.\_:/]+\$

Value Length Constraints: Maximum length of 256.

Required: No

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
    "name": "string"
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

## [name](#)

The name of the successfully created filter.

Type: String

Length Constraints: Minimum length of 3. Maximum length of 64.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

### **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

## See Also

## CreateIPSet

Creates a new IPSet, which is called a trusted IP list in the console user interface. An IPSet is a list of IP addresses that are trusted for secure communication with AWS infrastructure and applications. GuardDuty doesn't generate findings for IP addresses that are included in IPSets. Only users from the administrator account can use this operation.

### Request Syntax

```
POST /detector/detectorId/ipset HTTP/1.1
Content-type: application/json

{
    "activate": boolean,
    "clientToken": "string",
    "expectedBucketOwner": "string",
    "format": "string",
    "location": "string",
    "name": "string",
    "tags": {
        "string": "string"
    }
}
```

### URI Request Parameters

The request uses the following URI parameters.

#### [detectorId](#)

The unique ID of the detector of the GuardDuty account for which you want to create an IPSet.

To find the `detectorId` in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

### activate

A Boolean value that indicates whether GuardDuty is to start using the uploaded IPSet.

Type: Boolean

Required: Yes

### clientToken

The idempotency token for the create request.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 64.

Required: No

### expectedBucketOwner

The AWS account ID that owns the Amazon S3 bucket specified in the **location** parameter.

Type: String

Length Constraints: Fixed length of 12.

Required: No

### format

The format of the file that contains the IPSet.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

Valid Values: TXT | STIX | OTX\_CSV | ALIEN\_VAULT | PROOF\_POINT | FIRE\_EYE

Required: Yes

### location

The URI of the file that contains the IPSet.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

### [name](#)

The user-friendly name to identify the IPSet.

Allowed characters are alphanumeric, whitespace, dash (-), and underscores (\_).

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

### [tags](#)

The tags to be added to a new IP set resource.

Type: String to string map

Map Entries: Maximum number of 200 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: ^(?!\aws:)[a-zA-Z+-.=:\_:/]+\$

Value Length Constraints: Maximum length of 256.

Required: No

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
    "ipSetId": "string"
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### ipSetId

The ID of the IPSet resource.

Type: String

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **AccessDeniedException**

An access denied exception object.

HTTP Status Code: 403

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

### **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

# CreateMalwareProtectionPlan

Creates a new Malware Protection plan for the protected resource.

When you create a Malware Protection plan, the AWS service terms for GuardDuty Malware Protection apply. For more information, see [AWS service terms for GuardDuty Malware Protection](#).

## Request Syntax

```
POST /malware-protection-plan HTTP/1.1
Content-type: application/json

{
  "actions": {
    "tagging": {
      "status": "string"
    }
  },
  "clientToken": "string",
  "protectedResource": {
    "s3Bucket": {
      "bucketName": "string",
      "objectPrefixes": [ "string" ]
    }
  },
  "role": "string",
  "tags": {
    "string" : "string"
  }
}
```

## URI Request Parameters

The request does not use any URI parameters.

## Request Body

The request accepts the following data in JSON format.

### actions

Information about whether the tags will be added to the S3 object after scanning.

Type: [MalwareProtectionPlanActions](#) object

Required: No

### [\*\*clientToken\*\*](#)

The idempotency token for the create request.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 64.

Required: No

### [\*\*protectedResource\*\*](#)

Information about the protected resource that is associated with the created Malware Protection plan. Presently, S3Bucket is the only supported protected resource.

Type: [CreateProtectedResource](#) object

Required: Yes

### [\*\*role\*\*](#)

Amazon Resource Name (ARN) of the IAM role that has the permissions to scan and add tags to the associated protected resource.

Type: String

Required: Yes

### [\*\*tags\*\*](#)

Tags added to the Malware Protection plan resource.

Type: String to string map

Map Entries: Maximum number of 200 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: ^(?!aws:)[a-zA-Z+=\_,:\_:/]+\$

Value Length Constraints: Maximum length of 256.

Required: No

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
    "malwareProtectionPlanId
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### [\*\*malwareProtectionPlanId\*\*](#)

A unique identifier associated with the Malware Protection plan resource.

Type: String

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **AccessDeniedException**

An access denied exception object.

HTTP Status Code: 403

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

### **ConflictException**

A request conflict exception object.

HTTP Status Code: 409

## InternalServerErrorException

An internal server error exception object.

HTTP Status Code: 500

## CreateMembers

Creates member accounts of the current AWS account by specifying a list of AWS account IDs. This step is a prerequisite for managing the associated member accounts either by invitation or through an organization.

As a delegated administrator, using `CreateMembers` will enable GuardDuty in the added member accounts, with the exception of the organization delegated administrator account. A delegated administrator must enable GuardDuty prior to being added as a member.

When you use `CreateMembers` as an AWS Organizations delegated administrator, GuardDuty applies your organization's auto-enable settings to the member accounts in this request, irrespective of the accounts being new or existing members. For more information about the existing auto-enable settings for your organization, see [DescribeOrganizationConfiguration](#).

If you disassociate a member account that was added by invitation, the member account details obtained from this API, including the associated email addresses, will be retained. This is done so that the delegated administrator can invoke the [InviteMembers](#) API without the need to invoke the `CreateMembers` API again. To remove the details associated with a member account, the delegated administrator must invoke the [DeleteMembers](#) API.

When the member accounts added through AWS Organizations are later disassociated, you (administrator) can't invite them by calling the `InviteMembers` API. You can create an association with these member accounts again only by calling the `CreateMembers` API.

## Request Syntax

```
POST /detector/detectorId/member HTTP/1.1
Content-type: application/json

{
  "accountDetails": [
    {
      "accountId": "string",
      "email": "string"
    }
  ]
}
```

## URI Request Parameters

The request uses the following URI parameters.

### detectorId

The unique ID of the detector of the GuardDuty account for which you want to associate member accounts.

To find the detectorId in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

### accountDetails

A list of account ID and email address pairs of the accounts that you want to associate with the GuardDuty administrator account.

Type: Array of [AccountDetail](#) objects

Array Members: Minimum number of 1 item. Maximum number of 50 items.

Required: Yes

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
    "unprocessedAccounts": [
        {
            "accountIdresult
```

```
    }  
]  
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### [unprocessedAccounts](#)

A list of objects that include the account IDs of the unprocessed accounts and a result string that explains why each was unprocessed.

Type: Array of [UnprocessedAccount](#) objects

Array Members: Minimum number of 0 items. Maximum number of 50 items.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

### **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

# CreatePublishingDestination

Creates a publishing destination where you can export your GuardDuty findings. Before you start exporting the findings, the destination resource must exist.

## Request Syntax

```
POST /detector/detectorId/publishingDestination HTTP/1.1
Content-type: application/json

{
  "clientTokendestinationPropertiesdestinationType
```

## URI Request Parameters

The request uses the following URI parameters.

### detectorId

The ID of the GuardDuty detector associated with the publishing destination.

To find the `detectorId` in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

### clientToken

The idempotency token for the request.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 64.

Required: No

### [destinationProperties](#)

The properties of the publishing destination, including the ARNs for the destination and the KMS key used for encryption.

Type: [DestinationProperties](#) object

Required: Yes

### [destinationType](#)

The type of resource for the publishing destination. Currently only Amazon S3 buckets are supported.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

Valid Values: S3

Required: Yes

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
  "destinationId": "string"
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

## **destinationId**

The ID of the publishing destination that is created.

Type: String

## **Errors**

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

### **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

## **See Also**

# CreateSampleFindings

Generates sample findings of types specified by the list of finding types. If 'NULL' is specified for findingTypes, the API generates sample findings of all supported finding types.

## Request Syntax

```
POST /detector/detectorId/findings/create HTTP/1.1
Content-type: application/json

{
  "findingTypesstring" ]
}
```

## URI Request Parameters

The request uses the following URI parameters.

### detectorId

The ID of the detector for which you need to create sample findings.

To find the detectorId in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

### findingTypes

The types of sample findings to generate.

Type: Array of strings

Array Members: Minimum number of 0 items. Maximum number of 50 items.

Length Constraints: Minimum length of 1. Maximum length of 50.

Required: No

## Response Syntax

HTTP/1.1 200

## Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### BadRequestException

A bad request exception object.

HTTP Status Code: 400

### InternalServerErrorException

An internal server error exception object.

HTTP Status Code: 500

# CreateThreatIntelSet

Creates a new ThreatIntelSet. ThreatIntelSets consist of known malicious IP addresses. GuardDuty generates findings based on ThreatIntelSets. Only users of the administrator account can use this operation.

## Request Syntax

```
POST /detector/detectorId/threatintelset HTTP/1.1
Content-type: application/json

{
  "activateboolean,
  "clientTokenstring",
  "expectedBucketOwnerstring",
  "formatstring",
  "locationstring",
  "namestring",
  "tagsstring : "string"
  }
}
```

## URI Request Parameters

The request uses the following URI parameters.

### detectorId

The unique ID of the detector of the GuardDuty account for which you want to create a ThreatIntelSet.

To find the `detectorId` in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

### activate

A Boolean value that indicates whether GuardDuty is to start using the uploaded ThreatIntelSet.

Type: Boolean

Required: Yes

### clientToken

The idempotency token for the create request.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 64.

Required: No

### expectedBucketOwner

The AWS account ID that owns the Amazon S3 bucket specified in the **location** parameter.

Type: String

Length Constraints: Fixed length of 12.

Required: No

### format

The format of the file that contains the ThreatIntelSet.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

Valid Values: TXT | STIX | OTX\_CSV | ALIEN\_VAULT | PROOF\_POINT | FIRE\_EYE

Required: Yes

## location

The URI of the file that contains the ThreatIntelSet.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## name

A user-friendly ThreatIntelSet name displayed in all findings that are generated by activity that involves IP addresses included in this ThreatIntelSet.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## tags

The tags to be added to a new threat list resource.

Type: String to string map

Map Entries: Maximum number of 200 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: ^(?!aws:)[a-zA-Z+=.\_:/]+\$

Value Length Constraints: Maximum length of 256.

Required: No

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
    "threatIntelSetId": "string"
```

```
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### [threatIntelSetId](#)

The ID of the ThreatIntelSet resource.

Type: String

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **AccessDeniedException**

An access denied exception object.

HTTP Status Code: 403

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

### **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

# DeclineInvitations

Declines invitations sent to the current member account by AWS accounts specified by their account IDs.

## Request Syntax

```
POST /invitation/decline HTTP/1.1
Content-type: application/json

{
    "accountIds
```

## URI Request Parameters

The request does not use any URI parameters.

## Request Body

The request accepts the following data in JSON format.

### accountIds

A list of account IDs of the AWS accounts that sent invitations to the current member account that you want to decline invitations from.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 50 items.

Length Constraints: Fixed length of 12.

Required: Yes

## Response Syntax

```
HTTP/1.1 200
```

```
Content-type: application/json
```

```
{
    "unprocessedAccountsaccountId: "string",
            "result: "string"
        }
    ]
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### unprocessedAccounts

A list of objects that contain the unprocessed account and a result string that explains why it was unprocessed.

Type: Array of [UnprocessedAccount](#) objects

Array Members: Minimum number of 0 items. Maximum number of 50 items.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

### **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

# DeleteDetector

Deletes an Amazon GuardDuty detector that is specified by the detector ID.

## Request Syntax

```
DELETE /detector/detectorId HTTP/1.1
```

## URI Request Parameters

The request uses the following URI parameters.

### [detectorId](#)

The unique ID of the detector that you want to delete.

To find the `detectorId` in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request does not have a request body.

## Response Syntax

```
HTTP/1.1 200
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

## BadRequestException

A bad request exception object.

HTTP Status Code: 400

## InternalServerErrorException

An internal server error exception object.

HTTP Status Code: 500

## See Also

## DeleteFilter

Deletes the filter specified by the filter name.

### Request Syntax

```
DELETE /detector/detectorId/filter/filterName HTTP/1.1
```

### URI Request Parameters

The request uses the following URI parameters.

#### [detectorId](#)

The unique ID of the detector that is associated with the filter.

To find the `detectorId` in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

#### [filterName](#)

The name of the filter that you want to delete.

Required: Yes

### Request Body

The request does not have a request body.

### Response Syntax

```
HTTP/1.1 200
```

### Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### BadRequestException

A bad request exception object.

HTTP Status Code: 400

### InternalServerErrorException

An internal server error exception object.

HTTP Status Code: 500

# DeleteInvitations

Deletes invitations sent to the current member account by AWS accounts specified by their account IDs.

## Request Syntax

```
POST /invitation/delete HTTP/1.1
Content-type: application/json

{
    "accountIdsstring" ]
}
```

## URI Request Parameters

The request does not use any URI parameters.

## Request Body

The request accepts the following data in JSON format.

### accountIds

A list of account IDs of the AWS accounts that sent invitations to the current member account that you want to delete invitations from.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 50 items.

Length Constraints: Fixed length of 12.

Required: Yes

## Response Syntax

```
HTTP/1.1 200
```

```
Content-type: application/json
```

```
{
    "unprocessedAccountsaccountId: "string",
            "result: "string"
        }
    ]
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### unprocessedAccounts

A list of objects that contain the unprocessed account and a result string that explains why it was unprocessed.

Type: Array of [UnprocessedAccount](#) objects

Array Members: Minimum number of 0 items. Maximum number of 50 items.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

### **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

## See Also

## DeleteIPSet

Deletes the IPSet specified by the `ipSetId`. IPSets are called trusted IP lists in the console user interface.

### Request Syntax

```
DELETE /detector/detectorId/ipset/ipSetId HTTP/1.1
```

### URI Request Parameters

The request uses the following URI parameters.

#### [detectorId](#)

The unique ID of the detector associated with the IPSet.

To find the `detectorId` in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

#### [ipSetId](#)

The unique ID of the IPSet to delete.

Required: Yes

### Request Body

The request does not have a request body.

### Response Syntax

```
HTTP/1.1 200
```

### Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### BadRequestException

A bad request exception object.

HTTP Status Code: 400

### InternalServerErrorException

An internal server error exception object.

HTTP Status Code: 500

# DeleteMalwareProtectionPlan

Deletes the Malware Protection plan ID associated with the Malware Protection plan resource. Use this API only when you no longer want to protect the resource associated with this Malware Protection plan ID.

## Request Syntax

```
DELETE /malware-protection-plan/malwareProtectionPlanId HTTP/1.1
```

## URI Request Parameters

The request uses the following URI parameters.

### malwareProtectionPlanId

A unique identifier associated with Malware Protection plan resource.

Required: Yes

## Request Body

The request does not have a request body.

## Response Syntax

```
HTTP/1.1 200
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### AccessDeniedException

An access denied exception object.

HTTP Status Code: 403

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

### **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

### **ResourceNotFoundException**

The requested resource can't be found.

HTTP Status Code: 404

## **See Also**

# DeleteMembers

Deletes GuardDuty member accounts (to the current GuardDuty administrator account) specified by the account IDs.

With `autoEnableOrganizationMembers` configuration for your organization set to ALL, you'll receive an error if you attempt to disable GuardDuty for a member account in your organization.

## Request Syntax

```
POST /detector/detectorId/member/delete HTTP/1.1
Content-type: application/json

{
  "accountIdsstring" ]
}
```

## URI Request Parameters

The request uses the following URI parameters.

### detectorId

The unique ID of the detector of the GuardDuty account whose members you want to delete.

To find the `detectorId` in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

### accountIds

A list of account IDs of the GuardDuty member accounts that you want to delete.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 50 items.

Length Constraints: Fixed length of 12.

Required: Yes

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
    "unprocessedAccounts": [
        {
            "accountIdresult
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### [\*\*unprocessedAccounts\*\*](#)

The accounts that could not be processed.

Type: Array of [UnprocessedAccount](#) objects

Array Members: Minimum number of 0 items. Maximum number of 50 items.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

## InternalServerErrorException

An internal server error exception object.

HTTP Status Code: 500

## See Also

# DeletePublishingDestination

Deletes the publishing definition with the specified destinationId.

## Request Syntax

```
DELETE /detector/detectorId/publishingDestination/destinationId HTTP/1.1
```

## URI Request Parameters

The request uses the following URI parameters.

### [destinationId](#)

The ID of the publishing destination to delete.

Required: Yes

### [detectorId](#)

The unique ID of the detector associated with the publishing destination to delete.

To find the detectorId in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request does not have a request body.

## Response Syntax

```
HTTP/1.1 200
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### BadRequestException

A bad request exception object.

HTTP Status Code: 400

### InternalServerErrorException

An internal server error exception object.

HTTP Status Code: 500

# DeleteThreatIntelSet

Deletes the ThreatIntelSet specified by the ThreatIntelSet ID.

## Request Syntax

```
DELETE /detector/detectorId/threatintelset/threatIntelSetId HTTP/1.1
```

## URI Request Parameters

The request uses the following URI parameters.

### [detectorId](#)

The unique ID of the detector that is associated with the threatIntelSet.

To find the detectorId in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

### [threatIntelSetId](#)

The unique ID of the threatIntelSet that you want to delete.

Required: Yes

## Request Body

The request does not have a request body.

## Response Syntax

```
HTTP/1.1 200
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### BadRequestException

A bad request exception object.

HTTP Status Code: 400

### InternalServerErrorException

An internal server error exception object.

HTTP Status Code: 500

# DescribeMalwareScans

Returns a list of malware scans. Each member account can view the malware scans for their own accounts. An administrator can view the malware scans for all the member accounts.

There might be regional differences because some data sources might not be available in all the AWS Regions where GuardDuty is presently supported. For more information, see [Regions and endpoints](#).

## Request Syntax

```
POST /detector/detectorId/malware-scans HTTP/1.1
Content-type: application/json

{
  "filterCriteria": {
    "filterCriterion": [
      {
        "criterionKey": "string",
        "filterCondition": {
          "equalsValue": "string",
          "greaterThan": number,
          "lessThan": number
        }
      }
    ]
  },
  "maxResults": number,
  "nextToken": "string",
  "sortCriteria": {
    "attributeName": "string",
    "orderBy": "string"
  }
}
```

## URI Request Parameters

The request uses the following URI parameters.

### [detectorId](#)

The unique ID of the detector that the request is associated with.

To find the detectorId in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

### [filterCriteria](#)

Represents the criteria to be used in the filter for describing scan entries.

Type: [FilterCriteria](#) object

Required: No

### [maxResults](#)

You can use this parameter to indicate the maximum number of items that you want in the response. The default value is 50. The maximum value is 50.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 50.

Required: No

### [nextToken](#)

You can use this parameter when paginating results. Set the value of this parameter to null on your first call to the list action. For subsequent calls to the action, fill nextToken in the request with the value of NextToken from the previous response to continue listing data.

Type: String

Required: No

### [sortCriteria](#)

Represents the criteria used for sorting scan entries. The [attributeName](#) is required and it must be scanStartTime.

Type: [SortCriteria object](#)

Required: No

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
    "nextToken": "string",
    "scans": [
        {
            "accountId": "string",
            "adminDetectorId": "string",
            "attachedVolumes": [
                {
                    "deviceName": "string",
                    "encryptionType": "string",
                    "kmsKeyArn": "string",
                    "snapshotArn": "string",
                    "volumeArn": "string",
                    "volumeSizeInGB": number,
                    "volumeType": "string"
                }
            ],
            "detectorId": "string",
            "failureReason": "string",
            "fileCount": number,
            "resourceDetails": {
                "instanceArn": "string"
            },
            "scanEndTime": number,
            "scanId": "string",
            "scanResultDetails": {
                "scanResult": "string"
            },
            "scanStartTime": number,
            "scanStatus": "string",
            "scanType": "string",
            "totalBytes": number,
            "triggerDetails": {
                "description": "string",
                "source": "string"
            }
        }
    ]
}
```

```
        "guardDutyFindingId": "string"
    }
}
]
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### [nextToken](#)

The pagination parameter to be used on the next list operation to retrieve more items.

Type: String

### [scans](#)

Contains information about malware scans associated with GuardDuty Malware Protection for EC2.

Type: Array of [Scan](#) objects

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

### **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

## See Also

# DescribeOrganizationConfiguration

Returns information about the account selected as the delegated administrator for GuardDuty.

There might be regional differences because some data sources might not be available in all the AWS Regions where GuardDuty is presently supported. For more information, see [Regions and endpoints](#).

## Request Syntax

```
GET /detector/detectorId/admin?maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

## URI Request Parameters

The request uses the following URI parameters.

### [detectorId](#)

The detector ID of the delegated administrator for which you need to retrieve the information.

To find the `detectorId` in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

### [MaxResults](#)

You can use this parameter to indicate the maximum number of items that you want in the response.

Valid Range: Minimum value of 1. Maximum value of 50.

### [NextToken](#)

You can use this parameter when paginating results. Set the value of this parameter to null on your first call to the list action. For subsequent calls to the action, fill `nextToken` in the request with the value of `NextToken` from the previous response to continue listing data.

## Request Body

The request does not have a request body.

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
    "autoEnable": boolean,
    "autoEnableOrganizationMembers": "string",
    "dataSources": {
        "kubernetes": {
            "auditLogs": {
                "autoEnable": boolean
            }
        },
        "malwareProtection": {
            "scanEc2InstanceWithFindings": {
                "ebsVolumes": {
                    "autoEnable": boolean
                }
            }
        },
        "s3Logs": {
            "autoEnable": boolean
        }
    },
    "features": [
        {
            "additionalConfiguration": [
                {
                    "autoEnable": "string",
                    "name": "string"
                }
            ],
            "autoEnable": "string",
            "name": "string"
        }
    ],
    "memberAccountLimitReached": boolean,
    "nextToken": "string"
```

}

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### [autoEnable](#)

*This parameter has been deprecated.*

Indicates whether GuardDuty is automatically enabled for accounts added to the organization.

Even though this is still supported, we recommend using `AutoEnableOrganizationMembers` to achieve the similar results.

Type: Boolean

### [autoEnableOrganizationMembers](#)

Indicates the auto-enablement configuration of GuardDuty or any of the corresponding protection plans for the member accounts in the organization.

- NEW: Indicates that when a new account joins the organization, they will have GuardDuty or any of the corresponding protection plans enabled automatically.
- ALL: Indicates that all accounts in the organization have GuardDuty and any of the corresponding protection plans enabled automatically. This includes NEW accounts that join the organization and accounts that may have been suspended or removed from the organization in GuardDuty.
- NONE: Indicates that GuardDuty or any of the corresponding protection plans will not be automatically enabled for any account in the organization. The administrator must manage GuardDuty for each account in the organization individually.

When you update the auto-enable setting from ALL or NEW to NONE, this action doesn't disable the corresponding option for your existing accounts. This configuration will apply to the new accounts that join the organization. After you update the auto-enable settings, no new account will have the corresponding option as enabled.

Type: String

Valid Values: NEW | ALL | NONE

## [dataSources](#)

*This parameter has been deprecated.*

Describes which data sources are enabled automatically for member accounts.

Type: [OrganizationDataSourceConfigurationsResult](#) object

## [features](#)

A list of features that are configured for this organization.

Type: Array of [OrganizationFeatureConfigurationResult](#) objects

## [memberAccountLimitReached](#)

Indicates whether the maximum number of allowed member accounts are already associated with the delegated administrator account for your organization.

Type: Boolean

## [nextToken](#)

The pagination parameter to be used on the next list operation to retrieve more items.

Type: String

# Errors

For information about the errors that are common to all actions, see [Common Errors](#).

## **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

## **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

# DescribePublishingDestination

Returns information about the publishing destination specified by the provided destinationId.

## Request Syntax

```
GET /detector/detectorId/publishingDestination/destinationId HTTP/1.1
```

## URI Request Parameters

The request uses the following URI parameters.

### destinationId

The ID of the publishing destination to retrieve.

Required: Yes

### detectorId

The unique ID of the detector associated with the publishing destination to retrieve.

To find the detectorId in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request does not have a request body.

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
    "destinationId": "string",
```

```
"destinationProperties": {  
    "destinationArn    "kmsKeyArn": "string"  
},  
"destinationType": "string",  
"publishingFailureStartTimestamp": number,  
"status": "string"  
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### destinationId

The ID of the publishing destination.

Type: String

### destinationProperties

A DestinationProperties object that includes the DestinationArn and KmsKeyArn of the publishing destination.

Type: [DestinationProperties](#) object

### destinationType

The type of publishing destination. Currently, only Amazon S3 buckets are supported.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

Valid Values: S3

### publishingFailureStartTimestamp

The time, in epoch millisecond format, at which GuardDuty was first unable to publish findings to the destination.

Type: Long

## **status**

The status of the publishing destination.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

Valid Values: PENDING\_VERIFICATION | PUBLISHING |  
UNABLE\_TO\_PUBLISH\_FIX\_DESTINATION\_PROPERTY | STOPPED

## **Errors**

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

### **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

## **See Also**

# DisableOrganizationAdminAccount

Removes the existing GuardDuty delegated administrator of the organization. Only the organization's management account can run this API operation.

## Request Syntax

```
POST /admin/disable HTTP/1.1
Content-type: application/json

{
    "adminAccountId": "string"
}
```

## URI Request Parameters

The request does not use any URI parameters.

## Request Body

The request accepts the following data in JSON format.

### adminAccountId

The AWS Account ID for the organizations account to be disabled as a GuardDuty delegated administrator.

Type: String

Required: Yes

## Response Syntax

```
HTTP/1.1 200
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### BadRequestException

A bad request exception object.

HTTP Status Code: 400

### InternalServerErrorException

An internal server error exception object.

HTTP Status Code: 500

# DisassociateFromAdministratorAccount

Disassociates the current GuardDuty member account from its administrator account.

When you disassociate an invited member from a GuardDuty delegated administrator, the member account details obtained from the [CreateMembers](#) API, including the associated email addresses, are retained. This is done so that the delegated administrator can invoke the [InviteMembers](#) API without the need to invoke the CreateMembers API again. To remove the details associated with a member account, the delegated administrator must invoke the [DeleteMembers](#) API.

With `autoEnableOrganizationMembers` configuration for your organization set to ALL, you'll receive an error if you attempt to disable GuardDuty in a member account.

## Request Syntax

```
POST /detector/detectorId/administrator/disassociate HTTP/1.1
```

## URI Request Parameters

The request uses the following URI parameters.

### detectorId

The unique ID of the detector of the GuardDuty member account.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request does not have a request body.

## Response Syntax

```
HTTP/1.1 200
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### BadRequestException

A bad request exception object.

HTTP Status Code: 400

### InternalServerErrorException

An internal server error exception object.

HTTP Status Code: 500

# DisassociateFromMasterAccount

*This action has been deprecated.*

Disassociates the current GuardDuty member account from its administrator account.

When you disassociate an invited member from a GuardDuty delegated administrator, the member account details obtained from the [CreateMembers](#) API, including the associated email addresses, are retained. This is done so that the delegated administrator can invoke the [InviteMembers](#) API without the need to invoke the CreateMembers API again. To remove the details associated with a member account, the delegated administrator must invoke the [DeleteMembers](#) API.

## Request Syntax

```
POST /detector/detectorId/master/disassociate HTTP/1.1
```

## URI Request Parameters

The request uses the following URI parameters.

### detectorId

The unique ID of the detector of the GuardDuty member account.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request does not have a request body.

## Response Syntax

```
HTTP/1.1 200
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### BadRequestException

A bad request exception object.

HTTP Status Code: 400

### InternalServerErrorException

An internal server error exception object.

HTTP Status Code: 500

# DisassociateMembers

Disassociates GuardDuty member accounts (from the current administrator account) specified by the account IDs.

When you disassociate an invited member from a GuardDuty delegated administrator, the member account details obtained from the [CreateMembers](#) API, including the associated email addresses, are retained. This is done so that the delegated administrator can invoke the [InviteMembers](#) API without the need to invoke the CreateMembers API again. To remove the details associated with a member account, the delegated administrator must invoke the [DeleteMembers](#) API.

With `autoEnableOrganizationMembers` configuration for your organization set to ALL, you'll receive an error if you attempt to disassociate a member account before removing them from your organization.

If you disassociate a member account that was added by invitation, the member account details obtained from this API, including the associated email addresses, will be retained. This is done so that the delegated administrator can invoke the [InviteMembers](#) API without the need to invoke the CreateMembers API again. To remove the details associated with a member account, the delegated administrator must invoke the [DeleteMembers](#) API.

When the member accounts added through AWS Organizations are later disassociated, you (administrator) can't invite them by calling the [InviteMembers](#) API. You can create an association with these member accounts again only by calling the [CreateMembers](#) API.

## Request Syntax

```
POST /detector/detectorId/member/disassociate HTTP/1.1
Content-type: application/json

{
    "accountIds": [ "string" ]
}
```

## URI Request Parameters

The request uses the following URI parameters.

## detectorId

The unique ID of the detector of the GuardDuty account whose members you want to disassociate from the administrator account.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

### accountIds

A list of account IDs of the GuardDuty member accounts that you want to disassociate from the administrator account.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 50 items.

Length Constraints: Fixed length of 12.

Required: Yes

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
    "unprocessedAccounts": [
        {
            "accountId": "string",
            "result": "string"
        }
    ]
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### [unprocessedAccounts](#)

A list of objects that contain the unprocessed account and a result string that explains why it was unprocessed.

Type: Array of [UnprocessedAccount](#) objects

Array Members: Minimum number of 0 items. Maximum number of 50 items.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

### **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

# EnableOrganizationAdminAccount

Designates an AWS account within the organization as your GuardDuty delegated administrator. Only the organization's management account can run this API operation.

## Request Syntax

```
POST /admin/enable HTTP/1.1
Content-type: application/json

{
    "adminAccountId
```

## URI Request Parameters

The request does not use any URI parameters.

## Request Body

The request accepts the following data in JSON format.

### adminAccountId

The AWS account ID for the organization account to be enabled as a GuardDuty delegated administrator.

Type: String

Required: Yes

## Response Syntax

```
HTTP/1.1 200
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### BadRequestException

A bad request exception object.

HTTP Status Code: 400

### InternalServerErrorException

An internal server error exception object.

HTTP Status Code: 500

# GetAdministratorAccount

Provides the details of the GuardDuty administrator account associated with the current GuardDuty member account.

Based on the type of account that runs this API, the following list shows how the API behavior varies:

- When the GuardDuty administrator account runs this API, it will return success (HTTP 200) but no content.
- When a member account runs this API, it will return the details of the GuardDuty administrator account that is associated with this calling member account.
- When an individual account (not associated with an organization) runs this API, it will return success (HTTP 200) but no content.

## Request Syntax

```
GET /detector/detectorId/administrator HTTP/1.1
```

## URI Request Parameters

The request uses the following URI parameters.

### **detectorId**

The unique ID of the detector of the GuardDuty member account.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request does not have a request body.

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json
```

```
{  
    "administrator": {  
        "accountId": "string",  
        "invitationId": "string",  
        "invitedAt": "string",  
        "relationshipStatus": "string"  
    }  
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### [administrator](#)

The administrator account details.

Type: [Administrator](#) object

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

### **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

# GetCoverageStatistics

Retrieves aggregated statistics for your account. If you are a GuardDuty administrator, you can retrieve the statistics for all the resources associated with the active member accounts in your organization who have enabled Runtime Monitoring and have the GuardDuty security agent running on their resources.

## Request Syntax

```
POST /detector/detectorId/coverage/statistics HTTP/1.1
Content-type: application/json

{
  "filterCriteria": {
    "filterCriterion": [
      {
        "criterionKey": "string",
        "filterCondition": {
          "equals": [ "string" ],
          "notEquals": [ "string" ]
        }
      }
    ],
    "statisticsType": [ "string" ]
  }
}
```

## URI Request Parameters

The request uses the following URI parameters.

### detectorId

The unique ID of the GuardDuty detector.

To find the `detectorId` in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

### filterCriteria

Represents the criteria used to filter the coverage statistics.

Type: [CoverageFilterCriteria](#) object

Required: No

### statisticsType

Represents the statistics type used to aggregate the coverage details.

Type: Array of strings

Valid Values: COUNT\_BY\_RESOURCE\_TYPE | COUNT\_BY\_COVERAGE\_STATUS

Required: Yes

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
    "coverageStatistics": {
        "countByCoverageStatus": {
            "string" : number
        },
        "countByResourceType": {
            "string" : number
        }
    }
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

## **coverageStatistics**

Represents the count aggregated by the `statusCode` and `resourceType`.

Type: [CoverageStatistics object](#)

## **Errors**

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

### **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

## **See Also**

## GetDetector

Retrieves a GuardDuty detector specified by the detectorId.

There might be regional differences because some data sources might not be available in all the AWS Regions where GuardDuty is presently supported. For more information, see [Regions and endpoints](#).

## Request Syntax

```
GET /detector/detectorId HTTP/1.1
```

## URI Request Parameters

The request uses the following URI parameters.

### [detectorId](#)

The unique ID of the detector that you want to get.

To find the detectorId in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request does not have a request body.

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json
```

```
{
  "createdAt": "string",
  "dataSources": {
    "cloudTrail": {
      "statusstring"
```

```
},
"dnsLogs": {
    "status": "string"
},
"flowLogs": {
    "status": "string"
},
"kubernetes": {
    "auditLogs": {
        "status": "string"
    }
},
"malwareProtection": {
    "scanEc2InstanceWithFindings": {
        "ebsVolumes": {
            "reason": "string",
            "status": "string"
        }
    },
    "serviceRole": "string"
},
"s3Logs": {
    "status": "string"
}
},
"features": [
{
    "additionalConfiguration": [
        {
            "name": "string",
            "status": "string",
            "updatedAt": number
        }
    ],
    "name": "string",
    "status": "string",
    "updatedAt": number
}
],
"findingPublishingFrequency": "string",
"serviceRole": "string",
"status": "string",
"tags": {
    "string" : "string"
}
```

```
},  
  "updatedAt": "string"  
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### [createdAt](#)

The timestamp of when the detector was created.

Type: String

### [dataSources](#)

*This parameter has been deprecated.*

Describes which data sources are enabled for the detector.

Type: [DataSourceConfigurationsResult](#) object

### [features](#)

Describes the features that have been enabled for the detector.

Type: Array of [DetectorFeatureConfigurationResult](#) objects

### [findingPublishingFrequency](#)

The publishing frequency of the finding.

Type: String

Valid Values: FIFTEEN\_MINUTES | ONE\_HOUR | SIX\_HOURS

### [serviceRole](#)

The GuardDuty service role.

Type: String

## status

The detector status.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

Valid Values: ENABLED | DISABLED

## tags

The tags of the detector resource.

Type: String to string map

Map Entries: Maximum number of 200 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: ^(?!\aws:)[a-zA-Z+-.=.\_:/]+\$

Value Length Constraints: Maximum length of 256.

## updatedAt

The last-updated timestamp for the detector.

Type: String

# Errors

For information about the errors that are common to all actions, see [Common Errors](#).

## **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

## **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

# GetFilter

Returns the details of the filter specified by the filter name.

## Request Syntax

```
GET /detector/detectorId/filter/filterName HTTP/1.1
```

## URI Request Parameters

The request uses the following URI parameters.

### detectorId

The unique ID of the detector that is associated with this filter.

To find the detectorId in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

### filterName

The name of the filter you want to get.

Required: Yes

## Request Body

The request does not have a request body.

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
    "action": "string",
    "description": "string",
```

```
"findingCriteria": {  
    "criterion": {  
        "string" : {  
            "eq": [ "string" ],  
            "equals": [ "string" ],  
            "greaterThan": number,  
            "greaterThanOrEqual": number,  
            "gt": number,  
            "gte": number,  
            "lessThan": number,  
            "lessThanOrEqual": number,  
            "lt": number,  
            "lte": number,  
            "neq": [ "string" ],  
            "notEquals": [ "string" ]  
        }  
    }  
},  
"name": "string",  
"rank": number,  
"tags": {  
    "string" : "string"  
}  
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### [action](#)

Specifies the action that is to be applied to the findings that match the filter.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

Valid Values: NOOP | ARCHIVE

### [description](#)

The description of the filter.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 512.

### [findingCriteria](#)

Represents the criteria to be used in the filter for querying findings.

Type: [FindingCriteria](#) object

### [name](#)

The name of the filter.

Type: String

Length Constraints: Minimum length of 3. Maximum length of 64.

### [rank](#)

Specifies the position of the filter in the list of current filters. Also specifies the order in which this filter is applied to the findings.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

### [tags](#)

The tags of the filter resource.

Type: String to string map

Map Entries: Maximum number of 200 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: ^(?!\aws:)[a-zA-Z+-=.\_:/]+\$

Value Length Constraints: Maximum length of 256.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

## BadRequestException

A bad request exception object.

HTTP Status Code: 400

## InternalServerErrorException

An internal server error exception object.

HTTP Status Code: 500

# GetFindings

Describes Amazon GuardDuty findings specified by finding IDs.

## Request Syntax

```
POST /detector/detectorId/findings/get HTTP/1.1
Content-type: application/json

{
  "findingIdssortCriteriaattributeNameorderBy
```

## URI Request Parameters

The request uses the following URI parameters.

### detectorId

The ID of the detector that specifies the GuardDuty service whose findings you want to retrieve.

To find the `detectorId` in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

### findingIds

The IDs of the findings that you want to retrieve.

Type: Array of strings

Array Members: Minimum number of 0 items. Maximum number of 50 items.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

### sortCriteria

Represents the criteria used for sorting findings.

Type: [SortCriteria](#) object

Required: No

## Response Syntax

HTTP/1.1 200  
Content-type: application/json

```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### [findings](#)

A list of findings.

Type: Array of [Finding](#) objects

Array Members: Minimum number of 0 items. Maximum number of 50 items.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

## InternalServerErrorException

An internal server error exception object.

HTTP Status Code: 500

## See Also

# GetFindingsStatistics

Lists GuardDuty findings statistics for the specified detector ID.

You must provide either `findingStatisticTypes` or `groupBy` parameter, and not both. You can use the `maxResults` and `orderBy` parameters only when using `groupBy`.

There might be regional differences because some flags might not be available in all the Regions where GuardDuty is currently supported. For more information, see [Regions and endpoints](#).

## Request Syntax

```
POST /detector/detectorId/findings/statistics HTTP/1.1
Content-type: application/json

{
    "findingCriteria": {
        "criterion": {
            "string": {
                "eq": [ "string" ],
                "equals": [ "string" ],
                "greaterThan": number,
                "greaterThanOrEqualTo": number,
                "gt": number,
                "gte": number,
                "lessThan": number,
                "lessThanOrEqualTo": number,
                "lt": number,
                "lte": number,
                "neq": [ "string" ],
                "notEquals": [ "string" ]
            }
        }
    },
    "findingStatisticTypes": [ "string" ],
    "groupBy": "string",
    "maxResults": number,
    "orderBy": "string"
}
```

## URI Request Parameters

The request uses the following URI parameters.

### detectorId

The ID of the detector whose findings statistics you want to retrieve.

To find the detectorId in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

### findingCriteria

Represents the criteria that is used for querying findings.

Type: [FindingCriteria](#) object

Required: No

### findingStatisticTypes

*This parameter has been deprecated.*

The types of finding statistics to retrieve.

Type: Array of strings

Array Members: Minimum number of 0 items. Maximum number of 10 items.

Valid Values: COUNT\_BY\_SEVERITY

Required: No

### groupBy

Displays the findings statistics grouped by one of the listed valid values.

Type: String

Valid Values: ACCOUNT | DATE | FINDING\_TYPE | RESOURCE | SEVERITY

Required: No

### maxResults

The maximum number of results to be returned in the response. The default value is 25.

You can use this parameter only with the groupBy parameter.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

### orderBy

Displays the sorted findings in the requested order. The default value of orderBy is DESC.

You can use this parameter only with the groupBy parameter.

Type: String

Valid Values: ASC | DESC

Required: No

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
  "findingStatistics": {
    "countBySeveritystring": number
    },
    "groupedByAccount": [
      {
        "accountId": "string",
        "lastGeneratedAt": number,
      }
    ]
  }
}
```

```
        "totalFindings": number
    }
],
"groupedByDate": [
{
    "date": number,
    "lastGeneratedAt": number,
    "severity": number,
    "totalFindings": number
},
],
"groupedByFindingType": [
{
    "findingType": "string",
    "lastGeneratedAt": number,
    "totalFindings": number
},
],
"groupedByResource": [
{
    "accountId": "string",
    "lastGeneratedAt": number,
    "resourceId": "string",
    "resourceType": "string",
    "totalFindings": number
},
],
"groupedBySeverity": [
{
    "lastGeneratedAt": number,
    "severity": number,
    "totalFindings": number
}
],
},
"nextToken": "string"
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

## **findingStatistics**

The finding statistics object.

Type: [FindingStatistics](#) object

## **nextToken**

The pagination parameter to be used on the next list operation to retrieve more items.

This parameter is currently not supported.

Type: String

## **Errors**

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

### **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

# GetInvitationsCount

Returns the count of all GuardDuty membership invitations that were sent to the current member account except the currently accepted invitation.

## Request Syntax

```
GET /invitation/count HTTP/1.1
```

## URI Request Parameters

The request does not use any URI parameters.

## Request Body

The request does not have a request body.

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
    "invitationsCount": number
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### invitationsCount

The number of received invitations.

Type: Integer

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### BadRequestException

A bad request exception object.

HTTP Status Code: 400

### InternalServerErrorException

An internal server error exception object.

HTTP Status Code: 500

## See Also

# GetIPSet

Retrieves the IPSet specified by the ipSetId.

## Request Syntax

```
GET /detector/detectorId/ipset/ipSetId HTTP/1.1
```

## URI Request Parameters

The request uses the following URI parameters.

### detectorId

The unique ID of the detector that is associated with the IPSet.

To find the detectorId in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

### ipSetId

The unique ID of the IPSet to retrieve.

Required: Yes

## Request Body

The request does not have a request body.

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
    "expectedBucketOwner": "string",
```

```
"format": "string",
"location": "string",
"name": "string",
"status": "string",
"tags": {
    "string" : "string"
}
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### [expectedBucketOwner](#)

The AWS account ID that owns the Amazon S3 bucket specified in the **location** parameter. This field appears in the response only if it was provided during IPSet creation or update.

Type: String

Length Constraints: Fixed length of 12.

### [format](#)

The format of the file that contains the IPSet.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

Valid Values: TXT | STIX | OTX\_CSV | ALIEN\_VAULT | PROOF\_POINT | FIRE\_EYE

### [location](#)

The URI of the file that contains the IPSet.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

### [name](#)

The user-friendly name for the IPSet.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

### [status](#)

The status of IPSet file that was uploaded.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

Valid Values: INACTIVE | ACTIVATING | ACTIVE | DEACTIVATING | ERROR | DELETE\_PENDING | DELETED

### [tags](#)

The tags of the IPSet resource.

Type: String to string map

Map Entries: Maximum number of 200 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: ^(?!\aws:)[a-zA-Z+-=.\_:/]+\$

Value Length Constraints: Maximum length of 256.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

### **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

# GetMalwareProtectionPlan

Retrieves the Malware Protection plan details associated with a Malware Protection plan ID.

## Request Syntax

```
GET /malware-protection-plan/malwareProtectionPlanId HTTP/1.1
```

## URI Request Parameters

The request uses the following URI parameters.

### malwareProtectionPlanId

A unique identifier associated with Malware Protection plan resource.

Required: Yes

## Request Body

The request does not have a request body.

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
    "actionstaggingstatusarncreatedAtprotectedResources3BucketbucketNameobjectPrefixes
```

```
},
"role": "string",
"status": "string",
"statusReasons": [
    {
        "code": "string",
        "message": "string"
    }
],
"tags": {
    "string" : "string"
}
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### [actions](#)

Information about whether the tags will be added to the S3 object after scanning.

Type: [MalwareProtectionPlanActions](#) object

### [arn](#)

Amazon Resource Name (ARN) of the protected resource.

Type: String

### [createdAt](#)

The timestamp when the Malware Protection plan resource was created.

Type: Timestamp

### [protectedResource](#)

Information about the protected resource that is associated with the created Malware Protection plan. Presently, S3Bucket is the only supported protected resource.

Type: [CreateProtectedResource](#) object

## role

Amazon Resource Name (ARN) of the IAM role that includes the permissions to scan and add tags to the associated protected resource.

Type: String

## status

Malware Protection plan status.

Type: String

Valid Values: ACTIVE | WARNING | ERROR

## statusReasons

Information about the issue code and message associated to the status of your Malware Protection plan.

Type: Array of [MalwareProtectionPlanStatusReason](#) objects

Array Members: Minimum number of 0 items. Maximum number of 50 items.

## tags

Tags added to the Malware Protection plan resource.

Type: String to string map

Map Entries: Maximum number of 200 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[a-zA-Z+=._:/]+$`

Value Length Constraints: Maximum length of 256.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### AccessDeniedException

An access denied exception object.

HTTP Status Code: 403

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

### **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

### **ResourceNotFoundException**

The requested resource can't be found.

HTTP Status Code: 404

# GetMalwareScanSettings

Returns the details of the malware scan settings.

There might be regional differences because some data sources might not be available in all the AWS Regions where GuardDuty is presently supported. For more information, see [Regions and endpoints](#).

## Request Syntax

```
GET /detector/detectorId/malware-scan-settings HTTP/1.1
```

## URI Request Parameters

The request uses the following URI parameters.

### [detectorId](#)

The unique ID of the detector that is associated with this scan.

To find the `detectorId` in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request does not have a request body.

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
    "ebsSnapshotPreservation": "string",
```

```
"scanResourceCriteria": {  
    "exclude": {  
        "string": {  
            "mapEquals": [  
                {  
                    "key": "string",  
                    "value": "string"  
                }  
            ]  
        }  
    },  
    "include": {  
        "string": {  
            "mapEquals": [  
                {  
                    "key": "string",  
                    "value": "string"  
                }  
            ]  
        }  
    }  
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### ebsSnapshotPreservation

An enum value representing possible snapshot preservation settings.

Type: String

Valid Values: NO\_RETENTION | RETENTION\_WITH\_FINDING

### scanResourceCriteria

Represents the criteria to be used in the filter for scanning resources.

Type: ScanResourceCriteria object

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### BadRequestException

A bad request exception object.

HTTP Status Code: 400

### InternalServerErrorException

An internal server error exception object.

HTTP Status Code: 500

# GetMasterAccount

*This action has been deprecated.*

Provides the details for the GuardDuty administrator account associated with the current GuardDuty member account.

## Request Syntax

```
GET /detector/detectorId/master HTTP/1.1
```

## URI Request Parameters

The request uses the following URI parameters.

### **detectorId**

The unique ID of the detector of the GuardDuty member account.

To find the `detectorId` in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request does not have a request body.

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json
```

```
{
  "masteraccountIdstring",
    "invitationIdstring",
    "invitedAtstring",
```

```
        "relationshipStatus": "string"
    }
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### [master](#)

The administrator account details.

Type: [Master object](#)

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

### **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

# GetMemberDetectors

Describes which data sources are enabled for the member account's detector.

There might be regional differences because some data sources might not be available in all the AWS Regions where GuardDuty is presently supported. For more information, see [Regions and endpoints](#).

## Request Syntax

```
POST /detector/detectorId/member/detector/get HTTP/1.1
Content-type: application/json

{
    "accountIdsstring" ]
}
```

## URI Request Parameters

The request uses the following URI parameters.

### detectorId

The detector ID for the administrator account.

To find the detectorId in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

### accountIds

A list of member account IDs.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 50 items.

Length Constraints: Fixed length of 12.

Required: Yes

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
    "members": [
        {
            "accountId": "string",
            "dataSources": {
                "cloudTrail": {
                    "status": "string"
                },
                "dnsLogs": {
                    "status": "string"
                },
                "flowLogs": {
                    "status": "string"
                },
                "kubernetes": {
                    "auditLogs": {
                        "status": "string"
                    }
                },
                "malwareProtection": {
                    "scanEc2InstanceWithFindings": {
                        "ebsVolumes": {
                            "reason": "string",
                            "status": "string"
                        }
                    },
                    "serviceRole": "string"
                },
                "s3Logs": {
                    "status": "string"
                }
            }
        }
    ]
}
```

```
"features": [  
    {  
        "additionalConfiguration": [  
            {  
                "name": "string",  
                "status": "string",  
                "updatedAt": number  
            }  
        ],  
        "name": "string",  
        "status": "string",  
        "updatedAt": number  
    }  
],  
"unprocessedAccounts": [  
    {  
        "accountId": "string",  
        "result": "string"  
    }  
]
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### members

An object that describes which data sources are enabled for a member account.

Type: Array of [MemberDataSourceConfiguration](#) objects

Array Members: Minimum number of 1 item. Maximum number of 50 items.

### unprocessedAccounts

A list of member account IDs that were unable to be processed along with an explanation for why they were not processed.

Type: Array of [UnprocessedAccount](#) objects

Array Members: Minimum number of 0 items. Maximum number of 50 items.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### BadRequestException

A bad request exception object.

HTTP Status Code: 400

### InternalServerErrorException

An internal server error exception object.

HTTP Status Code: 500

# GetMembers

Retrieves GuardDuty member accounts (of the current GuardDuty administrator account) specified by the account IDs.

## Request Syntax

```
POST /detector/detectorId/member/get HTTP/1.1
Content-type: application/json

{
  "accountIds
```

## URI Request Parameters

The request uses the following URI parameters.

### detectorId

The unique ID of the detector of the GuardDuty account whose members you want to retrieve.

To find the detectorId in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

### accountIds

A list of account IDs of the GuardDuty member accounts that you want to describe.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 50 items.

Length Constraints: Fixed length of 12.

Required: Yes

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
    "members": [
        {
            "accountId": "string",
            "administratorId": "string",
            "detectorId": "string",
            "email": "string",
            "invitedAt": "string",
            "masterId": "string",
            "relationshipStatus": "string",
            "updatedAt": "string"
        }
    ],
    "unprocessedAccounts": [
        {
            "accountId": "string",
            "result": "string"
        }
    ]
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### members

A list of members.

Type: Array of [Member](#) objects

Array Members: Minimum number of 0 items. Maximum number of 50 items.

### unprocessedAccounts

A list of objects that contain the unprocessed account and a result string that explains why it was unprocessed.

Type: Array of [UnprocessedAccount](#) objects

Array Members: Minimum number of 0 items. Maximum number of 50 items.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

### **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

# GetOrganizationStatistics

Retrieves how many active member accounts have each feature enabled within GuardDuty. Only a delegated GuardDuty administrator of an organization can run this API.

When you create a new organization, it might take up to 24 hours to generate the statistics for the entire organization.

## Request Syntax

```
GET /organization/statistics HTTP/1.1
```

## URI Request Parameters

The request does not use any URI parameters.

## Request Body

The request does not have a request body.

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
    "organizationDetails": {
        "organizationStatistics": {
            "activeAccountsCount": number,
            "countByFeature": [
                {
                    "additionalConfiguration": [
                        {
                            "enabledAccountsCount": number,
                            "name": "string"
                        }
                    ],
                    "enabledAccountsCount": number,
                    "name": "string"
                }
            ]
        }
    }
}
```

```
        "enabledAccountsCount": number,  
        "memberAccountsCount": number,  
        "totalAccountsCount": number  
    },  
    "updatedAt": number  
}  
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### [organizationDetails](#)

Information about the statistics report for your organization.

Type: [OrganizationDetails](#) object

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

### **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

## See Also

# GetRemainingFreeTrialDays

Provides the number of days left for each data source used in the free trial period.

## Request Syntax

```
POST /detector/detectorId/freeTrial/daysRemaining HTTP/1.1
Content-type: application/json

{
  "accountIdsstring" ]
}
```

## URI Request Parameters

The request uses the following URI parameters.

### detectorId

The unique ID of the detector of the GuardDuty member account.

To find the `detectorId` in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

### accountIds

A list of account identifiers of the GuardDuty member account.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 50 items.

Length Constraints: Fixed length of 12.

Required: No

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
  "accounts": [
    {
      "accountId": "string",
      "dataSources": {
        "cloudTrail": {
          "freeTrialDaysRemaining": number
        },
        "dnsLogs": {
          "freeTrialDaysRemaining": number
        },
        "flowLogs": {
          "freeTrialDaysRemaining": number
        },
        "kubernetes": {
          "auditLogs": {
            "freeTrialDaysRemaining": number
          }
        },
        "malwareProtection": {
          "scanEc2InstanceWithFindings": {
            "freeTrialDaysRemaining": number
          }
        },
        "s3Logs": {
          "freeTrialDaysRemaining": number
        }
      },
      "features": [
        {
          "freeTrialDaysRemaining": number,
          "name": "string"
        }
      ]
    }
  ]
}
```

```
        }
    ],
    "unprocessedAccounts": [
        {
            "accountIdresult": "string"
        }
    ]
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### accounts

The member accounts which were included in a request and were processed successfully.

Type: Array of [AccountFreeTrialInfo](#) objects

### unprocessedAccounts

The member account that was included in a request but for which the request could not be processed.

Type: Array of [UnprocessedAccount](#) objects

Array Members: Minimum number of 0 items. Maximum number of 50 items.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

### **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

# GetThreatIntelSet

Retrieves the ThreatIntelSet that is specified by the ThreatIntelSet ID.

## Request Syntax

```
GET /detector/detectorId/threatintelset/threatIntelSetId HTTP/1.1
```

## URI Request Parameters

The request uses the following URI parameters.

### [detectorId](#)

The unique ID of the detector that is associated with the threatIntelSet.

To find the detectorId in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

### [threatIntelSetId](#)

The unique ID of the threatIntelSet that you want to get.

Required: Yes

## Request Body

The request does not have a request body.

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
  "expectedBucketOwner": "string",
  "format": "string",
```

```
"location": "string",
"name": "string",
"status": "string",
"tags": {
    "string" : "string"
}
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### [expectedBucketOwner](#)

The AWS account ID that owns the Amazon S3 bucket specified in the **location** parameter. This field appears in the response only if it was provided during ThreatIntelSet creation or update.

Type: String

Length Constraints: Fixed length of 12.

### [format](#)

The format of the threatIntelSet.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

Valid Values: TXT | STIX | OTX\_CSV | ALIEN\_VAULT | PROOF\_POINT | FIRE\_EYE

### [location](#)

The URI of the file that contains the ThreatIntelSet.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

### [name](#)

A user-friendly ThreatIntelSet name displayed in all findings that are generated by activity that involves IP addresses included in this ThreatIntelSet.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

### [status](#)

The status of threatIntelSet file uploaded.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

Valid Values: INACTIVE | ACTIVATING | ACTIVE | DEACTIVATING | ERROR | DELETE\_PENDING | DELETED

### [tags](#)

The tags of the threat list resource.

Type: String to string map

Map Entries: Maximum number of 200 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: ^(?!\aws:)[a-zA-Z+=.\_:/]+\$

Value Length Constraints: Maximum length of 256.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

### **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

## See Also

# GetUsageStatistics

Lists Amazon GuardDuty usage statistics over the last 30 days for the specified detector ID. For newly enabled detectors or data sources, the cost returned will include only the usage so far under 30 days. This may differ from the cost metrics in the console, which project usage over 30 days to provide a monthly cost estimate. For more information, see [Understanding How Usage Costs are Calculated](#).

## Request Syntax

```
POST /detector/detectorId/usage/statistics HTTP/1.1
Content-type: application/json

{
    "maxResultsnumber,
    "nextTokenstring",
    "unitstring",
    "usageCriteriaaccountIdsstring" ],
        "dataSourcesstring" ],
        "featuresstring" ],
        "resourcesstring" ]
    },
    "usageStatisticsTypestring"
}
```

## URI Request Parameters

The request uses the following URI parameters.

### [detectorId](#)

The ID of the detector that specifies the GuardDuty service whose usage statistics you want to retrieve.

To find the `detectorId` in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

### [maxResults](#)

The maximum number of results to return in the response.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 50.

Required: No

### [nextToken](#)

A token to use for paginating results that are returned in the response. Set the value of this parameter to null for the first request to a list action. For subsequent calls, use the NextToken value returned from the previous request to continue listing results after the first page.

Type: String

Required: No

### [unit](#)

The currency unit you would like to view your usage statistics in. Current valid values are USD.

Type: String

Required: No

### [usageCriteria](#)

Represents the criteria used for querying usage.

Type: [UsageCriteria](#) object

Required: Yes

### [usageStatisticsType](#)

The type of usage statistics to retrieve.

Type: String

Valid Values: SUM\_BY\_ACCOUNT | SUM\_BY\_DATA\_SOURCE | SUM\_BY\_RESOURCE | TOP\_RESOURCES | SUM\_BY\_FEATURES | TOP\_ACCOUNTS\_BY\_FEATURE

Required: Yes

## Response Syntax

HTTP/1.1 200  
Content-type: application/json

```
{  
    "nextToken": "string",  
    "usageStatistics": [  
        "sumByAccount": [  
            {  
                "accountId": "string",  
                "total": {  
                    "amount": "string",  
                    "unit": "string"

                "accountId": "string",
                "total": {
                    "amount": "string",
                    "unit": "string"
                }
            }
        ],
        "feature": "string"
    }
],
"topResources": [
    {
        "resource": "string",
        "total": {
            "amount": "string",
            "unit": "string"
        }
    }
]
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### [nextToken](#)

The pagination parameter to be used on the next list operation to retrieve more items.

Type: String

### **usageStatistics**

The usage statistics object. If a UsageStatisticType was provided, the objects representing other types will be null.

Type: [UsageStatistics](#) object

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

### **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

# InviteMembers

Invites AWS accounts to become members of an organization administered by the AWS account that invokes this API. If you are using AWS Organizations to manage your GuardDuty environment, this step is not needed. For more information, see [Managing accounts with organizations](#).

To invite AWS accounts, the first step is to ensure that GuardDuty has been enabled in the potential member accounts. You can now invoke this API to add accounts by invitation. The invited accounts can either accept or decline the invitation from their GuardDuty accounts. Each invited AWS account can choose to accept the invitation from only one AWS account. For more information, see [Managing GuardDuty accounts by invitation](#).

After the invite has been accepted and you choose to disassociate a member account (by using [DisassociateMembers](#)) from your account, the details of the member account obtained by invoking [CreateMembers](#), including the associated email addresses, will be retained. This is done so that you can invoke [InviteMembers](#) without the need to invoke [CreateMembers](#) again. To remove the details associated with a member account, you must also invoke [DeleteMembers](#).

If you disassociate a member account that was added by invitation, the member account details obtained from this API, including the associated email addresses, will be retained. This is done so that the delegated administrator can invoke the [InviteMembers](#) API without the need to invoke the [CreateMembers](#) API again. To remove the details associated with a member account, the delegated administrator must invoke the [DeleteMembers](#) API.

When the member accounts added through AWS Organizations are later disassociated, you (administrator) can't invite them by calling the [InviteMembers](#) API. You can create an association with these member accounts again only by calling the [CreateMembers](#) API.

## Request Syntax

```
POST /detector/detectorId/member/invite HTTP/1.1
Content-type: application/json

{
  "accountIds": [ "string" ],
  "disableEmailNotification": boolean,
  "message": "string"
}
```

## URI Request Parameters

The request uses the following URI parameters.

### detectorId

The unique ID of the detector of the GuardDuty account with which you want to invite members.

To find the detectorId in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

### accountIds

A list of account IDs of the accounts that you want to invite to GuardDuty as members.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 50 items.

Length Constraints: Fixed length of 12.

Required: Yes

### disableEmailNotification

A Boolean value that specifies whether you want to disable email notification to the accounts that you are inviting to GuardDuty as members.

Type: Boolean

Required: No

### message

The invitation message that you want to send to the accounts that you're inviting to GuardDuty as members.

Type: String

Required: No

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
    "unprocessedAccounts": [
        {
            "accountIdresult": "string"
        }
    ]
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### [unprocessedAccounts](#)

A list of objects that contain the unprocessed account and a result string that explains why it was unprocessed.

Type: Array of [UnprocessedAccount](#) objects

Array Members: Minimum number of 0 items. Maximum number of 50 items.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

## InternalServerErrorException

An internal server error exception object.

HTTP Status Code: 500

## See Also

# ListCoverage

Lists coverage details for your GuardDuty account. If you're a GuardDuty administrator, you can retrieve all resources associated with the active member accounts in your organization.

Make sure the accounts have Runtime Monitoring enabled and GuardDuty agent running on their resources.

## Request Syntax

```
POST /detector/detectorId/coverage HTTP/1.1
Content-type: application/json

{
  "filterCriteria": {
    "filterCriterion": [
      {
        "criterionKey": "string",
        "filterCondition": {
          "equals": [ "string" ],
          "notEquals": [ "string" ]
        }
      }
    ],
    "maxResults": number,
    "nextToken": "string",
    "sortCriteria": {
      "attributeName": "string",
      "orderBy": "string"
    }
  }
}
```

## URI Request Parameters

The request uses the following URI parameters.

### [detectorId](#)

The unique ID of the detector whose coverage details you want to retrieve.

To find the detectorId in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

### [\*\*filterCriteria\*\*](#)

Represents the criteria used to filter the coverage details.

Type: [CoverageFilterCriteria](#) object

Required: No

### [\*\*maxResults\*\*](#)

The maximum number of results to return in the response.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 50.

Required: No

### [\*\*nextToken\*\*](#)

A token to use for paginating results that are returned in the response. Set the value of this parameter to null for the first request to a list action. For subsequent calls, use the NextToken value returned from the previous request to continue listing results after the first page.

Type: String

Required: No

### [\*\*sortCriteria\*\*](#)

Represents the criteria used to sort the coverage details.

Type: [CoverageSortCriteria object](#)

Required: No

## Response Syntax

HTTP/1.1 200  
Content-type: application/json

```
{  
    "nextToken": "string",  
    "resources": [  
        {  
            "accountId": "string",  
            "coverageStatus": "string",  
            "detectorId": "string",  
            "issue": "string",  
            "resourceDetails": {  
                "ec2InstanceDetails": {  
                    "agentDetails": {  
                        "version": "string"  
                    },  
                    "clusterArn": "string",  
                    "instanceId": "string",  
                    "instanceType": "string",  
                    "managementType": "string"  
                },  
                "ecsClusterDetails": {  
                    "clusterName": "string",  
                    "containerInstanceDetails": {  
                        "compatibleContainerInstances": number,  
                        "coveredContainerInstances": number  
                    },  
                    "fargateDetails": {  
                        "issues": [ "string" ],  
                        "managementType": "string"  
                    }  
                },  
                "eksClusterDetails": {  
                    "addonDetails": {  
                        "addonStatus": "string",  
                        "addonVersion": "string"  
                    },  
                    "clusterArn": "string",  
                    "nodeGroupARNs": [ "string" ]  
                }  
            }  
        }  
    ]  
}
```

```
        "clusterName": "string",
        "compatibleNodes": number,
        "coveredNodes": number,
        "managementType": "string"
    },
    "resourceType": "string"
},
"resourceId": "string",
"updatedAt": number
}
]
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### [nextToken](#)

The pagination parameter to be used on the next list operation to retrieve more items.

Type: String

### [resources](#)

A list of resources and their attributes providing cluster details.

Type: Array of [CoverageResource](#) objects

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

### **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

# ListDetectors

Lists detectorIds of all the existing Amazon GuardDuty detector resources.

## Request Syntax

```
GET /detector?maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

## URI Request Parameters

The request uses the following URI parameters.

### MaxResults

You can use this parameter to indicate the maximum number of items that you want in the response. The default value is 50. The maximum value is 50.

Valid Range: Minimum value of 1. Maximum value of 50.

### NextToken

You can use this parameter when paginating results. Set the value of this parameter to null on your first call to the list action. For subsequent calls to the action, fill nextToken in the request with the value of NextToken from the previous response to continue listing data.

## Request Body

The request does not have a request body.

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
  "detectorIdsstring" ],
  "nextTokenstring"
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### **detectorIds**

A list of detector IDs.

Type: Array of strings

Array Members: Minimum number of 0 items. Maximum number of 50 items.

Length Constraints: Minimum length of 1. Maximum length of 300.

### **nextToken**

The pagination parameter to be used on the next list operation to retrieve more items.

Type: String

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

### **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

# ListFilters

Returns a paginated list of the current filters.

## Request Syntax

```
GET /detector/detectorId/filter?maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

## URI Request Parameters

The request uses the following URI parameters.

### detectorId

The unique ID of the detector that is associated with the filter.

To find the `detectorId` in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

### MaxResults

You can use this parameter to indicate the maximum number of items that you want in the response. The default value is 50. The maximum value is 50.

Valid Range: Minimum value of 1. Maximum value of 50.

### NextToken

You can use this parameter when paginating results. Set the value of this parameter to null on your first call to the list action. For subsequent calls to the action, fill `nextToken` in the request with the value of `NextToken` from the previous response to continue listing data.

## Request Body

The request does not have a request body.

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
    "filterNamesnextToken
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### [\*\*filterNames\*\*](#)

A list of filter names.

Type: Array of strings

Array Members: Minimum number of 0 items. Maximum number of 50 items.

Length Constraints: Minimum length of 3. Maximum length of 64.

### [\*\*nextToken\*\*](#)

The pagination parameter to be used on the next list operation to retrieve more items.

Type: String

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

## InternalServerErrorException

An internal server error exception object.

HTTP Status Code: 500

## See Also

# ListFindings

Lists GuardDuty findings for the specified detector ID.

There might be regional differences because some flags might not be available in all the Regions where GuardDuty is currently supported. For more information, see [Regions and endpoints](#).

## Request Syntax

```
POST /detector/detectorId/findings HTTP/1.1
Content-type: application/json

{
  "findingCriteria": {
    "criterion": {
      "string": {
        "eq": [ "string" ],
        "equals": [ "string" ],
        "greaterThan": number,
        "greaterThanOrEqualTo": number,
        "gt": number,
        "gte": number,
        "lessThan": number,
        "lessThanOrEqualTo": number,
        "lt": number,
        "lte": number,
        "neq": [ "string" ],
        "notEquals": [ "string" ]
      }
    }
  },
  "maxResults": number,
  "nextToken": "string",
  "sortCriteria": {
    "attributeName": "string",
    "orderBy": "string"
  }
}
```

## URI Request Parameters

The request uses the following URI parameters.

## detectorId

The ID of the detector that specifies the GuardDuty service whose findings you want to list.

To find the detectorId in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

### findingCriteria

Represents the criteria used for querying findings. Valid values include:

- JSON field name
- accountId
- region
- confidence
- id
- resource.accessKeyDetails.accessKeyId
- resource.accessKeyDetails.principalId
- resource.accessKeyDetails.userName
- resource.accessKeyDetails.userType
- resource.instanceDetails.iamInstanceProfile.id
- resource.instanceDetails.imageId
- resource.instanceDetails.instanceId
- resource.instanceDetails.networkInterfaces.ipv6Addresses
- resource.instanceDetails.networkInterfaces.privateIpAddresses.privateIpAddress
- resource.instanceDetails.networkInterfaces.publicDnsName
- resource.instanceDetails.networkInterfaces.publicIp

- resource.instanceDetails.networkInterfaces.securityGroups.groupId
- resource.instanceDetails.networkInterfaces.securityGroups.groupName
- resource.instanceDetails.networkInterfaces.subnetId
- resource.instanceDetails.networkInterfaces.vpcId
- resource.instanceDetails.tags.key
- resource.instanceDetails.tags.value
- resource.resourceType
- service.action.actionType
- service.action.awsApiCallAction.api
- service.action.awsApiCallAction.callerType
- service.action.awsApiCallAction.remoteIpDetails.city.cityName
- service.action.awsApiCallAction.remoteIpDetails.country.countryName
- service.action.awsApiCallAction.remoteIpDetails.ipAddressV4
- service.action.awsApiCallAction.remoteIpDetails.organization.asn
- service.action.awsApiCallAction.remoteIpDetails.organization.asnOrg
- service.action.awsApiCallAction.serviceName
- service.action.dnsRequestAction.domain
- service.action.dnsRequestAction.domainWithSuffix
- service.action.networkConnectionAction.blocked
- service.action.networkConnectionAction.connectionDirection
- service.action.networkConnectionAction.localPortDetails.port
- service.action.networkConnectionAction.protocol
- service.action.networkConnectionAction.remoteIpDetails.country.countryName
- service.action.networkConnectionAction.remoteIpDetails.ipAddressV4
- service.action.networkConnectionAction.remoteIpDetails.organization.asn
- service.action.networkConnectionAction.remoteIpDetails.organization.asnOrg
- service.action.networkConnectionAction.remotePortDetails.port
- service.additionalInfo.threatListName
- service.archived

When this attribute is set to 'true', only archived findings are listed. When it's set to 'false', only unarchived findings are listed. When this attribute is not set, all existing findings are listed.

- service.ebsVolumeScanDetails.scanId
- service.resourceRole
- severity
- type
- updatedAt

Type: Timestamp in Unix Epoch millisecond format: 1486685375000

Type: [FindingCriteria](#) object

Required: No

### maxResults

You can use this parameter to indicate the maximum number of items you want in the response. The default value is 50. The maximum value is 50.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 50.

Required: No

### nextToken

You can use this parameter when paginating results. Set the value of this parameter to null on your first call to the list action. For subsequent calls to the action, fill nextToken in the request with the value of NextToken from the previous response to continue listing data.

Type: String

Required: No

### sortCriteria

Represents the criteria used for sorting findings.

Type: [SortCriteria](#) object

Required: No

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
    "findingIds": [ "string" ],
    "nextTokenstring"
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### [findingIds](#)

The IDs of the findings that you're listing.

Type: Array of strings

Array Members: Minimum number of 0 items. Maximum number of 50 items.

Length Constraints: Minimum length of 1. Maximum length of 300.

### [nextToken](#)

The pagination parameter to be used on the next list operation to retrieve more items.

Type: String

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

## InternalServerErrorException

An internal server error exception object.

HTTP Status Code: 500

# ListInvitations

Lists all GuardDuty membership invitations that were sent to the current AWS account.

## Request Syntax

```
GET /invitation?maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

## URI Request Parameters

The request uses the following URI parameters.

### MaxResults

You can use this parameter to indicate the maximum number of items that you want in the response. The default value is 50. The maximum value is 50.

Valid Range: Minimum value of 1. Maximum value of 50.

### NextToken

You can use this parameter when paginating results. Set the value of this parameter to null on your first call to the list action. For subsequent calls to the action, fill nextToken in the request with the value of NextToken from the previous response to continue listing data.

## Request Body

The request does not have a request body.

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
    "invitations": [
        {
            "accountId": "string",
            "invitationId": "string",
```

```
        "invitedAt": "string",
        "relationshipStatus": "string"
    }
],
"nextToken": "string"
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### [invitations](#)

A list of invitation descriptions.

Type: Array of [Invitation](#) objects

Array Members: Minimum number of 0 items. Maximum number of 50 items.

### [nextToken](#)

The pagination parameter to be used on the next list operation to retrieve more items.

Type: String

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

### **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

# ListIPSets

Lists the IP Sets of the GuardDuty service specified by the detector ID. If you use this operation from a member account, the IP Sets returned are the IP Sets from the associated administrator account.

## Request Syntax

```
GET /detector/detectorId/ipset?maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

## URI Request Parameters

The request uses the following URI parameters.

### detectorId

The unique ID of the detector that is associated with IPSet.

To find the `detectorId` in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

### MaxResults

You can use this parameter to indicate the maximum number of items you want in the response. The default value is 50. The maximum value is 50.

Valid Range: Minimum value of 1. Maximum value of 50.

### NextToken

You can use this parameter when paginating results. Set the value of this parameter to null on your first call to the list action. For subsequent calls to the action, fill `nextToken` in the request with the value of `NextToken` from the previous response to continue listing data.

## Request Body

The request does not have a request body.

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
    "ipSetIds": [ "string" ],
    "nextTokenstring"
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### [ipSetIds](#)

The IDs of the IPSet resources.

Type: Array of strings

Array Members: Minimum number of 0 items. Maximum number of 50 items.

### [nextToken](#)

The pagination parameter to be used on the next list operation to retrieve more items.

Type: String

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

### **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

# ListMalwareProtectionPlans

Lists the Malware Protection plan IDs associated with the protected resources in your AWS account.

## Request Syntax

```
GET /malware-protection-plan?nextToken=NextToken HTTP/1.1
```

## URI Request Parameters

The request uses the following URI parameters.

### NextToken

You can use this parameter when paginating results. Set the value of this parameter to null on your first call to the list action. For subsequent calls to the action, fill nextToken in the request with the value of NextToken from the previous response to continue listing data.

## Request Body

The request does not have a request body.

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
  "malwareProtectionPlans": [
    {
      "malwareProtectionPlanIdstring"
    }
  ],
  "nextTokenstring"
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

## **malwareProtectionPlans**

A list of unique identifiers associated with each Malware Protection plan.

Type: Array of [MalwareProtectionPlanSummary](#) objects

## **nextToken**

You can use this parameter when paginating results. Set the value of this parameter to null on your first call to the list action. For subsequent calls to the action, fill nextToken in the request with the value of NextToken from the previous response to continue listing data.

Type: String

## **Errors**

For information about the errors that are common to all actions, see [Common Errors](#).

### **AccessDeniedException**

An access denied exception object.

HTTP Status Code: 403

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

### **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

# ListMembers

Lists details about all member accounts for the current GuardDuty administrator account.

## Request Syntax

```
GET /detector/detectorId/member?  
maxResults=MaxResults&nextToken=NextToken&onlyAssociated=OnlyAssociated HTTP/1.1
```

## URI Request Parameters

The request uses the following URI parameters.

### detectorId

The unique ID of the detector that is associated with the member.

To find the `detectorId` in the current Region, see the [Settings](#) page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

### MaxResults

You can use this parameter to indicate the maximum number of items you want in the response. The default value is 50. The maximum value is 50.

Valid Range: Minimum value of 1. Maximum value of 50.

### NextToken

You can use this parameter when paginating results. Set the value of this parameter to null on your first call to the list action. For subsequent calls to the action, fill `nextToken` in the request with the value of `NextToken` from the previous response to continue listing data.

### OnlyAssociated

Specifies whether to only return associated members or to return all members (including members who haven't been invited yet or have been disassociated). Member accounts must have been previously associated with the GuardDuty administrator account using [Create Members](#).

## Request Body

The request does not have a request body.

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
    "members": [
        {
            "accountId": "string",
            "administratorId": "string",
            "detectorId": "string",
            "email": "string",
            "invitedAt": "string",
            "masterId": "string",
            "relationshipStatus": "string",
            "updatedAt": "string"
        }
    ],
    "nextToken": "string"
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### members

A list of members.

 **Note**

The values for `email` and `invitedAt` are available only if the member accounts are added by invitation.

Type: Array of [Member](#) objects

Array Members: Minimum number of 0 items. Maximum number of 50 items.

## nextToken

The pagination parameter to be used on the next list operation to retrieve more items.

Type: String

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

### **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

# ListOrganizationAdminAccounts

Lists the accounts designated as GuardDuty delegated administrators. Only the organization's management account can run this API operation.

## Request Syntax

```
GET /admin?maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

## URI Request Parameters

The request uses the following URI parameters.

### MaxResults

The maximum number of results to return in the response.

Valid Range: Minimum value of 1. Maximum value of 50.

### NextToken

A token to use for paginating results that are returned in the response. Set the value of this parameter to null for the first request to a list action. For subsequent calls, use the NextToken value returned from the previous request to continue listing results after the first page.

## Request Body

The request does not have a request body.

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
    "adminAccounts": [
        {
            "adminAccountId": "string",
            "adminStatus": "string"
        }
    ],
}
```

```
    "nextToken": "string"  
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### [adminAccounts](#)

A list of accounts configured as GuardDuty delegated administrators.

Type: Array of [AdminAccount](#) objects

Array Members: Minimum number of 0 items. Maximum number of 1 item.

### [nextToken](#)

The pagination parameter to be used on the next list operation to retrieve more items.

Type: String

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

### **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

# ListPublishingDestinations

Returns a list of publishing destinations associated with the specified detectorId.

## Request Syntax

```
GET /detector/detectorId/publishingDestination?  
maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

## URI Request Parameters

The request uses the following URI parameters.

### detectorId

The detector ID for which you want to retrieve the publishing destination.

To find the detectorId in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

### MaxResults

The maximum number of results to return in the response.

Valid Range: Minimum value of 1. Maximum value of 50.

### NextToken

A token to use for paginating results that are returned in the response. Set the value of this parameter to null for the first request to a list action. For subsequent calls, use the NextToken value returned from the previous request to continue listing results after the first page.

## Request Body

The request does not have a request body.

## Response Syntax

```
HTTP/1.1 200
```

Content-type: application/json

```
{  
    "destinations": [  
        {  
            "destinationId            "destinationType": "string",  
            "status": "string"  
        }  
    \],  
    "nextToken": "string"  
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### [\*\*destinations\*\*](#)

A Destinations object that includes information about each publishing destination returned.

Type: Array of [Destination](#) objects

### [\*\*nextToken\*\*](#)

A token to use for paginating results that are returned in the response. Set the value of this parameter to null for the first request to a list action. For subsequent calls, use the NextToken value returned from the previous request to continue listing results after the first page.

Type: String

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

## InternalServerErrorException

An internal server error exception object.

HTTP Status Code: 500

## See Also

## ListTagsForResource

Lists tags for a resource. Tagging is currently supported for detectors, finding filters, IP sets, threat intel sets, and publishing destination, with a limit of 50 tags per resource. When invoked, this operation returns all assigned tags for a given resource.

### Request Syntax

```
GET /tags/resourceArn HTTP/1.1
```

### URI Request Parameters

The request uses the following URI parameters.

#### resourceArn

The Amazon Resource Name (ARN) for the given GuardDuty resource.

Pattern: ^arn:[A-Za-z\_.-]{1,20}:guardduty:[A-Za-z0-9\_/.-]{0,63}:\d+:detector/[A-Za-z0-9\_/.-]{32,264}\$

Required: Yes

### Request Body

The request does not have a request body.

### Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
  "tags" : {
    "string" : "string"
  }
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### tags

The tags associated with the resource.

Type: String to string map

Map Entries: Maximum number of 200 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: ^(?!\aws:)[a-zA-Z+-=.\_:/]+\$

Value Length Constraints: Maximum length of 256.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **AccessDeniedException**

An access denied exception object.

HTTP Status Code: 403

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

### **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

- [AWS SDK for Ruby V3](#)

## ListThreatIntelSets

Lists the ThreatIntelSets of the GuardDuty service specified by the detector ID. If you use this operation from a member account, the ThreatIntelSets associated with the administrator account are returned.

### Request Syntax

```
GET /detector/detectorId/threatintelset?maxResults=MaxResults&nextToken=NextToken
HTTP/1.1
```

### URI Request Parameters

The request uses the following URI parameters.

#### detectorId

The unique ID of the detector that is associated with the threatIntelSet.

To find the `detectorId` in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

#### MaxResults

You can use this parameter to indicate the maximum number of items that you want in the response. The default value is 50. The maximum value is 50.

Valid Range: Minimum value of 1. Maximum value of 50.

#### NextToken

You can use this parameter to paginate results in the response. Set the value of this parameter to null on your first call to the list action. For subsequent calls to the action, fill `nextToken` in the request with the value of `NextToken` from the previous response to continue listing data.

### Request Body

The request does not have a request body.

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
    "nextTokenthreatIntelSetIds
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### [nextToken](#)

The pagination parameter to be used on the next list operation to retrieve more items.

Type: String

### [threatIntelSetIds](#)

The IDs of the ThreatIntelSet resources.

Type: Array of strings

Array Members: Minimum number of 0 items. Maximum number of 50 items.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

### **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

## See Also

## StartMalwareScan

Initiates the malware scan. Invoking this API will automatically create the [Service-linked role](#) in the corresponding account.

When the malware scan starts, you can use the associated scan ID to track the status of the scan. For more information, see [DescribeMalwareScans](#).

## Request Syntax

```
POST /malware-scan/start HTTP/1.1
Content-type: application/json

{
    "resourceArn
```

## URI Request Parameters

The request does not use any URI parameters.

## Request Body

The request accepts the following data in JSON format.

### resourceArn

Amazon Resource Name (ARN) of the resource for which you invoked the API.

Type: String

Pattern: ^arn:[A-Za-z-]+:[A-Za-z0-9]+:[A-Za-z0-9-]+:\d+(([A-Za-z0-9-]+[:\\/]?)?[A-Za-z0-9-]\*\$

Required: Yes

## Response Syntax

```
HTTP/1.1 200
```

```
Content-type: application/json
```

```
{  
    "scanId": "string"  
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### scanId

A unique identifier that gets generated when you invoke the API without any error. Each malware scan has a corresponding scan ID. Using this scan ID, you can monitor the status of your malware scan.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 200.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

### **ConflictException**

A request conflict exception object.

HTTP Status Code: 409

### **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

# StartMonitoringMembers

Turns on GuardDuty monitoring of the specified member accounts. Use this operation to restart monitoring of accounts that you stopped monitoring with the [StopMonitoringMembers](#) operation.

## Request Syntax

```
POST /detector/detectorId/member/start HTTP/1.1
Content-type: application/json

{
    "accountIdsstring" ]
}
```

## URI Request Parameters

The request uses the following URI parameters.

### detectorId

The unique ID of the detector of the GuardDuty administrator account associated with the member accounts to monitor.

To find the detectorId in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

### accountIds

A list of account IDs of the GuardDuty member accounts to start monitoring.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 50 items.

Length Constraints: Fixed length of 12.

Required: Yes

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
    "unprocessedAccounts": [
        {
            "accountIdresult": "string"
        }
    ]
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### [unprocessedAccounts](#)

A list of objects that contain the unprocessed account and a result string that explains why it was unprocessed.

Type: Array of [UnprocessedAccount](#) objects

Array Members: Minimum number of 0 items. Maximum number of 50 items.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

## InternalServerErrorException

An internal server error exception object.

HTTP Status Code: 500

## See Also

# StopMonitoringMembers

Stops GuardDuty monitoring for the specified member accounts. Use the `StartMonitoringMembers` operation to restart monitoring for those accounts.

With `autoEnableOrganizationMembers` configuration for your organization set to ALL, you'll receive an error if you attempt to stop monitoring the member accounts in your organization.

## Request Syntax

```
POST /detector/detectorId/member/stop HTTP/1.1
Content-type: application/json

{
    "accountIdsstring" ]
}
```

## URI Request Parameters

The request uses the following URI parameters.

### detectorId

The unique ID of the detector associated with the GuardDuty administrator account that is monitoring member accounts.

To find the `detectorId` in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

### accountIds

A list of account IDs for the member accounts to stop monitoring.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 50 items.

Length Constraints: Fixed length of 12.

Required: Yes

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
    "unprocessedAccounts": [
        {
            "accountIdresult": "string"
        }
    ]
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### [unprocessedAccounts](#)

A list of objects that contain an accountId for each account that could not be processed, and a result string that indicates why the account was not processed.

Type: Array of [UnprocessedAccount](#) objects

Array Members: Minimum number of 0 items. Maximum number of 50 items.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

## BadRequestException

A bad request exception object.

HTTP Status Code: 400

## InternalServerErrorException

An internal server error exception object.

HTTP Status Code: 500

## See Also

# TagResource

Adds tags to a resource.

## Request Syntax

```
POST /tags/resourceArn HTTP/1.1
Content-type: application/json

{
  "tags": {
    "string": "string"
  }
}
```

## URI Request Parameters

The request uses the following URI parameters.

### resourceArn

The Amazon Resource Name (ARN) for the GuardDuty resource to apply a tag to.

Pattern: ^arn:[A-Za-z\_.-]{1,20}:guardduty:[A-Za-z0-9\_.-]{0,63}:\d+:detector/[A-Za-z0-9\_.-]{32,264}\$

Required: Yes

## Request Body

The request accepts the following data in JSON format.

### tags

The tags to be added to a resource.

Type: String to string map

Map Entries: Maximum number of 200 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:)[a-zA-Z+=._:/]+$`

Value Length Constraints: Maximum length of 256.

Required: Yes

## Response Syntax

HTTP/1.1 204

## Response Elements

If the action is successful, the service sends back an HTTP 204 response with an empty HTTP body.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### AccessDeniedException

An access denied exception object.

HTTP Status Code: 403

### BadRequestException

A bad request exception object.

HTTP Status Code: 400

### InternalServerErrorException

An internal server error exception object.

HTTP Status Code: 500

## See Also

# UnarchiveFindings

Unarchives GuardDuty findings specified by the `findingIds`.

## Request Syntax

```
POST /detector/detectorId/findings/unarchive HTTP/1.1
Content-type: application/json

{
    "findingIds
```

## URI Request Parameters

The request uses the following URI parameters.

### detectorId

The ID of the detector associated with the findings to unarchive.

To find the `detectorId` in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

### findingIds

The IDs of the findings to unarchive.

Type: Array of strings

Array Members: Minimum number of 0 items. Maximum number of 50 items.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Response Syntax

HTTP/1.1 200

## Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### BadRequestException

A bad request exception object.

HTTP Status Code: 400

### InternalServerErrorException

An internal server error exception object.

HTTP Status Code: 500

# UntagResource

Removes tags from a resource.

## Request Syntax

```
DELETE /tags/resourceArn?tagKeys=TagKeys HTTP/1.1
```

## URI Request Parameters

The request uses the following URI parameters.

### resourceArn

The Amazon Resource Name (ARN) for the resource to remove tags from.

Pattern: ^arn:[A-Za-z\_.-]{1,20}:guardduty:[A-Za-z0-9\_/.-]{0,63}:\d+:detector/[A-Za-z0-9\_/.-]{32,264}\$

Required: Yes

### TagKeys

The tag keys to remove from the resource.

Array Members: Minimum number of 1 item. Maximum number of 200 items.

Length Constraints: Minimum length of 1. Maximum length of 128.

Pattern: ^(? !aws : )[a-zA-Z+-=.\_:/]+\$

Required: Yes

## Request Body

The request does not have a request body.

## Response Syntax

```
HTTP/1.1 204
```

## Response Elements

If the action is successful, the service sends back an HTTP 204 response with an empty HTTP body.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### AccessDeniedException

An access denied exception object.

HTTP Status Code: 403

### BadRequestException

A bad request exception object.

HTTP Status Code: 400

### InternalServerErrorException

An internal server error exception object.

HTTP Status Code: 500

# UpdateDetector

Updates the GuardDuty detector specified by the detector ID.

Specifying both EKS Runtime Monitoring (EKS\_RUNTIME\_MONITORING) and Runtime Monitoring (RUNTIME\_MONITORING) will cause an error. You can add only one of these two features because Runtime Monitoring already includes the threat detection for Amazon EKS resources. For more information, see [Runtime Monitoring](#).

There might be regional differences because some data sources might not be available in all the AWS Regions where GuardDuty is presently supported. For more information, see [Regions and endpoints](#).

## Request Syntax

```
POST /detector/detectorId HTTP/1.1
Content-type: application/json

{
  "dataSourceskubernetesauditLogsenableboolean
      }
    },
    "malwareProtectionscanEc2InstanceWithFindingsebsVolumesboolean
      }
    },
    "s3Logsenableboolean
    }
  },
  "enableboolean,
  "featuresadditionalConfigurationnamestring",
          "statusstring"
        }
      ]
    }
  ]
}
```

```
        ],
        "name": "string",
        "status": "string"
    }
],
"findingPublishingFrequency": "string"
}
```

## URI Request Parameters

The request uses the following URI parameters.

### [detectorId](#)

The unique ID of the detector to update.

To find the detectorId in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

### [dataSources](#)

*This parameter has been deprecated.*

Describes which data sources will be updated.

There might be regional differences because some data sources might not be available in all the AWS Regions where GuardDuty is presently supported. For more information, see [Regions and endpoints](#).

Type: [DataSourceConfigurations](#) object

Required: No

## enable

Specifies whether the detector is enabled or not enabled.

Type: Boolean

Required: No

## features

Provides the features that will be updated for the detector.

Type: Array of [DetectorFeatureConfiguration](#) objects

Required: No

## findingPublishingFrequency

An enum value that specifies how frequently findings are exported, such as to CloudWatch Events.

Type: String

Valid Values: FIFTEEN\_MINUTES | ONE\_HOUR | SIX\_HOURS

Required: No

## Response Syntax

HTTP/1.1 200

## Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### BadRequestException

A bad request exception object.

HTTP Status Code: 400

## InternalServerErrorException

An internal server error exception object.

HTTP Status Code: 500

## See Also

# UpdateFilter

Updates the filter specified by the filter name.

## Request Syntax

```
POST /detector/detectorId/filter/filterName HTTP/1.1
Content-type: application/json

{
    "action": "string",
    "description": "string",
    "findingCriteria": {
        "criterion": {
            "string": {
                "eq": [ "string" ],
                "equals": [ "string" ],
                "greaterThan": number,
                "greaterThanOrEqualTo": number,
                "gt": number,
                "gte": number,
                "lessThan": number,
                "lessThanOrEqualTo": number,
                "lt": number,
                "lte": number,
                "neq": [ "string" ],
                "notEquals": [ "string" ]
            }
        }
    },
    "rank": number
}
```

## URI Request Parameters

The request uses the following URI parameters.

### [detectorId](#)

The unique ID of the detector that specifies the GuardDuty service where you want to update a filter.

To find the detectorId in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

### [filterName](#)

The name of the filter.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

### [action](#)

Specifies the action that is to be applied to the findings that match the filter.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

Valid Values: NOOP | ARCHIVE

Required: No

### [description](#)

The description of the filter. Valid characters include alphanumeric characters, and special characters such as hyphen, period, colon, underscore, parentheses ({ }, [ ], and ( )), forward slash, horizontal tab, vertical tab, newline, form feed, return, and whitespace.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 512.

Required: No

### [findingCriteria](#)

Represents the criteria to be used in the filter for querying findings.

Type: [FindingCriteria object](#)

Required: No

### rank

Specifies the position of the filter in the list of current filters. Also specifies the order in which this filter is applied to the findings.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
    "name": "string"
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### name

The name of the filter.

Type: String

Length Constraints: Minimum length of 3. Maximum length of 64.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

## BadRequestException

A bad request exception object.

HTTP Status Code: 400

## InternalServerErrorException

An internal server error exception object.

HTTP Status Code: 500

## See Also

# UpdateFindingsFeedback

Marks the specified GuardDuty findings as useful or not useful.

## Request Syntax

```
POST /detector/detectorId/findings/feedback HTTP/1.1
Content-type: application/json

{
    "commentsfeedbackfindingIds
```

## URI Request Parameters

The request uses the following URI parameters.

### detectorId

The ID of the detector that is associated with the findings for which you want to update the feedback.

To find the detectorId in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

### comments

Additional feedback about the GuardDuty findings.

Type: String

Required: No

### [feedback](#)

The feedback for the finding.

Type: String

Valid Values: USEFUL | NOT\_USEFUL

Required: Yes

### [findingIds](#)

The IDs of the findings that you want to mark as useful or not useful.

Type: Array of strings

Array Members: Minimum number of 0 items. Maximum number of 50 items.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Response Syntax

HTTP/1.1 200

## Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

## InternalServerErrorException

An internal server error exception object.

HTTP Status Code: 500

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

# UpdateIPSet

Updates the IPSet specified by the IPSet ID.

## Request Syntax

```
POST /detector/detectorId/ipset/ipSetId HTTP/1.1
Content-type: application/json

{
  "activate": boolean,
  "expectedBucketOwner": "string",
  "location": "string",
  "name": "string"
}
```

## URI Request Parameters

The request uses the following URI parameters.

### [detectorId](#)

The detectorID that specifies the GuardDuty service whose IPSet you want to update.

To find the detectorId in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

### [ipSetId](#)

The unique ID that specifies the IPSet that you want to update.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

## activate

The updated Boolean value that specifies whether the IPSet is active or not.

Type: Boolean

Required: No

## expectedBucketOwner

The AWS account ID that owns the Amazon S3 bucket specified in the **location** parameter.

Type: String

Length Constraints: Fixed length of 12.

Required: No

## location

The updated URI of the file that contains the IPSet.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: No

## name

The unique ID that specifies the IPSet that you want to update.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: No

## Response Syntax

HTTP/1.1 200

## Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### AccessDeniedException

An access denied exception object.

HTTP Status Code: 403

### BadRequestException

A bad request exception object.

HTTP Status Code: 400

### InternalServerErrorException

An internal server error exception object.

HTTP Status Code: 500

# UpdateMalwareProtectionPlan

Updates an existing Malware Protection plan resource.

## Request Syntax

```
PATCH /malware-protection-plan/malwareProtectionPlanId HTTP/1.1
Content-type: application/json

{
  "actions": {
    "tagging": {
      "status": "string"
    }
  },
  "protectedResource": {
    "s3Bucket": {
      "objectPrefixes": [ "string" ]
    }
  },
  "role": "string"
}
```

## URI Request Parameters

The request uses the following URI parameters.

### [malwareProtectionPlanId](#)

A unique identifier associated with the Malware Protection plan.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

### [actions](#)

Information about whether the tags will be added to the S3 object after scanning.

Type: [MalwareProtectionPlanActions](#) object

Required: No

### [protectedResource](#)

Information about the protected resource that is associated with the created Malware Protection plan. Presently, S3Bucket is the only supported protected resource.

Type: [UpdateProtectedResource](#) object

Required: No

### [role](#)

Amazon Resource Name (ARN) of the IAM role with permissions to scan and add tags to the associated protected resource.

Type: String

Required: No

## Response Syntax

HTTP/1.1 200

## Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **AccessDeniedException**

An access denied exception object.

HTTP Status Code: 403

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

## **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

## **ResourceNotFoundException**

The requested resource can't be found.

HTTP Status Code: 404

## **See Also**

# UpdateMalwareScanSettings

Updates the malware scan settings.

There might be regional differences because some data sources might not be available in all the AWS Regions where GuardDuty is presently supported. For more information, see [Regions and endpoints](#).

## Request Syntax

```
POST /detector/detectorId/malware-scan-settings HTTP/1.1
Content-type: application/json

{
    "ebsSnapshotPreservationscanResourceCriteriaexcludemapEqualskeyvalueincludemapEqualskeyvalue
```

## URI Request Parameters

The request uses the following URI parameters.

## detectorId

The unique ID of the detector that specifies the GuardDuty service where you want to update scan settings.

To find the `detectorId` in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

### ebsSnapshotPreservation

An enum value representing possible snapshot preservation settings.

Type: String

Valid Values: NO\_RETENTION | RETENTION\_WITH\_FINDING

Required: No

### scanResourceCriteria

Represents the criteria to be used in the filter for selecting resources to scan.

Type: [ScanResourceCriteria](#) object

Required: No

## Response Syntax

HTTP/1.1 200

## Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### BadRequestException

A bad request exception object.

HTTP Status Code: 400

### InternalServerErrorException

An internal server error exception object.

HTTP Status Code: 500

# UpdateMemberDetectors

Contains information on member accounts to be updated.

Specifying both EKS Runtime Monitoring (EKS\_RUNTIME\_MONITORING) and Runtime Monitoring (RUNTIME\_MONITORING) will cause an error. You can add only one of these two features because Runtime Monitoring already includes the threat detection for Amazon EKS resources. For more information, see [Runtime Monitoring](#).

There might be regional differences because some data sources might not be available in all the AWS Regions where GuardDuty is presently supported. For more information, see [Regions and endpoints](#).

## Request Syntax

```
POST /detector/detectorId/member/detector/update HTTP/1.1
Content-type: application/json
```

```
{
  "accountIdsdataSourceskubernetesauditLogsenablemalwareProtectionscanEc2InstanceWithFindingsebsVolumess3LogsenablefeaturesadditionalConfigurationnamestatus
```

```
        ],
        "name": "string",
        "status": "string"
    }
]
}
```

## URI Request Parameters

The request uses the following URI parameters.

### [detectorId](#)

The detector ID of the administrator account.

To find the `detectorId` in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

### [accountIds](#)

A list of member account IDs to be updated.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 50 items.

Length Constraints: Fixed length of 12.

Required: Yes

### [dataSources](#)

*This parameter has been deprecated.*

Describes which data sources will be updated.

Type: [DataSourceConfigurations](#) object

Required: No

## features

A list of features that will be updated for the specified member accounts.

Type: Array of [MemberFeaturesConfiguration](#) objects

Required: No

## Response Syntax

```
HTTP/1.1 200
Content-type: application/json
```

```
{
  "unprocessedAccountsaccountId: "string",
      "result
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

### unprocessedAccounts

A list of member account IDs that were unable to be processed along with an explanation for why they were not processed.

Type: Array of [UnprocessedAccount](#) objects

Array Members: Minimum number of 0 items. Maximum number of 50 items.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### BadRequestException

A bad request exception object.

HTTP Status Code: 400

### InternalServerErrorException

An internal server error exception object.

HTTP Status Code: 500

## See Also

# UpdateOrganizationConfiguration

Configures the delegated administrator account with the provided values. You must provide a value for either autoEnableOrganizationMembers or autoEnable, but not both.

Specifying both EKS Runtime Monitoring (EKS\_RUNTIME\_MONITORING) and Runtime Monitoring (RUNTIME\_MONITORING) will cause an error. You can add only one of these two features because Runtime Monitoring already includes the threat detection for Amazon EKS resources. For more information, see [Runtime Monitoring](#).

There might be regional differences because some data sources might not be available in all the AWS Regions where GuardDuty is presently supported. For more information, see [Regions and endpoints](#).

## Request Syntax

```
POST /detector/detectorId/admin HTTP/1.1
Content-type: application/json

{
    "autoEnable": boolean,
    "autoEnableOrganizationMembers": "string",
    "dataSources": {
        "kubernetes": {
            "auditLogs": {
                "autoEnable": boolean
            }
        },
        "malwareProtection": {
            "scanEc2InstanceWithFindings": {
                "ebsVolumes": {
                    "autoEnable": boolean
                }
            }
        },
        "s3Logs": {
            "autoEnable": boolean
        }
    },
    "features": [
        {
            "additionalConfiguration": [

```

```
        {
            "autoEnable": "string",
            "name": "string"
        }
    ],
    "autoEnable": "string",
    "name": "string"
}
]
```

## URI Request Parameters

The request uses the following URI parameters.

### [detectorId](#)

The ID of the detector that configures the delegated administrator.

To find the `detectorId` in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

### [autoEnable](#)

*This parameter has been deprecated.*

Represents whether to automatically enable member accounts in the organization. This applies to only new member accounts, not the existing member accounts. When a new account joins the organization, the chosen features will be enabled for them by default.

Even though this is still supported, we recommend using `AutoEnableOrganizationMembers` to achieve the similar results. You must provide a value for either `autoEnableOrganizationMembers` or `autoEnable`.

Type: Boolean

Required: No

### [autoEnableOrganizationMembers](#)

Indicates the auto-enablement configuration of GuardDuty for the member accounts in the organization. You must provide a value for either `autoEnableOrganizationMembers` or `autoEnable`.

Use one of the following configuration values for `autoEnableOrganizationMembers`:

- NEW: Indicates that when a new account joins the organization, they will have GuardDuty enabled automatically.
- ALL: Indicates that all accounts in the organization have GuardDuty enabled automatically. This includes NEW accounts that join the organization and accounts that may have been suspended or removed from the organization in GuardDuty.

It may take up to 24 hours to update the configuration for all the member accounts.

- NONE: Indicates that GuardDuty will not be automatically enabled for any account in the organization. The administrator must manage GuardDuty for each account in the organization individually.

When you update the auto-enable setting from ALL or NEW to NONE, this action doesn't disable the corresponding option for your existing accounts. This configuration will apply to the new accounts that join the organization. After you update the auto-enable settings, no new account will have the corresponding option as enabled.

Type: String

Valid Values: NEW | ALL | NONE

Required: No

### [dataSources](#)

*This parameter has been deprecated.*

Describes which data sources will be updated.

Type: [OrganizationDataSourceConfigurations](#) object

Required: No

## features

A list of features that will be configured for the organization.

Type: Array of [OrganizationFeatureConfiguration](#) objects

Required: No

## Response Syntax

HTTP/1.1 200

## Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

### **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

## See Also

# UpdatePublishingDestination

Updates information about the publishing destination specified by the `destinationId`.

## Request Syntax

```
POST /detector/detectorId/publishingDestination/destinationId HTTP/1.1
Content-type: application/json

{
  "destinationPropertiesdestinationArnstring",
    "kmsKeyArnstring"
  }
}
```

## URI Request Parameters

The request uses the following URI parameters.

### destinationId

The ID of the publishing destination to update.

Required: Yes

### detectorId

The ID of the detector associated with the publishing destinations to update.

To find the `detectorId` in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

## **destinationProperties**

A DestinationProperties object that includes the DestinationArn and KmsKeyArn of the publishing destination.

Type: [DestinationProperties](#) object

Required: No

## **Response Syntax**

HTTP/1.1 200

## **Response Elements**

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

## **Errors**

For information about the errors that are common to all actions, see [Common Errors](#).

### **BadRequestException**

A bad request exception object.

HTTP Status Code: 400

### **InternalServerErrorException**

An internal server error exception object.

HTTP Status Code: 500

## **See Also**

# UpdateThreatIntelSet

Updates the ThreatIntelSet specified by the ThreatIntelSet ID.

## Request Syntax

```
POST /detector/detectorId/threatintelset/threatIntelSetId HTTP/1.1
Content-type: application/json

{
  "activate": boolean,
  "expectedBucketOwner": "string",
  "location": "string",
  "name": "string"
}
```

## URI Request Parameters

The request uses the following URI parameters.

### [detectorId](#)

The detectorID that specifies the GuardDuty service whose ThreatIntelSet you want to update.

To find the detectorId in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: Yes

### [threatIntelSetId](#)

The unique ID that specifies the ThreatIntelSet that you want to update.

Required: Yes

## Request Body

The request accepts the following data in JSON format.

## activate

The updated Boolean value that specifies whether the ThreatIntelSet is active or not.

Type: Boolean

Required: No

## expectedBucketOwner

The AWS account ID that owns the Amazon S3 bucket specified in the **location** parameter.

Type: String

Length Constraints: Fixed length of 12.

Required: No

## location

The updated URI of the file that contains the ThreatIntelSet.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: No

## name

The unique ID that specifies the ThreatIntelSet that you want to update.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: No

## Response Syntax

HTTP/1.1 200

## Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### AccessDeniedException

An access denied exception object.

HTTP Status Code: 403

### BadRequestException

A bad request exception object.

HTTP Status Code: 400

### InternalServerErrorException

An internal server error exception object.

HTTP Status Code: 500

# Data Types

The Amazon GuardDuty API contains several data types that various actions use. This section describes each data type in detail.

 **Note**

The order of each element in a data type structure is not guaranteed. Applications should not assume a particular order.

The following data types are supported:

- [AccessControlList](#)
- [AccessKey](#)
- [AccessKeyDetails](#)
- [Account](#)
- [AccountDetail](#)
- [AccountFreeTrialInfo](#)
- [AccountLevelPermissions](#)
- [AccountStatistics](#)
- [Action](#)
- [Actor](#)
- [ActorProcess](#)
- [AddonDetails](#)
- [AdminAccount](#)
- [Administrator](#)
- [AgentDetails](#)
- [Anomaly](#)
- [AnomalyObject](#)
- [AnomalyUnusual](#)
- [AutonomousSystem](#)
- [AwsApiCallAction](#)

- [BlockPublicAccess](#)
- [BucketLevelPermissions](#)
- [BucketPolicy](#)
- [City](#)
- [CloudTrailConfigurationResult](#)
- [Condition](#)
- [Container](#)
- [ContainerFindingResource](#)
- [ContainerInstanceDetails](#)
- [Country](#)
- [CoverageEc2InstanceDetails](#)
- [CoverageEcsClusterDetails](#)
- [CoverageEksClusterDetails](#)
- [CoverageFilterCondition](#)
- [CoverageFilterCriteria](#)

# AccessControlList

Contains information on the current access control policies for the bucket.

## Contents

### **allowsPublicReadAccess**

A value that indicates whether public read access for the bucket is enabled through an Access Control List (ACL).

Type: Boolean

Required: No

### **allowsPublicWriteAccess**

A value that indicates whether public write access for the bucket is enabled through an Access Control List (ACL).

Type: Boolean

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# AccessKey

Contains information about the access keys.

## Contents

### **principalId**

Principal ID of the user.

Type: String

Required: No

### **userName**

Name of the user.

Type: String

Required: No

### **userType**

Type of the user.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# AccessKeyDetails

Contains information about the access keys.

## Contents

### accessKeyId

The access key ID of the user.

Type: String

Required: No

### principalId

The principal ID of the user.

Type: String

Required: No

### userName

The name of the user.

Type: String

Required: No

### userType

The type of the user.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)

- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# Account

Contains information about the account.

## Contents

### **uid**

ID of the member's AWS account

Type: String

Required: Yes

### **account**

Name of the member's AWS account.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# AccountDetail

Contains information about the account.

## Contents

### accountId

The member account ID.

Type: String

Length Constraints: Fixed length of 12.

Required: Yes

### email

The email address of the member account.

The rules for a valid email address:

- The email address must be a minimum of 6 and a maximum of 64 characters long.
- All characters must be 7-bit ASCII characters.
- There must be one and only one @ symbol, which separates the local name from the domain name.
- The local name can't contain any of the following characters:

whitespace, " ' ( ) < [ ] : ' , \ | % &

- The local name can't begin with a dot (.)
- The domain name can consist of only the characters [a-z], [A-Z], [0-9], hyphen (-), or dot (.)
- The domain name can't begin or end with a dot (.) or hyphen (-)
- The domain name must contain at least one dot

Type: String

Length Constraints: Minimum length of 6. Maximum length of 64.

Pattern: See rules in parameter description

Required: Yes

## See Also

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# AccountFreeTrialInfo

Provides details of the GuardDuty member account that uses a free trial service.

## Contents

### accountId

The account identifier of the GuardDuty member account.

Type: String

Required: No

### dataSources

*This member has been deprecated.*

Describes the data source enabled for the GuardDuty member account.

Type: [DataSourcesFreeTrial](#) object

Required: No

### features

A list of features enabled for the GuardDuty account.

Type: Array of [FreeTrialFeatureConfigurationResult](#) objects

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# AccountLevelPermissions

Contains information about the account level permissions on the S3 bucket.

## Contents

### blockPublicAccess

Describes the S3 Block Public Access settings of the bucket's parent account.

Type: [BlockPublicAccess](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# AccountStatistics

Represents a list of map of accounts with the number of findings associated with each account.

## Contents

### accountId

The ID of the AWS account.

Type: String

Required: No

### lastGeneratedAt

The timestamp at which the finding for this account was last generated.

Type: Timestamp

Required: No

### totalFindings

The total number of findings associated with an account.

Type: Integer

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# Action

Contains information about actions.

## Contents

### **actionType**

The GuardDuty finding activity type.

Type: String

Required: No

### **awsApiCallAction**

Information about the AWS\_API\_CALL action described in this finding.

Type: [AwsApiCallAction](#) object

Required: No

### **dnsRequestAction**

Information about the DNS\_REQUEST action described in this finding.

Type: [DnsRequestAction](#) object

Required: No

### **kubernetesApiCallAction**

Information about the Kubernetes API call action described in this finding.

Type: [KubernetesApiCallAction](#) object

Required: No

### **kubernetesPermissionCheckedDetails**

Information whether the user has the permission to use a specific Kubernetes API.

Type: [KubernetesPermissionCheckedDetails](#) object

Required: No

## kubernetesRoleBindingDetails

Information about the role binding that grants the permission defined in a Kubernetes role.

Type: [KubernetesRoleBindingDetails](#) object

Required: No

## kubernetesRoleDetails

Information about the Kubernetes role name and role type.

Type: [KubernetesRoleDetails](#) object

Required: No

## networkConnectionAction

Information about the NETWORK\_CONNECTION action described in this finding.

Type: [NetworkConnectionAction](#) object

Required: No

## portProbeAction

Information about the PORT\_PROBE action described in this finding.

Type: [PortProbeAction](#) object

Required: No

## rdsLoginAttemptAction

Information about RDS\_LOGIN\_ATTEMPT action described in this finding.

Type: [RdsLoginAttemptAction](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# Actor

Information about the actors involved in an attack sequence.

## Contents

### **id**

ID of the threat actor.

Type: String

Required: Yes

### **process**

Contains information about the process associated with the threat actor. This includes details such as process name, path, execution time, and unique identifiers that help track the actor's activities within the system.

Type: [ActorProcess](#) object

Required: No

### **session**

Contains information about the user session where the activity initiated.

Type: [Session](#) object

Required: No

### **user**

Contains information about the user credentials used by the threat actor.

Type: [User](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# ActorProcess

Contains information about a process involved in a GuardDuty finding, including process identification, execution details, and file information.

## Contents

### **name**

The name of the process as it appears in the system.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 4096.

Required: Yes

### **path**

The full file path to the process executable on the system.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 4096.

Required: Yes

### **sha256**

The SHA256 hash of the process executable file, which can be used for identification and verification purposes.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 1024.

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# AddonDetails

Information about the installed EKS add-on (GuardDuty security agent).

## Contents

### addonStatus

Status of the installed EKS add-on.

Type: String

Required: No

### addonVersion

Version of the installed EKS add-on.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# AdminAccount

The account within the organization specified as the GuardDuty delegated administrator.

## Contents

### adminAccountId

The AWS account ID for the account.

Type: String

Required: No

### adminStatus

Indicates whether the account is enabled as the delegated administrator.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

Valid Values: ENABLED | DISABLE\_IN\_PROGRESS

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# Administrator

Contains information about the administrator account and invitation.

## Contents

### accountId

The ID of the account used as the administrator account.

Type: String

Length Constraints: Fixed length of 12.

Required: No

### invitationId

The value that is used to validate the administrator account to the member account.

Type: String

Required: No

### invitedAt

The timestamp when the invitation was sent.

Type: String

Required: No

### relationshipStatus

The status of the relationship between the administrator and member accounts.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# AgentDetails

Information about the installed GuardDuty security agent.

## Contents

### version

Version of the installed GuardDuty security agent.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# Anomaly

Contains information about the anomalies.

## Contents

### profiles

Information about the types of profiles.

Type: String to string to array of [AnomalyObject](#) objects map map

Required: No

### unusual

Information about the behavior of the anomalies.

Type: [AnomalyUnusual](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# AnomalyObject

Contains information about the unusual anomalies.

## Contents

### **observations**

The recorded value.

Type: [Observations](#) object

Required: No

### **profileSubtype**

The frequency of the anomaly.

Type: String

Valid Values: FREQUENT | INFREQUENT | UNSEEN | RARE

Required: No

### **profileType**

The type of behavior of the profile.

Type: String

Valid Values: FREQUENCY

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# AnomalyUnusual

Contains information about the behavior of the anomaly that is new to GuardDuty.

## Contents

### behavior

The behavior of the anomalous activity that caused GuardDuty to generate the finding.

Type: String to string to [AnomalyObject](#) object map map

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# AutonomousSystem

Contains information about the Autonomous System (AS) associated with the network endpoints involved in an attack sequence.

## Contents

### **name**

Name associated with the Autonomous System (AS).

Type: String

Required: Yes

### **number**

The unique number that identifies the Autonomous System (AS).

Type: Integer

Required: Yes

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# AwsApiCallAction

Contains information about the API action.

## Contents

### **affectedResources**

The details of the AWS account that made the API call. This field identifies the resources that were affected by this API call.

Type: String to string map

Required: No

### **api**

The AWS API name.

Type: String

Required: No

### **callerType**

The AWS API caller type.

Type: String

Required: No

### **domainDetails**

The domain information for the AWS API call.

Type: [DomainDetails object](#)

Required: No

### **errorCode**

The error code of the failed AWS API action.

Type: String

Required: No

## remoteAccountDetails

The details of the AWS account that made the API call. This field appears if the call was made from outside your account.

Type: [RemoteAccountDetails](#) object

Required: No

## remoteIpDetails

The remote IP information of the connection that initiated the AWS API call.

Type: [RemotelpDetails](#) object

Required: No

## serviceName

The AWS service name whose API was invoked.

Type: String

Required: No

## userAgent

The agent through which the API request was made.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# BlockPublicAccess

Contains information on how the bucket owner's S3 Block Public Access settings are being applied to the S3 bucket. See [S3 Block Public Access](#) for more information.

## Contents

### **blockPublicAcls**

Indicates if S3 Block Public Access is set to BlockPublicAcls.

Type: Boolean

Required: No

### **blockPublicPolicy**

Indicates if S3 Block Public Access is set to BlockPublicPolicy.

Type: Boolean

Required: No

### **ignorePublicAcls**

Indicates if S3 Block Public Access is set to IgnorePublicAcls.

Type: Boolean

Required: No

### **restrictPublicBuckets**

Indicates if S3 Block Public Access is set to RestrictPublicBuckets.

Type: Boolean

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# BucketLevelPermissions

Contains information about the bucket level permissions for the S3 bucket.

## Contents

### accessControlList

Contains information on how Access Control Policies are applied to the bucket.

Type: [AccessControlList](#) object

Required: No

### blockPublicAccess

Contains information on which account level S3 Block Public Access settings are applied to the S3 bucket.

Type: [BlockPublicAccess](#) object

Required: No

### bucketPolicy

Contains information on the bucket policies for the S3 bucket.

Type: [BucketPolicy](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# BucketPolicy

Contains information on the current bucket policies for the S3 bucket.

## Contents

### **allowsPublicReadAccess**

A value that indicates whether public read access for the bucket is enabled through a bucket policy.

Type: Boolean

Required: No

### **allowsPublicWriteAccess**

A value that indicates whether public write access for the bucket is enabled through a bucket policy.

Type: Boolean

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# City

Contains information about the city associated with the IP address.

## Contents

### cityName

The city name of the remote IP address.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# CloudTrailConfigurationResult

Contains information on the status of CloudTrail as a data source for the detector.

## Contents

### status

Describes whether CloudTrail is enabled as a data source for the detector.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

Valid Values: ENABLED | DISABLED

Required: Yes

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# Condition

Contains information about the condition.

## Contents

### eq

*This member has been deprecated.*

Represents the *equal* condition to be applied to a single field when querying for findings.

Type: Array of strings

Required: No

### equals

Represents an *equal* condition to be applied to a single field when querying for findings.

Type: Array of strings

Required: No

### greaterThan

Represents a *greater than* condition to be applied to a single field when querying for findings.

Type: Long

Required: No

### greaterThanOrEqual

Represents a *greater than or equal* condition to be applied to a single field when querying for findings.

Type: Long

Required: No

### gt

*This member has been deprecated.*

Represents a *greater than* condition to be applied to a single field when querying for findings.

Type: Integer

Required: No

### **gte**

*This member has been deprecated.*

Represents a *greater than or equal* condition to be applied to a single field when querying for findings.

Type: Integer

Required: No

### **lessThan**

Represents a *less than* condition to be applied to a single field when querying for findings.

Type: Long

Required: No

### **lessThanOrEqualTo**

Represents a *less than or equal* condition to be applied to a single field when querying for findings.

Type: Long

Required: No

### **lt**

*This member has been deprecated.*

Represents a *less than* condition to be applied to a single field when querying for findings.

Type: Integer

Required: No

### **lte**

*This member has been deprecated.*

Represents a *less than or equal* condition to be applied to a single field when querying for findings.

Type: Integer

Required: No

### **neq**

*This member has been deprecated.*

Represents the *not equal* condition to be applied to a single field when querying for findings.

Type: Array of strings

Required: No

### **notEquals**

Represents a *not equal* condition to be applied to a single field when querying for findings.

Type: Array of strings

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# Container

Details of a container.

## Contents

### **containerRuntime**

The container runtime (such as, Docker or containerd) used to run the container.

Type: String

Required: No

### **id**

Container ID.

Type: String

Required: No

### **image**

Container image.

Type: String

Required: No

### **imagePrefix**

Part of the image name before the last slash. For example, imagePrefix for public.ecr.aws/amazonlinux/amazonlinux:latest would be public.ecr.aws/amazonlinux. If the image name is relative and does not have a slash, this field is empty.

Type: String

Required: No

### **name**

Container name.

Type: String

Required: No

## securityContext

Container security context.

Type: [SecurityContext](#) object

Required: No

## volumeMounts

Container volume mounts.

Type: Array of [VolumeMount](#) objects

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# ContainerFindingResource

Contains information about container resources involved in a GuardDuty finding. This structure provides details about containers that were identified as part of suspicious or malicious activity.

## Contents

### image

The container image information, including the image name and tag used to run the container that was involved in the finding.

Type: String

Required: Yes

### imageUid

The unique ID associated with the container image.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 1024.

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# ContainerInstanceDetails

Contains information about the Amazon EC2 instance that is running the Amazon ECS container.

## Contents

### compatibleContainerInstances

Represents total number of nodes in the Amazon ECS cluster.

Type: Long

Required: No

### coveredContainerInstances

Represents the nodes in the Amazon ECS cluster that has a **HEALTHY** coverage status.

Type: Long

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# Country

Contains information about the country where the remote IP address is located.

## Contents

### **countryCode**

The country code of the remote IP address.

Type: String

Required: No

### **countryName**

The country name of the remote IP address.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# CoverageEc2InstanceDetails

Contains information about the Amazon EC2 instance runtime coverage details.

## Contents

### agentDetails

Information about the installed security agent.

Type: [AgentDetails](#) object

Required: No

### clusterArn

The cluster ARN of the Amazon ECS cluster running on the Amazon EC2 instance.

Type: String

Required: No

### instanceId

The Amazon EC2 instance ID.

Type: String

Required: No

### instanceType

The instance type of the Amazon EC2 instance.

Type: String

Required: No

### managementType

Indicates how the GuardDuty security agent is managed for this resource.

- AUTO\_MANAGED indicates that GuardDuty deploys and manages updates for this resource.
- MANUAL indicates that you are responsible to deploy, update, and manage the GuardDuty security agent updates for this resource.

**Note**

The DISABLED status doesn't apply to Amazon EC2 instances and Amazon EKS clusters.

Type: String

Valid Values: AUTO\_MANAGED | MANUAL | DISABLED

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# CoverageEcsClusterDetails

Contains information about Amazon ECS cluster runtime coverage details.

## Contents

### clusterName

The name of the Amazon ECS cluster.

Type: String

Required: No

### containerInstanceDetails

Information about the Amazon ECS container running on Amazon EC2 instance.

Type: [ContainerInstanceDetails](#) object

Required: No

### fargateDetails

Information about the Fargate details associated with the Amazon ECS cluster.

Type: [FargateDetails](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# CoverageEksClusterDetails

Information about the EKS cluster that has a coverage status.

## Contents

### addonDetails

Information about the installed EKS add-on.

Type: [AddonDetails](#) object

Required: No

### clusterName

Name of the EKS cluster.

Type: String

Required: No

### compatibleNodes

Represents all the nodes within the EKS cluster in your account.

Type: Long

Required: No

### coveredNodes

Represents the nodes within the EKS cluster that have a HEALTHY coverage status.

Type: Long

Required: No

### managementType

Indicates how the Amazon EKS add-on GuardDuty agent is managed for this EKS cluster.

AUTO\_MANAGED indicates GuardDuty deploys and manages updates for this resource.

MANUAL indicates that you are responsible to deploy, update, and manage the Amazon EKS add-on GuardDuty agent for this resource.

Type: String

Valid Values: AUTO\_MANAGED | MANUAL | DISABLED

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# CoverageFilterCondition

Represents a condition that when matched will be added to the response of the operation.

## Contents

### equals

Represents an equal condition that is applied to a single field while retrieving the coverage details.

Type: Array of strings

Required: No

### notEquals

Represents a not equal condition that is applied to a single field while retrieving the coverage details.

Type: Array of strings

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# CoverageFilterCriteria

Represents the criteria used in the filter.

## Contents

### filterCriterion

Represents a condition that when matched will be added to the response of the operation.

Type: Array of [CoverageFilterCriterion](#) objects

Array Members: Minimum number of 0 items. Maximum number of 50 items.

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# CoverageFilterCriterion

Represents a condition that when matched will be added to the response of the operation.

## Contents

### criterionKey

An enum value representing possible filter fields.

 **Note**

Replace the enum value CLUSTER\_NAME with EKS\_CLUSTER\_NAME. CLUSTER\_NAME has been deprecated.

Type: String

Valid Values: ACCOUNT\_ID | CLUSTER\_NAME | RESOURCE\_TYPE | COVERAGE\_STATUS | ADDON\_VERSION | MANAGEMENT\_TYPE | EKS\_CLUSTER\_NAME | ECS\_CLUSTER\_NAME | AGENT\_VERSION | INSTANCE\_ID | CLUSTER\_ARN

Required: No

### filterCondition

Contains information about the condition.

Type: [CoverageFilterCondition](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# CoverageResource

Information about the resource of the GuardDuty account.

## Contents

### accountId

The unique ID of the AWS account.

Type: String

Length Constraints: Fixed length of 12.

Required: No

### coverageStatus

Represents the status of the EKS cluster coverage.

Type: String

Valid Values: HEALTHY | UNHEALTHY

Required: No

### detectorId

The unique ID of the GuardDuty detector associated with the resource.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: No

### issue

Represents the reason why a coverage status was UNHEALTHY for the EKS cluster.

Type: String

Required: No

### resourceDetails

Information about the resource for which the coverage statistics are retrieved.

Type: [CoverageResourceDetails](#) object

Required: No

### **resourceId**

The unique ID of the resource.

Type: String

Required: No

### **updatedAt**

The timestamp at which the coverage details for the resource were last updated. This is in UTC format.

Type: Timestamp

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# CoverageResourceDetails

Information about the resource for each individual EKS cluster.

## Contents

### ec2InstanceDetails

Information about the Amazon EC2 instance assessed for runtime coverage.

Type: [CoverageEc2InstanceDetails](#) object

Required: No

### ecsClusterDetails

Information about the Amazon ECS cluster that is assessed for runtime coverage.

Type: [CoverageEcsClusterDetails](#) object

Required: No

### eksClusterDetails

EKS cluster details involved in the coverage statistics.

Type: [CoverageEksClusterDetails](#) object

Required: No

### resourceType

The type of AWS resource.

Type: String

Valid Values: EKS | ECS | EC2

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# CoverageSortCriteria

Information about the sorting criteria used in the coverage statistics.

## Contents

### attributeName

Represents the field name used to sort the coverage details.

 **Note**

Replace the enum value CLUSTER\_NAME with EKS\_CLUSTER\_NAME. CLUSTER\_NAME has been deprecated.

Type: String

Valid Values: ACCOUNT\_ID | CLUSTER\_NAME | COVERAGE\_STATUS | ISSUE | ADDON\_VERSION | UPDATED\_AT | EKS\_CLUSTER\_NAME | ECS\_CLUSTER\_NAME | INSTANCE\_ID

Required: No

### orderBy

The order in which the sorted findings are to be displayed.

Type: String

Valid Values: ASC | DESC

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)

- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# CoverageStatistics

Information about the coverage statistics for a resource.

## Contents

### **countByCoverageStatus**

Represents coverage statistics for EKS clusters aggregated by coverage status.

Type: String to long map

Valid Keys: HEALTHY | UNHEALTHY

Required: No

### **countByResourceType**

Represents coverage statistics for EKS clusters aggregated by resource type.

Type: String to long map

Valid Keys: EKS | ECS | EC2

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# CreateProtectedResource

Information about the protected resource that is associated with the created Malware Protection plan. Presently, S3Bucket is the only supported protected resource.

## Contents

### s3Bucket

Information about the protected S3 bucket resource.

Type: [CreateS3BucketResource](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# CreateS3BucketResource

Information about the protected S3 bucket resource.

## Contents

### bucketName

Name of the S3 bucket.

Type: String

Required: No

### objectPrefixes

Information about the specified object prefixes. The S3 object will be scanned only if it belongs to any of the specified object prefixes.

Type: Array of strings

Array Members: Minimum number of 0 items. Maximum number of 5 items.

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# DataSourceConfigurations

Contains information about which data sources are enabled.

## Contents

### kubernetes

Describes whether any Kubernetes logs are enabled as data sources.

Type: [KubernetesConfiguration](#) object

Required: No

### malwareProtection

Describes whether Malware Protection is enabled as a data source.

Type: [MalwareProtectionConfiguration](#) object

Required: No

### s3Logs

Describes whether S3 data event logs are enabled as a data source.

Type: [S3LogsConfiguration](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# DataSourceConfigurationsResult

Contains information on the status of data sources for the detector.

## Contents

### cloudTrail

An object that contains information on the status of CloudTrail as a data source.

Type: [CloudTrailConfigurationResult](#) object

Required: Yes

### dnsLogs

An object that contains information on the status of DNS logs as a data source.

Type: [DNSLogsConfigurationResult](#) object

Required: Yes

### flowLogs

An object that contains information on the status of VPC flow logs as a data source.

Type: [FlowLogsConfigurationResult](#) object

Required: Yes

### s3Logs

An object that contains information on the status of S3 Data event logs as a data source.

Type: [S3LogsConfigurationResult](#) object

Required: Yes

### kubernetes

An object that contains information on the status of all Kubernetes data sources.

Type: [KubernetesConfigurationResult](#) object

Required: No

## malwareProtection

Describes the configuration of Malware Protection data sources.

Type: [MalwareProtectionConfigurationResult](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# DataSourceFreeTrial

Contains information about which data sources are enabled for the GuardDuty member account.

## Contents

### freeTrialDaysRemaining

A value that specifies the number of days left to use each enabled data source.

Type: Integer

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# DataSourcesFreeTrial

Contains information about which data sources are enabled for the GuardDuty member account.

## Contents

### cloudTrail

Describes whether any AWS CloudTrail management event logs are enabled as data sources.

Type: [DataSourceFreeTrial](#) object

Required: No

### dnsLogs

Describes whether any DNS logs are enabled as data sources.

Type: [DataSourceFreeTrial](#) object

Required: No

### flowLogs

Describes whether any VPC Flow logs are enabled as data sources.

Type: [DataSourceFreeTrial](#) object

Required: No

### kubernetes

Describes whether any Kubernetes logs are enabled as data sources.

Type: [KubernetesDataSourceFreeTrial](#) object

Required: No

### malwareProtection

Describes whether Malware Protection is enabled as a data source.

Type: [MalwareProtectionDataSourceFreeTrial](#) object

Required: No

## s3Logs

Describes whether any S3 data event logs are enabled as data sources.

Type: [DataSourceFreeTrial](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# DateStatistics

Represents list a map of dates with a count of total findings generated on each date.

## Contents

### **date**

The timestamp when the total findings count is observed.

For example, Date would look like "2024-09-05T17:00:00-07:00" whereas

LastGeneratedAt would look like 2024-09-05T17:12:29-07:00".

Type: Timestamp

Required: No

### **lastGeneratedAt**

The timestamp at which the last finding in the findings count, was generated.

Type: Timestamp

Required: No

### **severity**

The severity of the findings generated on each date.

Type: Double

Required: No

### **totalFindings**

The total number of findings that were generated per severity level on each date.

Type: Integer

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# DefaultServerSideEncryption

Contains information on the server side encryption method used in the S3 bucket. See [S3 Server-Side Encryption](#) for more information.

## Contents

### encryptionType

The type of encryption used for objects within the S3 bucket.

Type: String

Required: No

### kmsMasterKeyArn

The Amazon Resource Name (ARN) of the KMS encryption key. Only available if the bucket EncryptionType is aws:kms.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# Destination

Contains information about the publishing destination, including the ID, type, and status.

## Contents

### **destinationId**

The unique ID of the publishing destination.

Type: String

Required: Yes

### **destinationType**

The type of resource used for the publishing destination. Currently, only Amazon S3 buckets are supported.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

Valid Values: S3

Required: Yes

### **status**

The status of the publishing destination.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

Valid Values: PENDING\_VERIFICATION | PUBLISHING |  
UNABLE\_TO\_PUBLISH\_FIX\_DESTINATION\_PROPERTY | STOPPED

Required: Yes

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# DestinationProperties

Contains the Amazon Resource Name (ARN) of the resource to publish to, such as an S3 bucket, and the ARN of the KMS key to use to encrypt published findings.

## Contents

### destinationArn

The ARN of the resource to publish to.

To specify an S3 bucket folder use the following format: `arn:aws:s3:::DOC-EXAMPLE-BUCKET/myFolder/`

Type: String

Required: No

### kmsKeyArn

The ARN of the KMS key to use for encryption.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# Detection

Contains information about the detected behavior.

## Contents

### anomaly

The details about the anomalous activity that caused GuardDuty to generate the finding.

Type: [Anomaly](#) object

Required: No

### sequence

The details about the attack sequence.

Type: [Sequence](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# DetectorAdditionalConfiguration

Information about the additional configuration for a feature in your GuardDuty account.

## Contents

### **name**

Name of the additional configuration.

Type: String

Valid Values: EKS\_ADDON\_MANAGEMENT | ECS\_FARGATE\_AGENT\_MANAGEMENT | EC2\_AGENT\_MANAGEMENT

Required: No

### **status**

Status of the additional configuration.

Type: String

Valid Values: ENABLED | DISABLED

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# DetectorAdditionalConfigurationResult

Information about the additional configuration.

## Contents

### **name**

Name of the additional configuration.

Type: String

Valid Values: EKS\_ADDON\_MANAGEMENT | ECS\_FARGATE\_AGENT\_MANAGEMENT | EC2\_AGENT\_MANAGEMENT

Required: No

### **status**

Status of the additional configuration.

Type: String

Valid Values: ENABLED | DISABLED

Required: No

### **updatedAt**

The timestamp at which the additional configuration was last updated. This is in UTC format.

Type: Timestamp

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)

- [AWS SDK for Ruby V3](#)

# DetectorFeatureConfiguration

Contains information about a GuardDuty feature.

Specifying both EKS Runtime Monitoring (EKS\_RUNTIME\_MONITORING) and Runtime Monitoring (RUNTIME\_MONITORING) will cause an error. You can add only one of these two features because Runtime Monitoring already includes the threat detection for Amazon EKS resources. For more information, see [Runtime Monitoring](#).

## Contents

### additionalConfiguration

Additional configuration for a resource.

Type: Array of [DetectorAdditionalConfiguration](#) objects

Required: No

### name

The name of the feature.

Type: String

Valid Values: S3\_DATA\_EVENTS | EKS\_AUDIT\_LOGS | EBS\_MALWARE\_PROTECTION | RDS\_LOGIN\_EVENTS | EKS\_RUNTIME\_MONITORING | LAMBDA\_NETWORK\_LOGS | RUNTIME\_MONITORING

Required: No

### status

The status of the feature.

Type: String

Valid Values: ENABLED | DISABLED

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# DetectorFeatureConfigurationResult

Contains information about a GuardDuty feature.

Specifying both EKS Runtime Monitoring (EKS\_RUNTIME\_MONITORING) and Runtime Monitoring (RUNTIME\_MONITORING) will cause an error. You can add only one of these two features because Runtime Monitoring already includes the threat detection for Amazon EKS resources. For more information, see [Runtime Monitoring](#).

## Contents

### additionalConfiguration

Additional configuration for a resource.

Type: Array of [DetectorAdditionalConfigurationResult](#) objects

Required: No

### name

Indicates the name of the feature that can be enabled for the detector.

Type: String

Valid Values: FLOW\_LOGS | CLOUD\_TRAIL | DNS\_LOGS | S3\_DATA\_EVENTS  
| EKS\_AUDIT\_LOGS | EBS\_MALWARE\_PROTECTION | RDS\_LOGIN\_EVENTS |  
EKS\_RUNTIME\_MONITORING | LAMBDA\_NETWORK\_LOGS | RUNTIME\_MONITORING

Required: No

### status

Indicates the status of the feature that is enabled for the detector.

Type: String

Valid Values: ENABLED | DISABLED

Required: No

### updatedAt

The timestamp at which the feature object was updated.

Type: Timestamp

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# DNSLogsConfigurationResult

Contains information on the status of DNS logs as a data source.

## Contents

### status

Denotes whether DNS logs is enabled as a data source.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

Valid Values: ENABLED | DISABLED

Required: Yes

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# DnsRequestAction

Contains information about the DNS\_REQUEST action described in this finding.

## Contents

### blocked

Indicates whether the targeted port is blocked.

Type: Boolean

Required: No

### domain

The domain information for the DNS query.

Type: String

Required: No

### domainWithSuffix

The second and top level domain involved in the activity that potentially prompted GuardDuty to generate this finding. For a list of top-level and second-level domains, see [public suffix list](#).

Type: String

Required: No

### protocol

The network connection protocol observed in the activity that prompted GuardDuty to generate the finding.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# DomainDetails

Contains information about the domain.

## Contents

### domain

The domain information for the AWS API call.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# EbsVolumeDetails

Contains list of scanned and skipped EBS volumes with details.

## Contents

### scannedVolumeDetails

List of EBS volumes that were scanned.

Type: Array of [VolumeDetail](#) objects

Required: No

### skippedVolumeDetails

List of EBS volumes that were skipped from the malware scan.

Type: Array of [VolumeDetail](#) objects

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# EbsVolumeScanDetails

Contains details from the malware scan that created a finding.

## Contents

### scanCompletedAt

Returns the completion date and time of the malware scan.

Type: Timestamp

Required: No

### scanDetections

Contains a complete view providing malware scan result details.

Type: [ScanDetections](#) object

Required: No

### scanId

Unique Id of the malware scan that generated the finding.

Type: String

Required: No

### scanStartedAt

Returns the start date and time of the malware scan.

Type: Timestamp

Required: No

### scanType

Specifies the scan type that invoked the malware scan.

Type: String

Valid Values: GUARDDUTY\_INITIATED | ON\_DEMAND

Required: No

### **sources**

Contains list of threat intelligence sources used to detect threats.

Type: Array of strings

Required: No

### **triggerFindingId**

GuardDuty finding ID that triggered a malware scan.

Type: String

Required: No

## **See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# EbsVolumesResult

Describes the configuration of scanning EBS volumes as a data source.

## Contents

### reason

Specifies the reason why scanning EBS volumes (Malware Protection) was not enabled as a data source.

Type: String

Required: No

### status

Describes whether scanning EBS volumes is enabled as a data source.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

Valid Values: ENABLED | DISABLED

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# Ec2Instance

Details about the potentially impacted Amazon EC2 instance resource.

## Contents

### availabilityZone

The availability zone of the Amazon EC2 instance. For more information, see [Availability zones](#) in the *Amazon EC2 User Guide*.

Type: String

Required: No

### ec2NetworkInterfaceUids

The ID of the network interface.

Type: Array of strings

Required: No

### iamInstanceProfile

Contains information about the EC2 instance profile.

Type: [iamInstanceProfile](#) object

Required: No

### imageDescription

The image description of the Amazon EC2 instance.

Type: String

Required: No

### instanceState

The state of the Amazon EC2 instance. For more information, see [Amazon EC2 instance state changes](#) in the *Amazon EC2 User Guide*.

Type: String

Required: No

### **instanceType**

Type of the Amazon EC2 instance.

Type: String

Required: No

### **outpostArn**

The Amazon Resource Name (ARN) of the AWS Outpost. This shows applicable AWS Outposts instances.

Type: String

Required: No

### **platform**

The platform of the Amazon EC2 instance.

Type: String

Required: No

### **productCodes**

The product code of the Amazon EC2 instance.

Type: Array of [ProductCode](#) objects

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# Ec2NetworkInterface

Contains information about the elastic network interface of the Amazon EC2 instance.

## Contents

### ipv6Addresses

A list of IPv6 addresses for the Amazon EC2 instance.

Type: Array of strings

Required: No

### privateIpAddresses

Other private IP address information of the Amazon EC2 instance.

Type: Array of [PrivateIpAddressDetails](#) objects

Required: No

### publicIp

The public IP address of the Amazon EC2 instance.

Type: String

Required: No

### securityGroups

The security groups associated with the Amazon EC2 instance.

Type: Array of [SecurityGroup](#) objects

Required: No

### subNetId

The subnet ID of the Amazon EC2 instance.

Type: String

Required: No

## vpcId

The VPC ID of the Amazon EC2 instance.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# EcsClusterDetails

Contains information about the details of the ECS Cluster.

## Contents

### activeServicesCount

The number of services that are running on the cluster in an ACTIVE state.

Type: Integer

Required: No

### arn

The Amazon Resource Name (ARN) that identifies the cluster.

Type: String

Required: No

### name

The name of the ECS Cluster.

Type: String

Required: No

### registeredContainerInstancesCount

The number of container instances registered into the cluster.

Type: Integer

Required: No

### runningTasksCount

The number of tasks in the cluster that are in the RUNNING state.

Type: Integer

Required: No

**status**

The status of the ECS cluster.

Type: String

Required: No

**tags**

The tags of the ECS Cluster.

Type: Array of [Tag](#) objects

Required: No

**taskDetails**

Contains information about the details of the ECS Task.

Type: [EcsTaskDetails](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# EcsTaskDetails

Contains information about the task in an ECS cluster.

## Contents

### arn

The Amazon Resource Name (ARN) of the task.

Type: String

Required: No

### containers

The containers that's associated with the task.

Type: Array of [Container](#) objects

Required: No

### definitionArn

The ARN of the task definition that creates the task.

Type: String

Required: No

### group

The name of the task group that's associated with the task.

Type: String

Required: No

### launchType

A capacity on which the task is running. For example, Fargate and EC2.

Type: String

Required: No

**startedAt**

The Unix timestamp for the time when the task started.

Type: Timestamp

Required: No

**startedBy**

Contains the tag specified when a task is started.

Type: String

Required: No

**tags**

The tags of the ECS Task.

Type: Array of [Tag](#) objects

Required: No

**createdAt**

The Unix timestamp for the time when the task was created.

Type: Timestamp

Required: No

**version**

The version counter for the task.

Type: String

Required: No

**volumes**

The list of data volume definitions for the task.

Type: Array of [Volume](#) objects

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# EksCluster

Contains information about the Amazon EKS cluster involved in a GuardDuty finding, including cluster identification, status, and network configuration.

## Contents

### arn

The Amazon Resource Name (ARN) that uniquely identifies the Amazon EKS cluster involved in the finding.

Type: String

Required: No

### createdAt

The timestamp indicating when the Amazon EKS cluster was created, in UTC format.

Type: Timestamp

Required: No

### ec2InstanceUids

A list of unique identifiers for the Amazon EC2 instances that serve as worker nodes in the Amazon EKS cluster.

Type: Array of strings

Array Members: Minimum number of 0 items. Maximum number of 25 items.

Length Constraints: Minimum length of 0. Maximum length of 256.

Required: No

### status

The current status of the Amazon EKS cluster.

Type: String

Valid Values: CREATING | ACTIVE | DELETING | FAILED | UPDATING | PENDING

Required: No

### vpcId

The ID of the Amazon Virtual Private Cloud (Amazon VPC) associated with the Amazon EKS cluster.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# EksClusterDetails

Details about the EKS cluster involved in a Kubernetes finding.

## Contents

### arn

EKS cluster ARN.

Type: String

Required: No

### createdAt

The timestamp when the EKS cluster was created.

Type: Timestamp

Required: No

### name

EKS cluster name.

Type: String

Required: No

### status

The EKS cluster status.

Type: String

Required: No

### tags

The EKS cluster tags.

Type: Array of [Tag](#) objects

Required: No

## vpcId

The VPC ID to which the EKS cluster is attached.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# Evidence

Contains information about the reason that the finding was generated.

## Contents

### **threatIntelligenceDetails**

A list of threat intelligence details related to the evidence.

Type: Array of [ThreatIntelligenceDetail](#) objects

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# FargateDetails

Contains information about AWS Fargate details associated with an Amazon ECS cluster.

## Contents

### issues

Runtime coverage issues identified for the resource running on AWS Fargate.

Type: Array of strings

Array Members: Minimum number of 0 items. Maximum number of 50 items.

Required: No

### managementType

Indicates how the GuardDuty security agent is managed for this resource.

- AUTO\_MANAGED indicates that GuardDuty deploys and manages updates for this resource.
- DISABLED indicates that the deployment of the GuardDuty security agent is disabled for this resource.

 **Note**

The MANUAL status doesn't apply to the AWS Fargate (Amazon ECS only) workloads.

Type: String

Valid Values: AUTO\_MANAGED | MANUAL | DISABLED

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)

- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# FilterCondition

Contains information about the condition.

## Contents

### equalsValue

Represents an *equal* condition to be applied to a single field when querying for scan entries.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 200.

Required: No

### greaterThan

Represents a *greater than* condition to be applied to a single field when querying for scan entries.

Type: Long

Required: No

### lessThan

Represents a *less than* condition to be applied to a single field when querying for scan entries.

Type: Long

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# FilterCriteria

Represents the criteria to be used in the filter for describing scan entries.

## Contents

### filterCriterion

Represents a condition that when matched will be added to the response of the operation.

Type: Array of [FilterCriterion](#) objects

Array Members: Minimum number of 0 items. Maximum number of 1 item.

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# FilterCriterion

Represents a condition that when matched will be added to the response of the operation. Irrespective of using any filter criteria, an administrator account can view the scan entries for all of its member accounts. However, each member account can view the scan entries only for their own account.

## Contents

### criterionKey

An enum value representing possible scan properties to match with given scan entries.

Type: String

Valid Values: EC2\_INSTANCE\_ARN | SCAN\_ID | ACCOUNT\_ID | GUARDDUTY\_FINDING\_ID  
| SCAN\_START\_TIME | SCAN\_STATUS | SCAN\_TYPE

Required: No

### filterCondition

Contains information about the condition.

Type: [FilterCondition](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# Finding

Contains information about the finding that is generated when abnormal or suspicious activity is detected.

## Contents

### accountId

The ID of the account in which the finding was generated.

Type: String

Required: Yes

### arn

The ARN of the finding.

Type: String

Required: Yes

### createdAt

The time and date when the finding was created.

Type: String

Required: Yes

### id

The ID of the finding.

Type: String

Required: Yes

### region

The Region where the finding was generated. For findings generated from [Global Service Events](#), the Region value in the finding might differ from the Region where GuardDuty identifies the potential threat. For more information, see [How GuardDuty handles AWS CloudTrail global events](#) in the [Amazon GuardDuty User Guide](#).

Type: String

Required: Yes

### **resource**

Contains information about the AWS resource associated with the activity that prompted GuardDuty to generate a finding.

Type: [Resource](#) object

Required: Yes

### **schemaVersion**

The version of the schema used for the finding.

Type: String

Required: Yes

### **severity**

The severity of the finding.

Type: Double

Required: Yes

### **type**

The type of finding.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 50.

Required: Yes

### **updatedAt**

The time and date when the finding was last updated.

Type: String

Required: Yes

**associatedAttackSequenceArn**

Amazon Resource Name (ARN) associated with the attack sequence finding.

Type: String

Required: No

**confidence**

The confidence score for the finding.

Type: Double

Required: No

**description**

The description of the finding.

Type: String

Required: No

**partition**

The partition associated with the finding.

Type: String

Required: No

**service**

Contains additional information about the generated finding.

Type: [Service object](#)

Required: No

**title**

The title of the finding.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# FindingCriteria

Contains information about the criteria used for querying findings.

## Contents

### criterion

Represents a map of finding properties that match specified conditions and values when querying findings.

Type: String to [Condition](#) object map

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# FindingStatistics

Contains information about finding statistics.

## Contents

### countBySeverity

*This member has been deprecated.*

Represents a list of map of severity to count statistics for a set of findings.

Type: String to integer map

Required: No

### groupedByAccount

Represents a list of map of accounts with a findings count associated with each account.

Type: Array of [AccountStatistics](#) objects

Required: No

### groupedByDate

Represents a list of map of dates with a count of total findings generated on each date per severity level.

Type: Array of [DateStatistics](#) objects

Required: No

### groupedByFindingType

Represents a list of map of finding types with a count of total findings generated for each type.

Based on the `orderBy` parameter, this request returns either the most occurring finding types or the least occurring finding types. If the `orderBy` parameter is `ASC`, this will represent the least occurring finding types in your account; otherwise, this will represent the most occurring finding types. The default value of `orderBy` is `DESC`.

Type: Array of [FindingTypeStatistics](#) objects

Required: No

### groupedByResource

Represents a list of map of top resources with a count of total findings.

Type: Array of [ResourceStatistics](#) objects

Required: No

### groupedBySeverity

Represents a list of map of total findings for each severity level.

Type: Array of [SeverityStatistics](#) objects

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# FindingTypeStatistics

Information about each finding type associated with the groupedByFindingType statistics.

## Contents

### **findingType**

Name of the finding type.

Type: String

Required: No

### **lastGeneratedAt**

The timestamp at which this finding type was last generated in your environment.

Type: Timestamp

Required: No

### **totalFindings**

The total number of findings associated with generated for each distinct finding type.

Type: Integer

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# FlowLogsConfigurationResult

Contains information on the status of VPC flow logs as a data source.

## Contents

### status

Denotes whether VPC flow logs is enabled as a data source.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

Valid Values: ENABLED | DISABLED

Required: Yes

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# FreeTrialFeatureConfigurationResult

Contains information about the free trial period for a feature.

## Contents

### freeTrialDaysRemaining

The number of the remaining free trial days for the feature.

Type: Integer

Required: No

### name

The name of the feature for which the free trial is configured.

Type: String

Valid Values: FLOW\_LOGS | CLOUD\_TRAIL | DNS\_LOGS | S3\_DATA\_EVENTS  
| EKS\_AUDIT\_LOGS | EBS\_MALWARE\_PROTECTION | RDS\_LOGIN\_EVENTS  
| EKS\_RUNTIME\_MONITORING | LAMBDA\_NETWORK\_LOGS |  
FARGATE\_RUNTIME\_MONITORING | EC2\_RUNTIME\_MONITORING

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# GeoLocation

Contains information about the location of the remote IP address. By default, GuardDuty returns Geolocation with Lat and Lon as  $0.0$ .

## Contents

### lat

The latitude information of the remote IP address.

Type: Double

Required: No

### lon

The longitude information of the remote IP address.

Type: Double

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# HighestSeverityThreatDetails

Contains details of the highest severity threat detected during scan and number of infected files.

## Contents

### count

Total number of infected files with the highest severity threat detected.

Type: Integer

Required: No

### severity

Severity level of the highest severity threat detected.

Type: String

Required: No

### threatName

Threat name of the highest severity threat detected as part of the malware scan.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# HostPath

Represents a pre-existing file or directory on the host machine that the volume maps to.

## Contents

### path

Path of the file or directory on the host that the volume maps to.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# IamInstanceProfile

Contains information about the EC2 instance profile.

## Contents

### arn

The profile ARN of the EC2 instance.

Type: String

Required: No

### id

The profile ID of the EC2 instance.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# ImpersonatedUser

Contains information about the impersonated user.

## Contents

### groups

The group to which the user name belongs.

Type: Array of strings

Required: No

### username

Information about the username that was being impersonated.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# Indicator

Contains information about the indicators that include a set of signals observed in an attack sequence.

## Contents

### key

Specific indicator keys observed in the attack sequence. For description of the valid values for key, see [Attack sequence finding details](#) in the *Amazon GuardDuty User Guide*.

Type: String

Valid Values: SUSPICIOUS\_USER\_AGENT | SUSPICIOUS\_NETWORK | MALICIOUS\_IP  
| TOR\_IP | ATTACK\_TACTIC | HIGH\_RISK\_API | ATTACK\_TECHNIQUE |  
UNUSUAL\_API\_FOR\_ACCOUNT | UNUSUAL ASN FOR ACCOUNT | UNUSUAL ASN FOR USER  
| SUSPICIOUS\_PROCESS | MALICIOUS\_DOMAIN | MALICIOUS\_PROCESS |  
CRYPTOMINING\_IP | CRYPTOMINING\_DOMAIN | CRYPTOMINING\_PROCESS

Required: Yes

### title

Title describing the indicator.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: No

### values

Values associated with each indicator key. For example, if the indicator key is SUSPICIOUS\_NETWORK, then the value will be the name of the network. If the indicator key is ATTACK\_TACTIC, then the value will be one of the MITRE tactics.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 400 items.

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# InstanceDetails

Contains information about the details of an instance.

## Contents

### availabilityZone

The Availability Zone of the EC2 instance.

Type: String

Required: No

### iamInstanceProfile

The profile information of the EC2 instance.

Type: [iamInstanceProfile](#) object

Required: No

### imageDescription

The image description of the EC2 instance.

Type: String

Required: No

### imageId

The image ID of the EC2 instance.

Type: String

Required: No

### instanceId

The ID of the EC2 instance.

Type: String

Required: No

**instanceState**

The state of the EC2 instance.

Type: String

Required: No

**instanceType**

The type of the EC2 instance.

Type: String

Required: No

**launchTime**

The launch time of the EC2 instance.

Type: String

Required: No

**networkInterfaces**

The elastic network interface information of the EC2 instance.

Type: Array of [NetworkInterface](#) objects

Required: No

**outpostArn**

The Amazon Resource Name (ARN) of the AWS Outpost. Only applicable to AWS Outposts instances.

Type: String

Required: No

**platform**

The platform of the EC2 instance.

Type: String

Required: No

### productCodes

The product code of the EC2 instance.

Type: Array of [ProductCode](#) objects

Required: No

### tags

The tags of the EC2 instance.

Type: Array of [Tag](#) objects

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# Invitation

Contains information about the invitation to become a member account.

## Contents

### accountId

The ID of the account that the invitation was sent from.

Type: String

Length Constraints: Fixed length of 12.

Required: No

### invitationId

The ID of the invitation. This value is used to validate the inviter account to the member account.

Type: String

Required: No

### invitedAt

The timestamp when the invitation was sent.

Type: String

Required: No

### relationshipStatus

The status of the relationship between the inviter and invitee accounts.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# ItemPath

Information about the nested item path and hash of the protected resource.

## Contents

### hash

The hash value of the infected resource.

Type: String

Required: No

### nestedItemPath

The nested item path where the infected file was found.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# KubernetesApiCallAction

Information about the Kubernetes API call action described in this finding.

## Contents

### namespace

The name of the namespace where the Kubernetes API call action takes place.

Type: String

Required: No

### parameters

Parameters related to the Kubernetes API call action.

Type: String

Required: No

### remoteIpDetails

Contains information about the remote IP address of the connection.

Type: [RemotelpDetails](#) object

Required: No

### requestUri

The Kubernetes API request URI.

Type: String

Required: No

### resource

The resource component in the Kubernetes API call action.

Type: String

Required: No

**resourceName**

The name of the resource in the Kubernetes API call action.

Type: String

Required: No

**sourceIPs**

The IP of the Kubernetes API caller and the IPs of any proxies or load balancers between the caller and the API endpoint.

Type: Array of strings

Required: No

**statusCode**

The resulting HTTP response code of the Kubernetes API call action.

Type: Integer

Required: No

**subresource**

The name of the sub-resource in the Kubernetes API call action.

Type: String

Required: No

**userAgent**

The user agent of the caller of the Kubernetes API.

Type: String

Required: No

**verb**

The Kubernetes API request HTTP verb.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# KubernetesAuditLogsConfiguration

Describes whether Kubernetes audit logs are enabled as a data source.

## Contents

### enable

The status of Kubernetes audit logs as a data source.

Type: Boolean

Required: Yes

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# KubernetesAuditLogsConfigurationResult

Describes whether Kubernetes audit logs are enabled as a data source.

## Contents

### **status**

A value that describes whether Kubernetes audit logs are enabled as a data source.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

Valid Values: ENABLED | DISABLED

Required: Yes

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# KubernetesConfiguration

Describes whether any Kubernetes data sources are enabled.

## Contents

### auditLogs

The status of Kubernetes audit logs as a data source.

Type: [KubernetesAuditLogsConfiguration](#) object

Required: Yes

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# KubernetesConfigurationResult

Describes whether any Kubernetes logs will be enabled as a data source.

## Contents

### auditLogs

Describes whether Kubernetes audit logs are enabled as a data source.

Type: [KubernetesAuditLogsConfigurationResult](#) object

Required: Yes

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# KubernetesDataSourceFreeTrial

Provides details about the Kubernetes resources when it is enabled as a data source.

## Contents

### auditLogs

Describes whether Kubernetes audit logs are enabled as a data source.

Type: [DataSourceFreeTrial](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# KubernetesDetails

Details about Kubernetes resources such as a Kubernetes user or workload resource involved in a Kubernetes finding.

## Contents

### kubernetesUserDetails

Details about the Kubernetes user involved in a Kubernetes finding.

Type: [KubernetesUserDetails](#) object

Required: No

### kubernetesWorkloadDetails

Details about the Kubernetes workload involved in a Kubernetes finding.

Type: [KubernetesWorkloadDetails](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# KubernetesPermissionCheckedDetails

Information about the Kubernetes API for which you check if you have permission to call.

## Contents

### allowed

Information whether the user has the permission to call the Kubernetes API.

Type: Boolean

Required: No

### namespace

The namespace where the Kubernetes API action will take place.

Type: String

Required: No

### resource

The Kubernetes resource with which your Kubernetes API call will interact.

Type: String

Required: No

### verb

The verb component of the Kubernetes API call. For example, when you check whether or not you have the permission to call the CreatePod API, the verb component will be Create.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# KubernetesRoleBindingDetails

Contains information about the role binding that grants the permission defined in a Kubernetes role.

## Contents

### kind

The kind of the role. For role binding, this value will be RoleBinding.

Type: String

Required: No

### name

The name of the RoleBinding.

Type: String

Required: No

### roleRefKind

The type of the role being referenced. This could be either Role or ClusterRole.

Type: String

Required: No

### roleRefName

The name of the role being referenced. This must match the name of the Role or ClusterRole that you want to bind to.

Type: String

Required: No

### uid

The unique identifier of the role binding.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# KubernetesRoleDetails

Information about the Kubernetes role name and role type.

## Contents

### kind

The kind of role. For this API, the value of kind will be Role.

Type: String

Required: No

### name

The name of the Kubernetes role.

Type: String

Required: No

### uid

The unique identifier of the Kubernetes role name.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

# KubernetesUserDetails

Details about the Kubernetes user involved in a Kubernetes finding.

## Contents

### groups

The groups that include the user who called the Kubernetes API.

Type: Array of strings

Required: No

### impersonatedUser

Information about the impersonated user.

Type: [ImpersonatedUser](#) object

Required: No

### sessionName

Entity that assumes the IAM role when Kubernetes RBAC permissions are assigned to that role.

Type: Array of strings

Required: No

### uid

The user ID of the user who called the Kubernetes API.

Type: String

Required: No

### username

The username of the user who called the Kubernetes API.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# KubernetesWorkload

Contains information about Kubernetes workloads involved in a GuardDuty finding, including pods, deployments, and other Kubernetes resources.

## Contents

### **containerUids**

A list of unique identifiers for the containers that are part of the Kubernetes workload.

Type: Array of strings

Length Constraints: Minimum length of 0. Maximum length of 256.

Required: No

### **type**

The types of Kubernetes resources involved in the workload.

Type: String

Valid Values: PODS | JOBS | CRONJOBS | DEPLOYMENTS | DAEMONSETS | STATEFULSETS | REPLICASETS | REPLICATIONCONTROLLERS

Required: No

### **namespace**

The Kubernetes namespace in which the workload is running, providing logical isolation within the cluster.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)

- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# KubernetesWorkloadDetails

Details about the Kubernetes workload involved in a Kubernetes finding.

## Contents

### **containers**

Containers running as part of the Kubernetes workload.

Type: Array of [Container](#) objects

Required: No

### **hostIPC**

Whether the host IPC flag is enabled for the pods in the workload.

Type: Boolean

Required: No

### **hostNetwork**

Whether the hostNetwork flag is enabled for the pods included in the workload.

Type: Boolean

Required: No

### **hostPID**

Whether the host PID flag is enabled for the pods in the workload.

Type: Boolean

Required: No

### **name**

Kubernetes workload name.

Type: String

Required: No

**namespace**

Kubernetes namespace that the workload is part of.

Type: String

Required: No

**serviceAccountName**

The service account name that is associated with a Kubernetes workload.

Type: String

Required: No

**type**

Kubernetes workload type (e.g. Pod, Deployment, etc.).

Type: String

Required: No

**uid**

Kubernetes workload ID.

Type: String

Required: No

**volumes**

Volumes used by the Kubernetes workload.

Type: Array of [Volume](#) objects

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# LambdaDetails

Information about the Lambda function involved in the finding.

## Contents

### **description**

Description of the Lambda function.

Type: String

Required: No

### **functionArn**

Amazon Resource Name (ARN) of the Lambda function.

Type: String

Required: No

### **functionName**

Name of the Lambda function.

Type: String

Required: No

### **functionVersion**

The version of the Lambda function.

Type: String

Required: No

### **lastModifiedAt**

The timestamp when the Lambda function was last modified. This field is in the UTC date string format (2023-03-22T19:37:20.168Z).

Type: Timestamp

Required: No

**revisionId**

The revision ID of the Lambda function version.

Type: String

Required: No

**role**

The execution role of the Lambda function.

Type: String

Required: No

**tags**

A list of tags attached to this resource, listed in the format of key:value pair.

Type: Array of [Tag](#) objects

Required: No

**vpcConfig**

Amazon Virtual Private Cloud configuration details associated with your Lambda function.

Type: [VpcConfig](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# LineageObject

Information about the runtime process details.

## Contents

### euid

The effective user ID that was used to execute the process.

Type: Integer

Required: No

### executablePath

The absolute path of the process executable file.

Type: String

Required: No

### name

The name of the process.

Type: String

Required: No

### namespacePid

The process ID of the child process.

Type: Integer

Required: No

### parentUuid

The unique ID of the parent process. This ID is assigned to the parent process by GuardDuty.

Type: String

Required: No

**pid**

The ID of the process.

Type: Integer

Required: No

**startTime**

The time when the process started. This is in UTC format.

Type: Timestamp

Required: No

**userId**

The user ID of the user that executed the process.

Type: Integer

Required: No

**uuid**

The unique ID assigned to the process by GuardDuty.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# LocalIpDetails

Contains information about the local IP address of the connection.

## Contents

### ipAddressV4

The IPv4 local address of the connection.

Type: String

Required: No

### ipAddressV6

The IPv6 local address of the connection.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# LocalPortDetails

Contains information about the port for the local connection.

## Contents

### port

The port number of the local connection.

Type: Integer

Required: No

### portName

The port name of the local connection.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# LoginAttribute

Information about the login attempts.

## Contents

### application

Indicates the application name used to attempt log in.

Type: String

Required: No

### failedLoginAttempts

Represents the sum of failed (unsuccessful) login attempts made to establish a connection to the database instance.

Type: Integer

Required: No

### successfulLoginAttempts

Represents the sum of successful connections (a correct combination of login attributes) made to the database instance by the actor.

Type: Integer

Required: No

### user

Indicates the user name which attempted to log in.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# MalwareProtectionConfiguration

Describes whether Malware Protection will be enabled as a data source.

## Contents

### scanEc2InstanceWithFindings

Describes the configuration of Malware Protection for EC2 instances with findings.

Type: [ScanEc2InstanceWithFindings](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# MalwareProtectionConfigurationResult

An object that contains information on the status of all Malware Protection data sources.

## Contents

### scanEc2InstanceWithFindings

Describes the configuration of Malware Protection for EC2 instances with findings.

Type: [ScanEc2InstanceWithFindingsResult](#) object

Required: No

### serviceRole

The GuardDuty Malware Protection service role.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# MalwareProtectionDataSourceFreeTrial

Provides details about Malware Protection when it is enabled as a data source.

## Contents

### scanEc2InstanceWithFindings

Describes whether Malware Protection for EC2 instances with findings is enabled as a data source.

Type: [DataSourceFreeTrial](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# MalwareProtectionPlanActions

Information about whether the tags will be added to the S3 object after scanning.

## Contents

### tagging

Indicates whether the scanned S3 object will have tags about the scan result.

Type: [MalwareProtectionPlanTaggingAction](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# MalwareProtectionPlanStatusReason

Information about the issue code and message associated to the status of your Malware Protection plan.

## Contents

### code

Issue code.

Type: String

Required: No

### message

Issue message that specifies the reason. For information about potential troubleshooting steps, see [Troubleshooting Malware Protection for S3 status issues](#) in the *Amazon GuardDuty User Guide*.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# MalwareProtectionPlanSummary

Information about the Malware Protection plan resource.

## Contents

### malwareProtectionPlanId

A unique identifier associated with Malware Protection plan.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# MalwareProtectionPlanTaggingAction

Information about adding tags to the scanned S3 object after the scan result.

## Contents

### **status**

Indicates whether or not the tags will added.

Type: String

Valid Values: ENABLED | DISABLED

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# MalwareScanDetails

Information about the malware scan that generated a GuardDuty finding.

## Contents

### threats

Information about the detected threats associated with the generated GuardDuty finding.

Type: Array of [Threat](#) objects

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# Master

Contains information about the administrator account and invitation.

## Contents

### accountId

The ID of the account used as the administrator account.

Type: String

Length Constraints: Fixed length of 12.

Required: No

### invitationId

The value used to validate the administrator account to the member account.

Type: String

Required: No

### invitedAt

The timestamp when the invitation was sent.

Type: String

Required: No

### relationshipStatus

The status of the relationship between the administrator and member accounts.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# Member

Contains information about the member account.

## Contents

### accountId

The ID of the member account.

Type: String

Length Constraints: Fixed length of 12.

Required: Yes

### email

The email address of the member account.

Type: String

Length Constraints: Minimum length of 6. Maximum length of 64.

Pattern: See rules in parameter description

Required: Yes

### masterId

The administrator account ID.

Type: String

Required: Yes

### relationshipStatus

The status of the relationship between the member and the administrator.

Type: String

Required: Yes

### updatedAt

The last-updated timestamp of the member.

Type: String

Required: Yes

### **administratorId**

The administrator account ID.

Type: String

Required: No

### **detectorId**

The detector ID of the member account.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: No

### **invitedAt**

The timestamp when the invitation was sent.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# MemberAdditionalConfiguration

Information about the additional configuration for the member account.

## Contents

### **name**

Name of the additional configuration.

Type: String

Valid Values: EKS\_ADDON\_MANAGEMENT | ECS\_FARGATE\_AGENT\_MANAGEMENT | EC2\_AGENT\_MANAGEMENT

Required: No

### **status**

Status of the additional configuration.

Type: String

Valid Values: ENABLED | DISABLED

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# MemberAdditionalConfigurationResult

Information about the additional configuration for the member account.

## Contents

### **name**

Indicates the name of the additional configuration that is set for the member account.

Type: String

Valid Values: EKS\_ADDON\_MANAGEMENT | ECS\_FARGATE\_AGENT\_MANAGEMENT | EC2\_AGENT\_MANAGEMENT

Required: No

### **status**

Indicates the status of the additional configuration that is set for the member account.

Type: String

Valid Values: ENABLED | DISABLED

Required: No

### **updatedAt**

The timestamp at which the additional configuration was set for the member account. This is in UTC format.

Type: Timestamp

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)

- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# MemberDataSourceConfiguration

Contains information on which data sources are enabled for a member account.

## Contents

### accountId

The account ID for the member account.

Type: String

Length Constraints: Fixed length of 12.

Required: Yes

### dataSources

*This member has been deprecated.*

Contains information on the status of data sources for the account.

Type: [DataSourceConfigurationsResult](#) object

Required: No

### features

Contains information about the status of the features for the member account.

Type: Array of [MemberFeaturesConfigurationResult](#) objects

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# MemberFeaturesConfiguration

Contains information about the features for the member account.

## Contents

### additionalConfiguration

Additional configuration of the feature for the member account.

Type: Array of [MemberAdditionalConfiguration](#) objects

Required: No

### name

The name of the feature.

Type: String

Valid Values: S3\_DATA\_EVENTS | EKS\_AUDIT\_LOGS | EBS\_MALWARE\_PROTECTION  
| RDS\_LOGIN\_EVENTS | EKS\_RUNTIME\_MONITORING | LAMBDA\_NETWORK\_LOGS |  
RUNTIME\_MONITORING

Required: No

### status

The status of the feature.

Type: String

Valid Values: ENABLED | DISABLED

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)

- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# MemberFeaturesConfigurationResult

Contains information about the features for the member account.

## Contents

### additionalConfiguration

Indicates the additional configuration of the feature that is configured for the member account.

Type: Array of [MemberAdditionalConfigurationResult](#) objects

Required: No

### name

Indicates the name of the feature that is enabled for the detector.

Type: String

Valid Values: S3\_DATA\_EVENTS | EKS\_AUDIT\_LOGS | EBS\_MALWARE\_PROTECTION  
| RDS\_LOGIN\_EVENTS | EKS\_RUNTIME\_MONITORING | LAMBDA\_NETWORK\_LOGS |  
RUNTIME\_MONITORING

Required: No

### status

Indicates the status of the feature that is enabled for the detector.

Type: String

Valid Values: ENABLED | DISABLED

Required: No

### updatedAt

The timestamp at which the feature object was updated.

Type: Timestamp

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# NetworkConnection

Contains information about the network connection.

## Contents

### direction

The direction in which the network traffic is flowing.

Type: String

Valid Values: INBOUND | OUTBOUND

Required: Yes

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# NetworkConnectionAction

Contains information about the NETWORK\_CONNECTION action described in the finding.

## Contents

### blocked

Indicates whether EC2 blocked the network connection to your instance.

Type: Boolean

Required: No

### connectionDirection

The network connection direction.

Type: String

Required: No

### localIpDetails

The local IP information of the connection.

Type: [LocalIpDetails](#) object

Required: No

### localNetworkInterface

The EC2 instance's local elastic network interface utilized for the connection.

Type: String

Required: No

### localPortDetails

The local port information of the connection.

Type: [LocalPortDetails](#) object

Required: No

## protocol

The network connection protocol.

Type: String

Required: No

## remotelpDetails

The remote IP information of the connection.

Type: [RemotelpDetails](#) object

Required: No

## remotePortDetails

The remote port information of the connection.

Type: [RemotePortDetails](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# NetworkEndpoint

Contains information about network endpoints that were observed in the attack sequence.

## Contents

### **id**

The ID of the network endpoint.

Type: String

Required: Yes

### **autonomousSystem**

The Autonomous System (AS) of the network endpoint.

Type: [AutonomousSystem](#) object

Required: No

### **connection**

Information about the network connection.

Type: [NetworkConnection](#) object

Required: No

### **domain**

The domain information for the network endpoint.

Type: String

Required: No

### **ip**

The IP address associated with the network endpoint.

Type: String

Required: No

## location

Information about the location of the network endpoint.

Type: [NetworkGeoLocation](#) object

Required: No

## port

The port number associated with the network endpoint.

Type: Integer

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# NetworkGeoLocation

Contains information about network endpoint location.

## Contents

### **city**

The name of the city.

Type: String

Required: Yes

### **country**

The name of the country.

Type: String

Required: Yes

### **lat**

The latitude information of the endpoint location.

Type: Double

Required: Yes

### **lon**

The longitude information of the endpoint location.

Type: Double

Required: Yes

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)

- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# NetworkInterface

Contains information about the elastic network interface of the EC2 instance.

## Contents

### ipv6Addresses

A list of IPv6 addresses for the EC2 instance.

Type: Array of strings

Required: No

### networkInterfaceId

The ID of the network interface.

Type: String

Required: No

### privateDnsName

The private DNS name of the EC2 instance.

Type: String

Required: No

### privateIpAddress

The private IP address of the EC2 instance.

Type: String

Required: No

### privateIpAddresses

Other private IP address information of the EC2 instance.

Type: Array of [PrivateIpAddressDetails](#) objects

Required: No

**publicDnsName**

The public DNS name of the EC2 instance.

Type: String

Required: No

**publicIp**

The public IP address of the EC2 instance.

Type: String

Required: No

**securityGroups**

The security groups associated with the EC2 instance.

Type: Array of [SecurityGroup](#) objects

Required: No

**subnetId**

The subnet ID of the EC2 instance.

Type: String

Required: No

**vpcId**

The VPC ID of the EC2 instance.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# Observations

Contains information about the observed behavior.

## Contents

### text

The text that was unusual.

Type: Array of strings

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# Organization

Contains information about the ISP organization of the remote IP address.

## Contents

### asn

The Autonomous System Number (ASN) of the internet provider of the remote IP address.

Type: String

Required: No

### asnOrg

The organization that registered this ASN.

Type: String

Required: No

### isp

The ISP information for the internet provider.

Type: String

Required: No

### org

The name of the internet provider.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)

- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# OrganizationAdditionalConfiguration

A list of additional configurations which will be configured for the organization.

Additional configuration applies to only GuardDuty Runtime Monitoring protection plan.

## Contents

### autoEnable

The status of the additional configuration that will be configured for the organization. Use one of the following values to configure the feature status for the entire organization:

- NEW: Indicates that when a new account joins the organization, they will have the additional configuration enabled automatically.
- ALL: Indicates that all accounts in the organization have the additional configuration enabled automatically. This includes NEW accounts that join the organization and accounts that may have been suspended or removed from the organization in GuardDuty.

It may take up to 24 hours to update the configuration for all the member accounts.

- NONE: Indicates that the additional configuration will not be automatically enabled for any account in the organization. The administrator must manage the additional configuration for each account individually.

Type: String

Valid Values: NEW | NONE | ALL

Required: No

### name

The name of the additional configuration that will be configured for the organization. These values are applicable to only Runtime Monitoring protection plan.

Type: String

Valid Values: EKS\_ADDON\_MANAGEMENT | ECS\_FARGATE\_AGENT\_MANAGEMENT | EC2\_AGENT\_MANAGEMENT

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# OrganizationAdditionalConfigurationResult

A list of additional configuration which will be configured for the organization.

## Contents

### autoEnable

Describes the status of the additional configuration that is configured for the member accounts within the organization. One of the following values is the status for the entire organization:

- NEW: Indicates that when a new account joins the organization, they will have the additional configuration enabled automatically.
- ALL: Indicates that all accounts in the organization have the additional configuration enabled automatically. This includes NEW accounts that join the organization and accounts that may have been suspended or removed from the organization in GuardDuty.

It may take up to 24 hours to update the configuration for all the member accounts.

- NONE: Indicates that the additional configuration will not be automatically enabled for any account in the organization. The administrator must manage the additional configuration for each account individually.

Type: String

Valid Values: NEW | NONE | ALL

Required: No

### name

The name of the additional configuration that is configured for the member accounts within the organization. These values are applicable to only Runtime Monitoring protection plan.

Type: String

Valid Values: EKS\_ADDON\_MANAGEMENT | ECS\_FARGATE\_AGENT\_MANAGEMENT | EC2\_AGENT\_MANAGEMENT

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# OrganizationDataSourceConfigurations

An object that contains information on which data sources will be configured to be automatically enabled for new members within the organization.

## Contents

### kubernetes

Describes the configuration of Kubernetes data sources for new members of the organization.

Type: [OrganizationKubernetesConfiguration](#) object

Required: No

### malwareProtection

Describes the configuration of Malware Protection for new members of the organization.

Type: [OrganizationMalwareProtectionConfiguration](#) object

Required: No

### s3Logs

Describes whether S3 data event logs are enabled for new members of the organization.

Type: [OrganizationS3LogsConfiguration](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# OrganizationDataSourceConfigurationsResult

An object that contains information on which data sources are automatically enabled for new members within the organization.

## Contents

### s3Logs

Describes whether S3 data event logs are enabled as a data source.

Type: [OrganizationS3LogsConfigurationResult](#) object

Required: Yes

### kubernetes

Describes the configuration of Kubernetes data sources.

Type: [OrganizationKubernetesConfigurationResult](#) object

Required: No

### malwareProtection

Describes the configuration of Malware Protection data source for an organization.

Type: [OrganizationMalwareProtectionConfigurationResult](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# OrganizationDetails

Information about GuardDuty coverage statistics for members in your AWS organization.

## Contents

### organizationStatistics

Information about the GuardDuty coverage statistics for members in your AWS organization.

Type: [OrganizationStatistics](#) object

Required: No

### updatedAt

The timestamp at which the organization statistics was last updated. This is in UTC format.

Type: Timestamp

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# OrganizationEbsVolumes

Organization-wide EBS volumes scan configuration.

## Contents

### autoEnable

Whether scanning EBS volumes should be auto-enabled for new members joining the organization.

Type: Boolean

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# OrganizationEbsVolumesResult

An object that contains information on the status of whether EBS volumes scanning will be enabled as a data source for an organization.

## Contents

### autoEnable

An object that contains the status of whether scanning EBS volumes should be auto-enabled for new members joining the organization.

Type: Boolean

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# OrganizationFeatureConfiguration

A list of features which will be configured for the organization.

## Contents

### additionalConfiguration

The additional information that will be configured for the organization.

Type: Array of [OrganizationAdditionalConfiguration](#) objects

Required: No

### autoEnable

Describes the status of the feature that is configured for the member accounts within the organization. One of the following values is the status for the entire organization:

- NEW: Indicates that when a new account joins the organization, they will have the feature enabled automatically.
- ALL: Indicates that all accounts in the organization have the feature enabled automatically. This includes NEW accounts that join the organization and accounts that may have been suspended or removed from the organization in GuardDuty.

It may take up to 24 hours to update the configuration for all the member accounts.

- NONE: Indicates that the feature will not be automatically enabled for any account in the organization. The administrator must manage the feature for each account individually.

Type: String

Valid Values: NEW | NONE | ALL

Required: No

### name

The name of the feature that will be configured for the organization.

Type: String

Valid Values: S3\_DATA\_EVENTS | EKS\_AUDIT\_LOGS | EBS\_MALWARE\_PROTECTION  
| RDS\_LOGIN\_EVENTS | EKS\_RUNTIME\_MONITORING | LAMBDA\_NETWORK\_LOGS |  
RUNTIME\_MONITORING

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# OrganizationFeatureConfigurationResult

A list of features which will be configured for the organization.

## Contents

### additionalConfiguration

The additional configuration that is configured for the member accounts within the organization.

Type: Array of [OrganizationAdditionalConfigurationResult](#) objects

Required: No

### autoEnable

Describes the status of the feature that is configured for the member accounts within the organization.

- NEW: Indicates that when a new account joins the organization, they will have the feature enabled automatically.
- ALL: Indicates that all accounts in the organization have the feature enabled automatically. This includes NEW accounts that join the organization and accounts that may have been suspended or removed from the organization in GuardDuty.
- NONE: Indicates that the feature will not be automatically enabled for any account in the organization. In this case, each account will be managed individually by the administrator.

Type: String

Valid Values: NEW | NONE | ALL

Required: No

### name

The name of the feature that is configured for the member accounts within the organization.

Type: String

Valid Values: S3\_DATA\_EVENTS | EKS\_AUDIT\_LOGS | EBS\_MALWARE\_PROTECTION | RDS\_LOGIN\_EVENTS | EKS\_RUNTIME\_MONITORING | LAMBDA\_NETWORK\_LOGS | RUNTIME\_MONITORING

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# OrganizationFeatureStatistics

Information about the number of accounts that have enabled a specific feature.

## Contents

### additionalConfiguration

Name of the additional configuration.

Type: Array of [OrganizationFeatureStatisticsAdditionalConfiguration](#) objects

Required: No

### enabledAccountsCount

Total number of accounts that have enabled a specific feature.

Type: Integer

Required: No

### name

Name of the feature.

Type: String

Valid Values: S3\_DATA\_EVENTS | EKS\_AUDIT\_LOGS | EBS\_MALWARE\_PROTECTION | RDS\_LOGIN\_EVENTS | EKS\_RUNTIME\_MONITORING | LAMBDA\_NETWORK\_LOGS | RUNTIME\_MONITORING

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# OrganizationFeatureStatisticsAdditionalConfiguration

Information about the coverage statistic for the additional configuration of the feature.

## Contents

### enabledAccountsCount

Total number of accounts that have enabled the additional configuration.

Type: Integer

Required: No

### name

Name of the additional configuration within a feature.

Type: String

Valid Values: EKS\_ADDON\_MANAGEMENT | ECS\_FARGATE\_AGENT\_MANAGEMENT | EC2\_AGENT\_MANAGEMENT

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# OrganizationKubernetesAuditLogsConfiguration

Organization-wide Kubernetes audit logs configuration.

## Contents

### autoEnable

A value that contains information on whether Kubernetes audit logs should be enabled automatically as a data source for the organization.

Type: Boolean

Required: Yes

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# OrganizationKubernetesAuditLogsConfigurationResult

The current configuration of Kubernetes audit logs as a data source for the organization.

## Contents

### autoEnable

Whether Kubernetes audit logs data source should be auto-enabled for new members joining the organization.

Type: Boolean

Required: Yes

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# OrganizationKubernetesConfiguration

Organization-wide Kubernetes data sources configurations.

## Contents

### auditLogs

Whether Kubernetes audit logs data source should be auto-enabled for new members joining the organization.

Type: [OrganizationKubernetesAuditLogsConfiguration](#) object

Required: Yes

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# OrganizationKubernetesConfigurationResult

The current configuration of all Kubernetes data sources for the organization.

## Contents

### auditLogs

The current configuration of Kubernetes audit logs as a data source for the organization.

Type: [OrganizationKubernetesAuditLogsConfigurationResult](#) object

Required: Yes

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# OrganizationMalwareProtectionConfiguration

Organization-wide Malware Protection configurations.

## Contents

### scanEc2InstanceWithFindings

Whether Malware Protection for EC2 instances with findings should be auto-enabled for new members joining the organization.

Type: [OrganizationScanEc2InstanceWithFindings](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# OrganizationMalwareProtectionConfigurationResult

An object that contains information on the status of all Malware Protection data source for an organization.

## Contents

### scanEc2InstanceWithFindings

Describes the configuration for scanning EC2 instances with findings for an organization.

Type: [OrganizationScanEc2InstanceWithFindingsResult](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# OrganizationS3LogsConfiguration

Describes whether S3 data event logs will be automatically enabled for new members of the organization.

## Contents

### autoEnable

A value that contains information on whether S3 data event logs will be enabled automatically as a data source for the organization.

Type: Boolean

Required: Yes

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# OrganizationS3LogsConfigurationResult

The current configuration of S3 data event logs as a data source for the organization.

## Contents

### autoEnable

A value that describes whether S3 data event logs are automatically enabled for new members of the organization.

Type: Boolean

Required: Yes

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# OrganizationScanEc2InstanceWithFindings

Organization-wide EC2 instances with findings scan configuration.

## Contents

### ebsVolumes

Whether scanning EBS volumes should be auto-enabled for new members joining the organization.

Type: [OrganizationEbsVolumes](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# OrganizationScanEc2InstanceWithFindingsResult

An object that contains information on the status of scanning EC2 instances with findings for an organization.

## Contents

### ebsVolumes

Describes the configuration for scanning EBS volumes for an organization.

Type: [OrganizationEbsVolumesResult](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# OrganizationStatistics

Information about the coverage statistics of the features for the entire AWS organization.

When you create a new AWS organization, it might take up to 24 hours to generate the statistics summary for this organization.

## Contents

### **activeAccountsCount**

Total number of active accounts in your AWS organization that are associated with GuardDuty.

Type: Integer

Required: No

### **countByFeature**

Retrieves the coverage statistics for each feature.

Type: Array of [OrganizationFeatureStatistics](#) objects

Required: No

### **enabledAccountsCount**

Total number of accounts that have enabled GuardDuty.

Type: Integer

Required: No

### **memberAccountsCount**

Total number of accounts in your AWS organization that are associated with GuardDuty.

Type: Integer

Required: No

### **totalAccountsCount**

Total number of accounts in your AWS organization.

Type: Integer

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

## Owner

Contains information on the owner of the bucket.

### Contents

#### id

The canonical user ID of the bucket owner. For information about locating your canonical user ID see [Finding Your Account Canonical User ID](#).

Type: String

Required: No

### See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# PermissionConfiguration

Contains information about how permissions are configured for the S3 bucket.

## Contents

### accountLevelPermissions

Contains information about the account level permissions on the S3 bucket.

Type: [AccountLevelPermissions](#) object

Required: No

### bucketLevelPermissions

Contains information about the bucket level permissions for the S3 bucket.

Type: [BucketLevelPermissions](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# PortProbeAction

Contains information about the PORT\_PROBE action described in the finding.

## Contents

### blocked

Indicates whether EC2 blocked the port probe to the instance, such as with an ACL.

Type: Boolean

Required: No

### portProbeDetails

A list of objects related to port probe details.

Type: Array of [PortProbeDetail](#) objects

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# PortProbeDetail

Contains information about the port probe details.

## Contents

### localIpDetails

The local IP information of the connection.

Type: [LocalIpDetails](#) object

Required: No

### localPortDetails

The local port information of the connection.

Type: [LocalPortDetails](#) object

Required: No

### remoteIpDetails

The remote IP information of the connection.

Type: [RemotelpDetails](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# PrivateIpAddressDetails

Contains other private IP address information of the EC2 instance.

## Contents

### privateDnsName

The private DNS name of the EC2 instance.

Type: String

Required: No

### privateIpAddress

The private IP address of the EC2 instance.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# ProcessDetails

Information about the observed process.

## Contents

### euid

The effective user ID of the user that executed the process.

Type: Integer

Required: No

### executablePath

The absolute path of the process executable file.

Type: String

Required: No

### executableSha256

The SHA256 hash of the process executable.

Type: String

Required: No

### lineage

Information about the process's lineage.

Type: Array of [LineageObject](#) objects

Required: No

### name

The name of the process.

Type: String

Required: No

**namespacePid**

The ID of the child process.

Type: Integer

Required: No

**parentUuid**

The unique ID of the parent process. This ID is assigned to the parent process by GuardDuty.

Type: String

Required: No

**pid**

The ID of the process.

Type: Integer

Required: No

**pwd**

The present working directory of the process.

Type: String

Required: No

**startTime**

The time when the process started. This is in UTC format.

Type: Timestamp

Required: No

**user**

The user that executed the process.

Type: String

Required: No

**userId**

The unique ID of the user that executed the process.

Type: Integer

Required: No

**uuid**

The unique ID assigned to the process by GuardDuty.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# ProductCode

Contains information about the product code for the EC2 instance.

## Contents

### **productCodeId**

The product code information.

Type: String

Required: No

### **productCodeType**

The product code type.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# PublicAccess

Describes the public access policies that apply to the S3 bucket.

## Contents

### **effectivePermission**

Describes the effective permission on this bucket after factoring all attached policies.

Type: String

Required: No

### **permissionConfiguration**

Contains information about how permissions are configured for the S3 bucket.

Type: [PermissionConfiguration](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# PublicAccessConfiguration

Describes public access policies that apply to the Amazon S3 bucket.

For information about each of the following settings, see [Blocking public access to your Amazon S3 storage](#) in the *Amazon S3 User Guide*.

## Contents

### publicAclAccess

Indicates whether or not there is a setting that allows public access to the Amazon S3 buckets through access control lists (ACLs).

Type: String

Valid Values: BLOCKED | ALLOWED

Required: No

### publicAclIgnoreBehavior

Indicates whether or not there is a setting that ignores all public access control lists (ACLs) on the Amazon S3 bucket and the objects that it contains.

Type: String

Valid Values: IGNORED | NOT\_IGNORED

Required: No

### publicBucketRestrictBehavior

Indicates whether or not there is a setting that restricts access to the bucket with specified policies.

Type: String

Valid Values: RESTRICTED | NOT\_RESTRICTED

Required: No

### publicPolicyAccess

Indicates whether or not there is a setting that allows public access to the Amazon S3 bucket policy.

Type: String

Valid Values: BLOCKED | ALLOWED

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# RdsDbInstanceDetails

Contains information about the resource type RDSDBInstance involved in a GuardDuty finding.

## Contents

### dbClusterIdentifier

The identifier of the database cluster that contains the database instance ID involved in the finding.

Type: String

Required: No

### dbInstanceArn

The Amazon Resource Name (ARN) that identifies the database instance involved in the finding.

Type: String

Required: No

### dbInstanceIdentifier

The identifier associated to the database instance that was involved in the finding.

Type: String

Required: No

### engine

The database engine of the database instance involved in the finding.

Type: String

Required: No

### engineVersion

The version of the database engine that was involved in the finding.

Type: String

Required: No

## tags

Information about the tag key-value pairs.

Type: Array of [Tag](#) objects

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# RdsDbUserDetails

Contains information about the user and authentication details for a database instance involved in the finding.

## Contents

### application

The application name used in the anomalous login attempt.

Type: String

Required: No

### authMethod

The authentication method used by the user involved in the finding.

Type: String

Required: No

### database

The name of the database instance involved in the anomalous login attempt.

Type: String

Required: No

### ssl

The version of the Secure Socket Layer (SSL) used for the network.

Type: String

Required: No

### user

The user name used in the anomalous login attempt.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# RdsLimitlessDbDetails

Contains information about the resource type RDSLimitlessDB that is involved in a GuardDuty finding.

## Contents

### **dbClusterIdentifier**

The name of the database cluster that is a part of the Limitless Database.

Type: String

Required: No

### **dbShardGroupArn**

The Amazon Resource Name (ARN) that identifies the DB shard group.

Type: String

Required: No

### **dbShardGroupIdentifier**

The name associated with the Limitless DB shard group.

Type: String

Required: No

### **dbShardGroupResourceId**

The resource identifier of the DB shard group within the Limitless Database.

Type: String

Required: No

### **engine**

The database engine of the database instance involved in the finding.

Type: String

Required: No

## engineVersion

The version of the database engine.

Type: String

Required: No

## tags

Information about the tag key-value pair.

Type: Array of [Tag](#) objects

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# RdsLoginAttemptAction

Indicates that a login attempt was made to the potentially compromised database from a remote IP address.

## Contents

### LoginAttributes

Indicates the login attributes used in the login attempt.

Type: Array of [LoginAttribute](#) objects

Required: No

### remoteIpDetails

Contains information about the remote IP address of the connection.

Type: [RemotelpDetails](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# RemoteAccountDetails

Contains details about the remote AWS account that made the API call.

## Contents

### accountId

The AWS account ID of the remote API caller.

Type: String

Required: No

### affiliated

Details on whether the AWS account of the remote API caller is related to your GuardDuty environment. If this value is True the API caller is affiliated to your account in some way. If it is False the API caller is from outside your environment.

Type: Boolean

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# RemotelpDetails

Contains information about the remote IP address of the connection.

## Contents

### city

The city information of the remote IP address.

Type: [City](#) object

Required: No

### country

The country code of the remote IP address.

Type: [Country](#) object

Required: No

### geoLocation

The location information of the remote IP address.

Type: [GeoLocation](#) object

Required: No

### ipAddressV4

The IPv4 remote address of the connection.

Type: String

Required: No

### ipAddressV6

The IPv6 remote address of the connection.

Type: String

Required: No

## organization

The ISP organization information of the remote IP address.

Type: [Organization](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# RemotePortDetails

Contains information about the remote port.

## Contents

### port

The port number of the remote connection.

Type: Integer

Required: No

### portName

The port name of the remote connection.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# Resource

Contains information about the AWS resource associated with the activity that prompted GuardDuty to generate a finding.

## Contents

### accessKeyDetails

The IAM access key details (user information) of a user that engaged in the activity that prompted GuardDuty to generate a finding.

Type: [AccessKeyDetails](#) object

Required: No

### containerDetails

Details of a container.

Type: [Container](#) object

Required: No

### ebsVolumeDetails

Contains list of scanned and skipped EBS volumes with details.

Type: [EbsVolumeDetails](#) object

Required: No

### ecsClusterDetails

Contains information about the details of the ECS Cluster.

Type: [EcsClusterDetails](#) object

Required: No

### eksClusterDetails

Details about the EKS cluster involved in a Kubernetes finding.

Type: [EksClusterDetails](#) object

Required: No

### **instanceDetails**

The information about the EC2 instance associated with the activity that prompted GuardDuty to generate a finding.

Type: [InstanceDetails](#) object

Required: No

### **kubernetesDetails**

Details about the Kubernetes user and workload involved in a Kubernetes finding.

Type: [KubernetesDetails](#) object

Required: No

### **lambdaDetails**

Contains information about the Lambda function that was involved in a finding.

Type: [LambdaDetails](#) object

Required: No

### **rdsDbInstanceDetails**

Contains information about the database instance to which an anomalous login attempt was made.

Type: [RdsDbInstanceDetails](#) object

Required: No

### **rdsDbUserDetails**

Contains information about the user details through which anomalous login attempt was made.

Type: [RdsDbUserDetails](#) object

Required: No

### **rdsLimitlessDbDetails**

Contains information about the RDS Limitless database that was involved in a GuardDuty finding.

Type: [RdsLimitlessDbDetails](#) object

Required: No

### **resourceType**

The type of AWS resource.

Type: String

Required: No

### **s3BucketDetails**

Contains information on the S3 bucket.

Type: Array of [S3BucketDetail](#) objects

Required: No

## **See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# ResourceData

Contains information about the AWS resource that is associated with the activity that prompted GuardDuty to generate a finding.

## Contents

### accessKey

Contains information about the IAM access key details of a user that involved in the GuardDuty finding.

Type: [AccessKey](#) object

Required: No

### container

Contains detailed information about the container associated with the activity that prompted GuardDuty to generate a finding.

Type: [ContainerFindingResource](#) object

Required: No

### ec2Instance

Contains information about the Amazon EC2 instance.

Type: [Ec2Instance](#) object

Required: No

### ec2NetworkInterface

Contains information about the elastic network interface of the Amazon EC2 instance.

Type: [Ec2NetworkInterface](#) object

Required: No

### eksCluster

Contains detailed information about the Amazon EKS cluster associated with the activity that prompted GuardDuty to generate a finding.

Type: [EksCluster](#) object

Required: No

### kubernetesWorkload

Contains detailed information about the Kubernetes workload associated with the activity that prompted GuardDuty to generate a finding.

Type: [KubernetesWorkload](#) object

Required: No

### s3Bucket

Contains information about the Amazon S3 bucket.

Type: [S3Bucket](#) object

Required: No

### s3Object

Contains information about the Amazon S3 object.

Type: [S3Object](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# ResourceDetails

Represents the resources that were scanned in the scan entry.

## Contents

### instanceArn

Instance ARN that was scanned in the scan entry.

Type: String

Pattern: ^arn:(aws|aws-cn|aws-us-gov):[a-z]+:[a-z]+(-[0-9]+|-[a-z]+)+:([0-9]{12}):[a-z\-\-]+\/[a-zA-Z0-9]\*\$

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# ResourceStatistics

Information about each resource type associated with the groupedByResource statistics.

## Contents

### accountId

The ID of the AWS account.

Type: String

Required: No

### lastGeneratedAt

The timestamp at which the statistics for this resource was last generated.

Type: Timestamp

Required: No

### resourceId

ID associated with each resource. The following list provides the mapping of the resource type and resource ID.

#### Mapping of resource and resource ID

- AccessKey - `resource.accessKeyDetails.accessKeyId`
- Container - `resource.containerDetails.id`
- ECSCluster - `resource.ecsClusterDetails.name`
- EKSCluster - `resource.eksClusterDetails.name`
- Instance - `resource.instanceDetails.instanceId`
- KubernetesCluster -  
`resource.kubernetesDetails.kubernetesWorkloadDetails.name`
- Lambda - `resource.lambdaDetails.functionName`
- RDSDBInstance - `resource.rdsDbInstanceDetails.dbInstanceIdentifier`
- S3Bucket - `resource.s3BucketDetails.name`
- S3Object - `resource.s3BucketDetails.name`

Type: String

Required: No

### **resourceType**

The type of resource.

Type: String

Required: No

### **totalFindings**

The total number of findings associated with this resource.

Type: Integer

Required: No

## **See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# ResourceV2

Contains information about the AWS resource that is associated with the GuardDuty finding.

## Contents

### **resourceType**

The type of the AWS resource.

Type: String

Valid Values: EC2\_INSTANCE | EC2\_NETWORK\_INTERFACE | S3\_BUCKET | S3\_OBJECT | ACCESS\_KEY | EKS\_CLUSTER | KUBERNETES\_WORKLOAD | CONTAINER

Required: Yes

### **uid**

The unique identifier of the resource.

Type: String

Required: Yes

### **accountId**

The AWS account ID to which the resource belongs.

Type: String

Required: No

### **cloudPartition**

The cloud partition within the AWS Region to which the resource belongs.

Type: String

Required: No

### **data**

Contains information about the AWS resource associated with the activity that prompted GuardDuty to generate a finding.

Type: [ResourceData](#) object

Required: No

### name

The name of the resource.

Type: String

Required: No

### region

The AWS Region where the resource belongs.

Type: String

Required: No

### service

The AWS service of the resource.

Type: String

Required: No

### tags

Contains information about the tags associated with the resource.

Type: Array of [Tag](#) objects

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# RuntimeContext

Additional information about the suspicious activity.

## Contents

### addressFamily

Represents the communication protocol associated with the address. For example, the address family AF\_INET is used for IP version of 4 protocol.

Type: String

Required: No

### commandLineExample

Example of the command line involved in the suspicious activity.

Type: String

Required: No

### fileSystemType

Represents the type of mounted fileSystem.

Type: String

Required: No

### flags

Represents options that control the behavior of a runtime operation or action. For example, a filesystem mount operation may contain a read-only flag.

Type: Array of strings

Required: No

### ianaProtocolNumber

Specifies a particular protocol within the address family. Usually there is a single protocol in address families. For example, the address family AF\_INET only has the IP protocol.

Type: Integer

Required: No

### **ldPreloadValue**

The value of the LD\_PRELOAD environment variable.

Type: String

Required: No

### **libraryPath**

The path to the new library that was loaded.

Type: String

Required: No

### **memoryRegions**

Specifies the Region of a process's address space such as stack and heap.

Type: Array of strings

Required: No

### **modifiedAt**

The timestamp at which the process modified the current process. The timestamp is in UTC date string format.

Type: Timestamp

Required: No

### **modifyingProcess**

Information about the process that modified the current process. This is available for multiple finding types.

Type: [ProcessDetails](#) object

Required: No

**moduleFilePath**

The path to the module loaded into the kernel.

Type: String

Required: No

**moduleName**

The name of the module loaded into the kernel.

Type: String

Required: No

**moduleSha256**

The SHA256 hash of the module.

Type: String

Required: No

**mountSource**

The path on the host that is mounted by the container.

Type: String

Required: No

**mountTarget**

The path in the container that is mapped to the host directory.

Type: String

Required: No

**releaseAgentPath**

The path in the container that modified the release agent file.

Type: String

Required: No

**runcBinaryPath**

The path to the leveraged runc implementation.

Type: String

Required: No

**scriptPath**

The path to the script that was executed.

Type: String

Required: No

**serviceName**

Name of the security service that has been potentially disabled.

Type: String

Required: No

**shellHistoryFilePath**

The path to the modified shell history file.

Type: String

Required: No

**socketPath**

The path to the docket socket that was accessed.

Type: String

Required: No

**targetProcess**

Information about the process that had its memory overwritten by the current process.

Type: [ProcessDetails](#) object

Required: No

**threatFilePath**

The suspicious file path for which the threat intelligence details were found.

Type: String

Required: No

**toolCategory**

Category that the tool belongs to. Some of the examples are Backdoor Tool, Pentest Tool, Network Scanner, and Network Sniffer.

Type: String

Required: No

**toolName**

Name of the potentially suspicious tool.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# RuntimeDetails

Information about the process and any required context values for a specific finding.

## Contents

### context

Additional information about the suspicious activity.

Type: [RuntimeContext](#) object

Required: No

### process

Information about the observed process.

Type: [ProcessDetails](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# S3Bucket

Contains information about the Amazon S3 bucket policies and encryption.

## Contents

### accountPublicAccess

Contains information about the public access policies that apply to the Amazon S3 bucket at the account level.

Type: [PublicAccessConfiguration](#) object

Required: No

### bucketPublicAccess

Contains information about public access policies that apply to the Amazon S3 bucket.

Type: [PublicAccessConfiguration](#) object

Required: No

### createdAt

The timestamp at which the Amazon S3 bucket was created.

Type: Timestamp

Required: No

### effectivePermission

Describes the effective permissions on this S3 bucket, after factoring all the attached policies.

Type: String

Required: No

### encryptionKeyArn

The Amazon Resource Name (ARN) of the encryption key that is used to encrypt the Amazon S3 bucket and its objects.

Type: String

Required: No

### **encryptionType**

The type of encryption used for the Amazon S3 buckets and its objects. For more information, see [Protecting data with server-side encryption](#) in the *Amazon S3 User Guide*.

Type: String

Required: No

### **ownerId**

The owner ID of the associated S3Amazon S3bucket.

Type: String

Required: No

### **publicReadAccess**

Indicates whether or not the public read access is allowed for an Amazon S3 bucket.

Type: String

Valid Values: BLOCKED | ALLOWED

Required: No

### **publicWriteAccess**

Indicates whether or not the public write access is allowed for an Amazon S3 bucket.

Type: String

Valid Values: BLOCKED | ALLOWED

Required: No

### **s3ObjectUids**

Represents a list of Amazon S3 object identifiers.

Type: Array of strings

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# S3BucketDetail

Contains information on the S3 bucket.

## Contents

### arn

The Amazon Resource Name (ARN) of the S3 bucket.

Type: String

Required: No

### createdAt

The date and time the bucket was created at.

Type: Timestamp

Required: No

### defaultServerSideEncryption

Describes the server side encryption method used in the S3 bucket.

Type: [DefaultServerSideEncryption](#) object

Required: No

### name

The name of the S3 bucket.

Type: String

Required: No

### owner

The owner of the S3 bucket.

Type: [Owner](#) object

Required: No

## publicAccess

Describes the public access policies that apply to the S3 bucket.

Type: [PublicAccess](#) object

Required: No

## s3ObjectDetails

Information about the S3 object that was scanned.

Type: Array of [S3ObjectDetail](#) objects

Required: No

## tags

All tags attached to the S3 bucket

Type: Array of [Tag](#) objects

Required: No

## type

Describes whether the bucket is a source or destination bucket.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# S3LogsConfiguration

Describes whether S3 data event logs will be enabled as a data source.

## Contents

### enable

The status of S3 data event logs as a data source.

Type: Boolean

Required: Yes

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# S3LogsConfigurationResult

Describes whether S3 data event logs will be enabled as a data source.

## Contents

### status

A value that describes whether S3 data event logs are automatically enabled for new members of the organization.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

Valid Values: ENABLED | DISABLED

Required: Yes

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# S3Object

Contains information about the Amazon S3 object.

## Contents

### eTag

The entity tag is a hash of the Amazon S3 object. The ETag reflects changes only to the contents of an object, and not its metadata.

Type: String

Required: No

### key

The key of the Amazon S3 object.

Type: String

Required: No

### versionId

The version Id of the Amazon S3 object.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# S3ObjectDetail

Information about the S3 object that was scanned

## Contents

### eTag

The entity tag is a hash of the S3 object. The ETag reflects changes only to the contents of an object, and not its metadata.

Type: String

Required: No

### hash

Hash of the threat detected in this finding.

Type: String

Required: No

### key

Key of the S3 object.

Type: String

Required: No

### objectArn

Amazon Resource Name (ARN) of the S3 object.

Type: String

Required: No

### versionId

Version ID of the object.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# Scan

Contains information about malware scans associated with GuardDuty Malware Protection for EC2.

## Contents

### accountId

The ID for the account that belongs to the scan.

Type: String

Length Constraints: Fixed length of 12.

Required: No

### adminDetectorId

The unique detector ID of the administrator account that the request is associated with. If the account is an administrator, the AdminDetectorId will be the same as the one used for DetectorId.

To find the detectorId in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: No

### attachedVolumes

List of volumes that were attached to the original instance to be scanned.

Type: Array of [VolumeDetail](#) objects

Required: No

### detectorId

The unique ID of the detector that is associated with the request.

To find the detectorId in the current Region, see the Settings page in the GuardDuty console, or run the [ListDetectors](#) API.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: No

### **failureReason**

Represents the reason for FAILED scan status.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 200.

Required: No

### **fileCount**

Represents the number of files that were scanned.

Type: Long

Valid Range: Minimum value of 0.

Required: No

### **resourceDetails**

Represents the resources that were scanned in the scan entry.

Type: [ResourceDetails](#) object

Required: No

### **scanEndTime**

The timestamp of when the scan was finished.

Type: Timestamp

Required: No

### **scanId**

The unique scan ID associated with a scan entry.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 200.

Required: No

### **scanResultDetails**

Represents the result of the scan.

Type: [ScanResultDetails](#) object

Required: No

### **scanStartTime**

The timestamp of when the scan was triggered.

Type: Timestamp

Required: No

### **scanStatus**

An enum value representing possible scan statuses.

Type: String

Valid Values: RUNNING | COMPLETED | FAILED | SKIPPED

Required: No

### **scanType**

Specifies the scan type that invoked the malware scan.

Type: String

Valid Values: GUARDDUTY\_INITIATED | ON\_DEMAND

Required: No

### **totalBytes**

Represents total bytes that were scanned.

Type: Long

Valid Range: Minimum value of 0.

Required: No

## triggerDetails

Specifies the reason why the scan was initiated.

Type: [TriggerDetails](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# ScanCondition

Contains information about the condition.

## Contents

### mapEquals

Represents an *mapEqual* condition to be applied to a single field when triggering for malware scan.

Type: Array of [ScanConditionPair](#) objects

Required: Yes

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# ScanConditionPair

Represents the key:value pair to be matched against given resource property.

## Contents

### key

Represents the **key** in the map condition.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 128.

Pattern: ^(? !aws : )[a-zA-Z+-=.\_:/]+\$

Required: Yes

### value

Represents optional **value** in the map condition. If not specified, only the **key** will be matched.

Type: String

Length Constraints: Maximum length of 256.

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# ScanDetections

Contains a complete view providing malware scan result details.

## Contents

### **highestSeverityThreatDetails**

Details of the highest severity threat detected during malware scan and number of infected files.

Type: [HighestSeverityThreatDetails](#) object

Required: No

### **scannedItemCount**

Total number of scanned files.

Type: [ScannedItemCount](#) object

Required: No

### **threatDetectedByName**

Contains details about identified threats organized by threat name.

Type: [ThreatDetectedByName](#) object

Required: No

### **threatsDetectedItemCount**

Total number of infected files.

Type: [ThreatsDetectedItemCount](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# ScanEc2InstanceWithFindings

Describes whether Malware Protection for EC2 instances with findings will be enabled as a data source.

## Contents

### ebsVolumes

Describes the configuration for scanning EBS volumes as data source.

Type: Boolean

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# ScanEc2InstanceWithFindingsResult

An object that contains information on the status of whether Malware Protection for EC2 instances with findings will be enabled as a data source.

## Contents

### ebsVolumes

Describes the configuration of scanning EBS volumes as a data source.

Type: [EbsVolumesResult](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# ScanFilePath

Contains details of infected file including name, file path and hash.

## Contents

### fileName

The file name of the infected file.

Type: String

Required: No

### filePath

The file path of the infected file.

Type: String

Required: No

### hash

The hash value of the infected file.

Type: String

Required: No

### volumeArn

EBS volume ARN details of the infected file.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)

- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# ScannedItemCount

Total number of scanned files.

## Contents

### files

Number of files scanned.

Type: Integer

Required: No

### totalGb

Total GB of files scanned for malware.

Type: Integer

Required: No

### volumes

Total number of scanned volumes.

Type: Integer

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# ScanResourceCriteria

Contains information about criteria used to filter resources before triggering malware scan.

## Contents

### exclude

Represents condition that when matched will prevent a malware scan for a certain resource.

Type: String to [ScanCondition](#) object map

Valid Keys: EC2\_INSTANCE\_TAG

Required: No

### include

Represents condition that when matched will allow a malware scan for a certain resource.

Type: String to [ScanCondition](#) object map

Valid Keys: EC2\_INSTANCE\_TAG

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# ScanResultDetails

Represents the result of the scan.

## Contents

### scanResult

An enum value representing possible scan results.

Type: String

Valid Values: CLEAN | INFECTED

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# ScanThreatName

Contains files infected with the given threat providing details of malware name and severity.

## Contents

### filePaths

List of infected files in EBS volume with details.

Type: Array of [ScanFilePath](#) objects

Required: No

### itemCount

Total number of files infected with given threat.

Type: Integer

Required: No

### name

The name of the identified threat.

Type: String

Required: No

### severity

Severity of threat identified as part of the malware scan.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)

- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# SecurityContext

Container security context.

## Contents

### allowPrivilegeEscalation

Whether or not a container or a Kubernetes pod is allowed to gain more privileges than its parent process.

Type: Boolean

Required: No

### privileged

Whether the container is privileged.

Type: Boolean

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# SecurityGroup

Contains information about the security groups associated with the EC2 instance.

## Contents

### groupId

The security group ID of the EC2 instance.

Type: String

Required: No

### groupName

The security group name of the EC2 instance.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# Sequence

Contains information about the GuardDuty attack sequence finding.

## Contents

### **description**

Description of the attack sequence.

Type: String

Length Constraints: Maximum length of 4096.

Required: Yes

### **signals**

Contains information about the signals involved in the attack sequence.

Type: Array of [Signal](#) objects

Array Members: Minimum number of 1 item. Maximum number of 100 items.

Required: Yes

### **uid**

Unique identifier of the attack sequence.

Type: String

Required: Yes

### **actors**

Contains information about the actors involved in the attack sequence.

Type: Array of [Actor](#) objects

Array Members: Maximum number of 400 items.

Required: No

## additionalSequenceTypes

Additional types of sequences that may be associated with the attack sequence finding, providing further context about the nature of the detected threat.

Type: Array of strings

Length Constraints: Minimum length of 1. Maximum length of 50.

Required: No

## endpoints

Contains information about the network endpoints that were used in the attack sequence.

Type: Array of [NetworkEndpoint](#) objects

Array Members: Maximum number of 400 items.

Required: No

## resources

Contains information about the resources involved in the attack sequence.

Type: Array of [ResourceV2](#) objects

Array Members: Maximum number of 400 items.

Required: No

## sequenceIndicators

Contains information about the indicators observed in the attack sequence.

Type: Array of [Indicator](#) objects

Array Members: Maximum number of 400 items.

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# Service

Contains additional information about the generated finding.

## Contents

### **action**

Information about the activity that is described in a finding.

Type: [Action](#) object

Required: No

### **additionalInfo**

Contains additional information about the generated finding.

Type: [ServiceAdditionalInfo](#) object

Required: No

### **archived**

Indicates whether this finding is archived.

Type: Boolean

Required: No

### **count**

The total count of the occurrences of this finding type.

Type: Integer

Required: No

### **detection**

Contains information about the detected unusual behavior.

Type: [Detection](#) object

Required: No

**detectorId**

The detector ID for the GuardDuty service.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: No

**ebsVolumeScanDetails**

Returns details from the malware scan that created a finding.

Type: [EbsVolumeScanDetails](#) object

Required: No

**eventFirstSeen**

The first-seen timestamp of the activity that prompted GuardDuty to generate this finding.

Type: String

Required: No

**eventLastSeen**

The last-seen timestamp of the activity that prompted GuardDuty to generate this finding.

Type: String

Required: No

**evidence**

An evidence object associated with the service.

Type: [Evidence](#) object

Required: No

**featureName**

The name of the feature that generated a finding.

Type: String

Required: No

### **malwareScanDetails**

Returns details from the malware scan that generated a GuardDuty finding.

Type: [MalwareScanDetails](#) object

Required: No

### **resourceRole**

The resource role information for this finding.

Type: String

Required: No

### **runtimeDetails**

Information about the process and any required context values for a specific finding

Type: [RuntimeDetails](#) object

Required: No

### **serviceName**

The name of the AWS service (GuardDuty) that generated a finding.

Type: String

Required: No

### **userFeedback**

Feedback that was submitted about the finding.

Type: String

Required: No

## **See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# ServiceAdditionalInfo

Additional information about the generated finding.

## Contents

### type

Describes the type of the additional information.

Type: String

Required: No

### value

This field specifies the value of the additional information.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# Session

Contains information about the authenticated session.

## Contents

### **createdTime**

The timestamp for when the session was created.

In AWS CloudTrail, you can find this value as  
`userIdentity.sessionContext.attributes.creationDate`.

Type: Timestamp

Required: No

### **issuer**

Identifier of the session issuer.

In AWS CloudTrail, you can find this value as  
`userIdentity.sessionContext.sessionIssuer.arn`.

Type: String

Required: No

### **mfaStatus**

Indicates whether or not multi-factor authentication (MFA) was used during authentication.

In AWS CloudTrail, you can find this value as  
`userIdentity.sessionContext.attributes.mfaAuthenticated`.

Type: String

Valid Values: ENABLED | DISABLED

Required: No

### **uid**

The unique identifier of the session.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# SeverityStatistics

Information about severity level for each finding type.

## Contents

### **lastGeneratedAt**

The timestamp at which a finding type for a specific severity was last generated.

Type: Timestamp

Required: No

### **severity**

The severity level associated with each finding type.

Type: Double

Required: No

### **totalFindings**

The total number of findings associated with this severity.

Type: Integer

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# Signal

Contains information about the signals involved in the attack sequence.

## Contents

### count

The number of times this signal was observed.

Type: Integer

Required: Yes

### createdAt

The timestamp when the first finding or activity related to this signal was observed.

Type: Timestamp

Required: Yes

### firstSeenAt

The timestamp when the first finding or activity related to this signal was observed.

Type: Timestamp

Required: Yes

### lastSeenAt

The timestamp when the last finding or activity related to this signal was observed.

Type: Timestamp

Required: Yes

### name

The name of the signal. For example, when signal type is FINDING, the signal name is the name of the finding.

Type: String

Required: Yes

**type**

The type of the signal used to identify an attack sequence.

Signals can be GuardDuty findings or activities observed in data sources that GuardDuty monitors. For more information, see [Foundational data sources](#) in the *Amazon GuardDuty User Guide*.

A signal type can be one of the valid values listed in this API. Here are the related descriptions:

- FINDING - Individually generated GuardDuty finding.
- CLOUD\_TRAIL - Activity observed from CloudTrail logs
- S3\_DATA\_EVENTS - Activity observed from CloudTrail data events for S3. Activities associated with this type will show up only when you have enabled GuardDuty S3 Protection feature in your account. For more information about S3 Protection and steps to enable it, see [S3 Protection](#) in the *Amazon GuardDuty User Guide*.

Type: String

Valid Values: FINDING | CLOUD\_TRAIL | S3\_DATA\_EVENTS | EKS\_AUDIT\_LOGS | FLOW\_LOGS | DNS\_LOGS | RUNTIME\_MONITORING

Required: Yes

**uid**

The unique identifier of the signal.

Type: String

Required: Yes

**updatedAt**

The timestamp when this signal was last observed.

Type: Timestamp

Required: Yes

**actorIds**

Information about the IDs of the threat actors involved in the signal.

Type: Array of strings

Array Members: Maximum number of 400 items.

Required: No

### **description**

The description of the signal.

Type: String

Length Constraints: Maximum length of 2000.

Required: No

### **endpointIds**

Information about the endpoint IDs associated with this signal.

Type: Array of strings

Array Members: Maximum number of 400 items.

Required: No

### **resourceUids**

Information about the unique identifiers of the resources involved in the signal.

Type: Array of strings

Array Members: Maximum number of 400 items.

Required: No

### **severity**

The severity associated with the signal. For more information about severity, see [Findings severity levels](#) in the *Amazon GuardDuty User Guide*.

Type: Double

Required: No

### **signalIndicators**

Contains information about the indicators associated with the signals.

Type: Array of [Indicator](#) objects

Array Members: Maximum number of 400 items.

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# SortCriteria

Contains information about the criteria used for sorting findings.

## Contents

### attributeName

Represents the finding attribute, such as accountId, that sorts the findings.

Type: String

Required: No

### orderBy

The order by which the sorted findings are to be displayed.

Type: String

Valid Values: ASC | DESC

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# Tag

Contains information about a tag key-value pair.

## Contents

### key

Describes the key associated with the tag.

Type: String

Required: No

### value

Describes the value associated with the tag key.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# Threat

Information about the detected threats associated with the generated finding.

## Contents

### itemPaths

Information about the nested item path and hash of the protected resource.

Type: Array of [ItemPath](#) objects

Required: No

### name

Name of the detected threat that caused GuardDuty to generate this finding.

Type: String

Required: No

### source

Source of the threat that generated this finding.

Type: String

Required: No

## See Also

# ThreatDetectedByName

Contains details about identified threats organized by threat name.

## Contents

### **itemCount**

Total number of infected files identified.

Type: Integer

Required: No

### **shortened**

Flag to determine if the finding contains every single infected file-path and/or every threat.

Type: Boolean

Required: No

### **threatNames**

List of identified threats with details, organized by threat name.

Type: Array of [ScanThreatName](#) objects

Required: No

### **uniqueThreatNameCount**

Total number of unique threats by name identified, as part of the malware scan.

Type: Integer

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)

- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# ThreatIntelligenceDetail

An instance of a threat intelligence detail that constitutes evidence for the finding.

## Contents

### threatFileSha256

SHA256 of the file that generated the finding.

Type: String

Required: No

### threatListName

The name of the threat intelligence list that triggered the finding.

Type: String

Required: No

### threatNames

A list of names of the threats in the threat intelligence list that triggered the finding.

Type: Array of strings

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# ThreatsDetectedItemCount

Contains total number of infected files.

## Contents

### files

Total number of infected files.

Type: Integer

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# Total

Contains the total usage with the corresponding currency unit for that value.

## Contents

### amount

The total usage.

Type: String

Required: No

### unit

The currency unit that the amount is given in.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# TriggerDetails

Represents the reason the scan was triggered.

## Contents

### **description**

The description of the scan trigger.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 200.

Required: No

### **guardDutyFindingId**

The ID of the GuardDuty finding that triggered the malware scan.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 200.

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# UnprocessedAccount

Contains information about the accounts that weren't processed.

## Contents

### accountId

The AWS account ID.

Type: String

Length Constraints: Fixed length of 12.

Required: Yes

### result

A reason why the account hasn't been processed.

Type: String

Required: Yes

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# UnprocessedDataSourcesResult

Specifies the names of the data sources that couldn't be enabled.

## Contents

### malwareProtection

An object that contains information on the status of all Malware Protection data sources.

Type: [MalwareProtectionConfigurationResult](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# UpdateProtectedResource

Information about the protected resource that is associated with the created Malware Protection plan. Presently, S3Bucket is the only supported protected resource.

## Contents

### s3Bucket

Information about the protected S3 bucket resource.

Type: [UpdateS3BucketResource](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# UpdateS3BucketResource

Information about the protected S3 bucket resource.

## Contents

### objectPrefixes

Information about the specified object prefixes. The S3 object will be scanned only if it belongs to any of the specified object prefixes.

Type: Array of strings

Array Members: Minimum number of 0 items. Maximum number of 5 items.

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# UsageAccountResult

Contains information on the total of usage based on account IDs.

## Contents

### accountId

The Account ID that generated usage.

Type: String

Length Constraints: Fixed length of 12.

Required: No

### total

Represents the total of usage for the Account ID.

Type: [Total](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# UsageCriteria

Contains information about the criteria used to query usage statistics.

## Contents

### accountIds

The account IDs to aggregate usage statistics from.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 50 items.

Length Constraints: Fixed length of 12.

Required: No

### dataSources

*This member has been deprecated.*

The data sources to aggregate usage statistics from.

Type: Array of strings

Valid Values: FLOW\_LOGS | CLOUD\_TRAIL | DNS\_LOGS | S3\_LOGS | KUBERNETES\_AUDIT\_LOGS | EC2\_MALWARE\_SCAN

Required: No

### features

The features to aggregate usage statistics from.

Type: Array of strings

Valid Values: FLOW\_LOGS | CLOUD\_TRAIL | DNS\_LOGS | S3\_DATA\_EVENTS | EKS\_AUDIT\_LOGS | EBS\_MALWARE\_PROTECTION | RDS\_LOGIN\_EVENTS | LAMBDA\_NETWORK\_LOGS | EKS\_RUNTIME\_MONITORING | FARGATE\_RUNTIME\_MONITORING | EC2\_RUNTIME\_MONITORING | RDS\_DB\_I\_PROTECTION\_PROVISIONED | RDS\_DB\_I\_PROTECTION\_SERVERLESS

Required: No

## resources

The resources to aggregate usage statistics from. Only accepts exact resource names.

Type: Array of strings

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# UsageDataSourceResult

Contains information on the result of usage based on data source type.

## Contents

### **dataSource**

The data source type that generated usage.

Type: String

Valid Values: FLOW\_LOGS | CLOUD\_TRAIL | DNS\_LOGS | S3\_LOGS | KUBERNETES\_AUDIT\_LOGS | EC2\_MALWARE\_SCAN

Required: No

### **total**

Represents the total of usage for the specified data source.

Type: [Total](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# UsageFeatureResult

Contains information about the result of the total usage based on the feature.

## Contents

### **feature**

The feature that generated the usage cost.

Type: String

Valid Values: FLOW\_LOGS | CLOUD\_TRAIL | DNS\_LOGS | S3\_DATA\_EVENTS  
| EKS\_AUDIT\_LOGS | EBS\_MALWARE\_PROTECTION | RDS\_LOGIN\_EVENTS  
| LAMBDA\_NETWORK\_LOGS | EKS\_RUNTIME\_MONITORING |  
FARGATE\_RUNTIME\_MONITORING | EC2\_RUNTIME\_MONITORING |  
RDS\_DB\_I\_PROTECTION\_PROVISIONED | RDS\_DB\_I\_PROTECTION\_SERVERLESS

Required: No

### **total**

Contains the total usage with the corresponding currency unit for that value.

Type: [Total](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# UsageResourceResult

Contains information on the sum of usage based on an AWS resource.

## Contents

### **resource**

The AWS resource that generated usage.

Type: String

Required: No

### **total**

Represents the sum total of usage for the specified resource type.

Type: [Total](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# UsageStatistics

Contains the result of GuardDuty usage. If a UsageStatisticType is provided the result for other types will be null.

## Contents

### sumByAccount

The usage statistic sum organized by account ID.

Type: Array of [UsageAccountResult](#) objects

Required: No

### sumByDataSource

The usage statistic sum organized by on data source.

Type: Array of [UsageDataSourceResult](#) objects

Required: No

### sumByFeature

The usage statistic sum organized by feature.

Type: Array of [UsageFeatureResult](#) objects

Required: No

### sumByResource

The usage statistic sum organized by resource.

Type: Array of [UsageResourceResult](#) objects

Required: No

### topAccountsByFeature

Lists the top 50 accounts by feature that have generated the most GuardDuty usage, in the order from most to least expensive.

Currently, this doesn't support RDS\_LOGIN\_EVENTS.

Type: Array of [UsageTopAccountsResult](#) objects

Required: No

### topResources

Lists the top 50 resources that have generated the most GuardDuty usage, in order from most to least expensive.

Type: Array of [UsageResourceResult](#) objects

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# UsageTopAccountResult

Contains information on the total of usage based on the topmost 50 account IDs.

## Contents

### accountId

The unique account ID.

Type: String

Length Constraints: Fixed length of 12.

Required: No

### total

Contains the total usage with the corresponding currency unit for that value.

Type: [Total](#) object

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# UsageTopAccountsResult

Information about the usage statistics, calculated by top accounts by feature.

## Contents

### accounts

The accounts that contributed to the total usage cost.

Type: Array of [UsageTopAccountResult](#) objects

Required: No

### feature

Features by which you can generate the usage statistics.

RDS\_LOGIN\_EVENTS is currently not supported with topAccountsByFeature.

Type: String

Valid Values: FLOW\_LOGS | CLOUD\_TRAIL | DNS\_LOGS | S3\_DATA\_EVENTS  
| EKS\_AUDIT\_LOGS | EBS\_MALWARE\_PROTECTION | RDS\_LOGIN\_EVENTS  
| LAMBDA\_NETWORK\_LOGS | EKS\_RUNTIME\_MONITORING |  
FARGATE\_RUNTIME\_MONITORING | EC2\_RUNTIME\_MONITORING |  
RDS\_DB\_I\_PROTECTION\_PROVISIONED | RDS\_DB\_I\_PROTECTION\_SERVERLESS

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# User

Contains information about the user involved in the attack sequence.

## Contents

### **name**

The name of the user.

Type: String

Required: Yes

### **type**

The type of the user.

Type: String

Required: Yes

### **uid**

The unique identifier of the user.

Type: String

Required: Yes

### **account**

Contains information about the AWS account.

Type: [Account](#) object

Required: No

### **credentialUid**

The credentials of the user ID.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# Volume

Volume used by the Kubernetes workload.

## Contents

### hostPath

Represents a pre-existing file or directory on the host machine that the volume maps to.

Type: [HostPath](#) object

Required: No

### name

Volume name.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# VolumeDetail

Contains EBS volume details.

## Contents

### deviceName

The device name for the EBS volume.

Type: String

Required: No

### encryptionType

EBS volume encryption type.

Type: String

Required: No

### kmsKeyArn

KMS key ARN used to encrypt the EBS volume.

Type: String

Required: No

### snapshotArn

Snapshot ARN of the EBS volume.

Type: String

Required: No

### volumeArn

EBS volume ARN information.

Type: String

Required: No

**volumeSizeInGB**

EBS volume size in GB.

Type: Integer

Required: No

**volumeType**

The EBS volume type.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# VolumeMount

Container volume mount.

## Contents

### mountPath

Volume mount path.

Type: String

Required: No

### name

Volume mount name.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# VpcConfig

Amazon Virtual Private Cloud configuration details associated with your Lambda function.

## Contents

### securityGroups

The identifier of the security group attached to the Lambda function.

Type: Array of [SecurityGroup](#) objects

Required: No

### subnetIds

The identifiers of the subnets that are associated with your Lambda function.

Type: Array of strings

Required: No

### vpcId

The identifier of the Amazon Virtual Private Cloud.

Type: String

Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)

# Common Parameters

The following list contains the parameters that all actions use for signing Signature Version 4 requests with a query string. Any action-specific parameters are listed in the topic for that action. For more information about Signature Version 4, see [Signing AWS API requests in the IAM User Guide](#).

## Action

The action to be performed.

Type: string

Required: Yes

## Version

The API version that the request is written for, expressed in the format YYYY-MM-DD.

Type: string

Required: Yes

## X-Amz-Algorithm

The hash algorithm that you used to create the request signature.

Condition: Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.

Type: string

Valid Values: AWS4-HMAC-SHA256

Required: Conditional

## X-Amz-Credential

The credential scope value, which is a string that includes your access key, the date, the region you are targeting, the service you are requesting, and a termination string ("aws4\_request").

The value is expressed in the following format: *access\_key/YYYYMMDD/region/service/aws4\_request*.

For more information, see [Create a signed AWS API request](#) in the *IAM User Guide*.

**Condition:** Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.

Type: string

Required: Conditional

#### X-Amz-Date

The date that is used to create the signature. The format must be ISO 8601 basic format (YYYYMMDD'T'HHMMSS'Z'). For example, the following date time is a valid X-Amz-Date value: 20120325T120000Z.

**Condition:** X-Amz-Date is optional for all requests; it can be used to override the date used for signing requests. If the Date header is specified in the ISO 8601 basic format, X-Amz-Date is not required. When X-Amz-Date is used, it always overrides the value of the Date header. For more information, see [Elements of an AWS API request signature](#) in the *IAM User Guide*.

Type: string

Required: Conditional

#### X-Amz-Security-Token

The temporary security token that was obtained through a call to AWS Security Token Service (AWS STS). For a list of services that support temporary security credentials from AWS STS, see [AWS services that work with IAM](#) in the *IAM User Guide*.

**Condition:** If you're using temporary security credentials from AWS STS, you must include the security token.

Type: string

Required: Conditional

#### X-Amz-Signature

Specifies the hex-encoded signature that was calculated from the string to sign and the derived signing key.

**Condition:** Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.

Type: string

Required: Conditional

### X-Amz-SignedHeaders

Specifies all the HTTP headers that were included as part of the canonical request. For more information about specifying signed headers, see [Create a signed AWS API request](#) in the *IAM User Guide*.

Condition: Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.

Type: string

Required: Conditional

# Common Errors

This section lists the errors common to the API actions of all AWS services. For errors specific to an API action for this service, see the topic for that API action.

## **AccessDeniedException**

You do not have sufficient access to perform this action.

HTTP Status Code: 403

## **ExpiredTokenException**

The security token included in the request is expired

HTTP Status Code: 403

## **IncompleteSignature**

The request signature does not conform to AWS standards.

HTTP Status Code: 403

## **InternalFailure**

The request processing has failed because of an unknown error, exception or failure.

HTTP Status Code: 500

## **MalformedHttpRequestException**

Problems with the request at the HTTP level, e.g. we can't decompress the body according to the decompression algorithm specified by the content-encoding.

HTTP Status Code: 400

## **NotAuthorized**

You do not have permission to perform this action.

HTTP Status Code: 401

## **OptInRequired**

The AWS access key ID needs a subscription for the service.

HTTP Status Code: 403

### **RequestAbortedException**

Convenient exception that can be used when a request is aborted before a reply is sent back (e.g. client closed connection).

HTTP Status Code: 400

### **RequestEntityTooLargeException**

Problems with the request at the HTTP level. The request entity is too large.

HTTP Status Code: 413

### **RequestExpired**

The request reached the service more than 15 minutes after the date stamp on the request or more than 15 minutes after the request expiration date (such as for pre-signed URLs), or the date stamp on the request is more than 15 minutes in the future.

HTTP Status Code: 400

### **RequestTimeoutException**

Problems with the request at the HTTP level. Reading the Request timed out.

HTTP Status Code: 408

### **ServiceUnavailable**

The request has failed due to a temporary failure of the server.

HTTP Status Code: 503

### **ThrottlingException**

The request was denied due to request throttling.

HTTP Status Code: 400

### **UnrecognizedClientException**

The X.509 certificate or AWS access key ID provided does not exist in our records.

HTTP Status Code: 403

## **UnknownOperationException**

The action or operation requested is invalid. Verify that the action is typed correctly.

HTTP Status Code: 404

## **ValidationException**

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400
